	FM Radio	Go back to radio list	
	Media Serv.	Go back to song list	
	MP3 Player	Go back to song list	

### Hardware & Software Installation

#### Hardware Installation:

Please fasten the wireless antenna and the FM antenna to appropriate antenna connectors at the rear panel of the device. If you prefer to use Ethernet for wired network connection, please plug in your Ethernet cable to the LAN (RJ45) port.

Please plug in the DC power adapter to the outlet and the DC power jack carefully.

To operate the device, you can use both the supplied remote control and also the keypad buttons.

#### Software Installation:

AIRMM01F can work as a stand-alone device or as a media streamer of a media server. As a stand-alone unit, you can use it to listen to Internet radio, FM Radio and external USB storage/MP3 players. No computer is needed.

For digital music files that are stored in your computer, you need to install streaming server software in the computer so that AIRMM01F can request the streaming service from that server.

AIRMM01F is compliant to UPnP protocol. It works with media server software such as Microsoft Windows Media Player 11 (WMP11), Microsoft Media Connect 2.0 (WMC2.0), and Music-match Jukebox. Once you have the software installed on the computer, you can stream your music collection to AIREC01F.

Please find Appendix A and B in the manual for instructions on how to connect AIREC01F to your computer via WMP11, and WMC2.0.

### Configure as a Wireless Client

The factory default mode is the wireless client code. According to the availability of an Ethernet cable, the device will automatically select a suitable client mode to operate. User can also manually change the setting of network configuration through the Setup menu "Setup/Advanced Setup/Configure Network".

AIRMM01F will connect wirelessly if it detects an 802.11b/g wireless network. With no Ethernet cable attached, you just need to power on the device and AIRMM01F will automatically enter the wireless client mode.

To connect AIRMM01F to the wireless network for the first time, you will need to set the encryption key for a secured network. Once the setting is finished, the device will remember the related settings and try to connect to the designated AP when it is power on next time. However, if there is something trouble in connecting to the designated AP, the device will show the AP list screen for you to configure again

#### First time using device without an Ethernet cable plugged in:

Instructions	Screenshot	Go to next screen	Notes
1. <b>POWER ON</b>			
2.			Device is running as a Wireless Client.
3.			Scanning for available APs.

### Configure as a Wired Client

If there is no 802.11b/g wireless network, AIRMM01F can also connect to the wired network through an Ethernet cable.

For this case, prior to power on the device, you have to plug in the Ethernet cable into the LAN (RJ45) connector on the back of the unit. After you power on the device, it will automatically go into the wired client mode when it detects a link status through the Ethernet connection.

#### First time using device with an Ethernet cable plugged in:

Instructions	Screenshot	Go to next screen	Notes
1. <b>POWER ON</b>			
2.			Device is running as a Wired Client.
3.			The device is in wired client mode now. It already connected to your network.

### Listen to Internet Radio

To listen to music or broadcast programs from Internet radio stations, please select the "Internet Radio" function from the main menu and then press the OK button to enter the Internet Radio function.

The first screen of Internet Radio function shows 2 items for you to select:

"Station List": Retrieve the Internet radio station lists from the Internet portal server.

"Favorite Stations": Retrieve the favorite station lists that stored in the device.

Press "OK" button or "▶" button to retrieve the Station List. The device will try to connect to the Internet radio server to retrieve the Internet radio stations for further playback, you will see the following screen:

It takes few seconds to get the latest list from Internet. And you will see the next screen.

This means the AIRMM01F is connected to the Internet server and received the information from the server.

If you see the following screen instead, it means that the device has encountered problem in retrieving the list from the internet server, please try again.

#### First time using device without an Ethernet cable plugged in (cont.):

Instructions	Screenshot	Go to next screen	Notes
4. "▼" button		"▶" button or "OK" button	Select the desired AP to connect
5. Numeric key pads		"OK" button	Type in the encryption key if the AP is encrypted.
6.		"OK" button	Set a proxy server if any.
7.		"OK" button	Confirm to the settings.
8.			Apply new settings.
