IMPORTANT PRECAUTIONS

WARNING: To reduce the risk of serious injury, read the following important precautions before using the home gym system.

1. Read all instructions in this user's manual and in the accompanying literature before using the weight system.
2. Use the weight system only on a level surface. Cover the floor beneath the weight system for protection.
3. Inspect and tighten all parts each time you use the weight system. Replace any worn parts immediately.
4. Keep children under 12 away from the weight system at all times.
5. Inspect all cables before each use. Make sure that the cables remain on the pulleys at all times. If the cables bind whilst you are exercising, stop immediately and make sure that the cables are on all of the pulleys. Replace all cables every two years.
6. Keep hands and feet away from moving parts.
7. Always wear athletic shoes for foot protection.
8. Never release the press arms, leg lever, lat bar or nylon strap whilst weights are raised. The weights will fall with great force.
9. Always stand on a foot plate when performing an exercise that could cause the weight system to tip.
10. Always disconnect the lat bar from the weight system when performing an exercise that does not use the lat bar.
11. The resistance cylinders become very hot during use. Allow the cylinders to cool before touching them.
12. If you feel pain or dizziness at any time whilst exercising, stop immediately and begin cooling down.
13. The weight system is intended for in-home use only. Do not use this treadmill in any commercial, rental, or institutional setting.

WARNING: Before beginning this or any exercise program, consult your physician. This is especially important for persons over the age of 35 or persons with pre-existing health problems. Read all instructions before using. ICON assumes no responsibility for personal injury or property damage sustained by or through the use of this product.

CABLE DIAGRAM

The cable diagram below shows the proper routing of the Short Cable (23) and the Long Cable (66). Use the diagram to make sure that the two cables are assembled correctly. The letters show the routing of the Short Cable (23); the numbers show the routing of the Long Cable (66).

TROUBLE-SHOOTING AND MAINTENANCE

Inspect and tighten all parts each time you use the weight system. Replace any worn parts immediately. The weight system can be cleaned using a damp cloth and mild non-abrasive detergent. Do not use solvents.

TIGHTENING THE CABLES

Woven cable, the type of cable used on the weight system, can stretch slightly when it is first used. If there is slack in the cables before resistance is felt, the cables should be tightened. Locate the adjustment sleeve and adjustment screw near the lower end of the Short Cable (23). Loosen the adjustment screw. Pull the end of the Short Cable until there is no slack. Slide the adjustment sleeve and the ball against the indicated 3 1/2" Pulley (15). Retighten the adjustment screw. Make sure that the cables are not too tight, or the top weight will be lifted off the weight stack.

Additional slack can be removed by locating the indicated 5/16" Nylon Locknut (3) near the upper end of the Front Upright (42). To tighten the cables, hold the 5/16" x 3 1/4" Bolt (35) and turn the Nylon Locknut clockwise.

Note: Inspect all cables before each use. If a cable tends to slip off the pulleys often, the cable may have become twisted. Remove the cable and re-install it.

If the cables need to be replaced, see ORDERING REPLACEMENT PARTS on the back cover of this manual. **Replace all cables every two years.**

ADJUSTMENT

The instructions below describe how each part of the weight system can be adjusted. **IMPORTANT: When attaching the lat bar or nylon strap, make sure that the attachments are in the correct starting position for the exercise to be performed. If there is any slack in the cable or chain as an exercise is performed, the effectiveness of the exercise will be reduced.**

CHANGING THE WEIGHT SETTING

To change the weight setting, insert the Weight Pin (26) under one of the Weights (25). Make sure to insert the Weight Pin until the bent end of the Weight Pin is touching the Weights, and turn the bent end downward. The weight setting can be changed from 12.5 pounds to 125 pounds, in increments of 12.5 pounds. **Note: Due to the cables and pulleys, the actual amount of resistance at each exercise station will vary from the weight setting. Refer to the Weight Resistance Chart on page 17 to find the actual amount of resistance at each station.**

Note: 1 kg = 2,2 pounds

SWITCHING THE ARMS TO THE PRESS MODE OR THE BUTTERFLY MODE
