PHILIPS

1. Technical Specifications, Connections, and Chassis Overview

Index of this chapter:

Notes:

- Described specifications are valid for the *whole* product range.
- Figures below can deviate slightly from the actual situation, due to different set executions.

1.1 Technical Specifications

1.1.1 Reception

Display type	:	CRT-DV-SF
Screen size	:	29"; 4:3
	:	34"; 4:3
	:	28"; 16:9
	:	32"; 16:9
Tuning system	:	PLL
Color systems	:	NTSC M (3.58 - 4.5)
	:	PAL M
	:	PAL N
Sound systems	:	BTSC
Channel selections	:	181, full cable
IF picture carrier	:	45.75 MHz
Aerial input	:	75 ohm, F-type
A/V Connections	:	PAL B/G

1.1.2 Miscellaneous

Audio output:	:	2 x 10 W
Power supply:		
- Mains voltage range	:	100 - 250 V_{AC}
- Mains frequency	:	50 / 60 Hz
Ambient conditions:		
- Temperature range	:	+5 to +45 °C
- Maximum humidity	:	90% R.H.
Power consumption:		
- Normal operation	:	from 119 W
	:	to 133 W
- Standby	:	< 1 W

1.2 Connections

Note: The following connector color abbreviations are used (according to DIN/IEC 757): Bk= Black, Bu= Blue, Gn= Green, Gy= Grey, Rd= Red, Wh= White, Ye= Yellow.

1.2.1 Top Control and Front / Side Connections

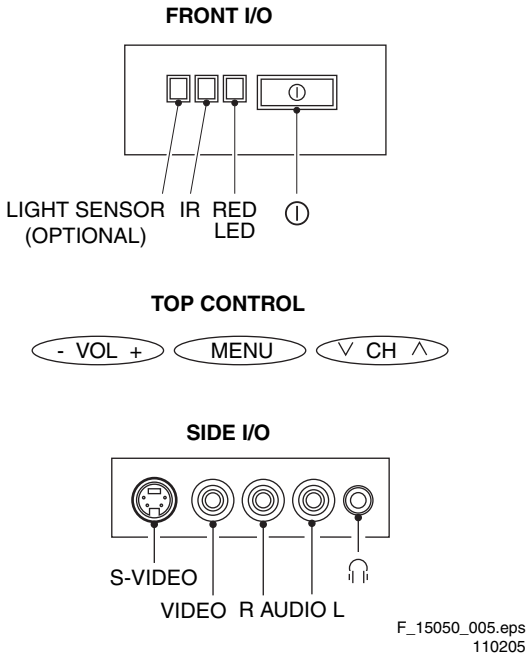

Figure 1-1 Top control and Front / Side connections

Hosiden: S-Video In

1	- GND	Ground
2	- GND	Ground
3	- Y	1 V_{PP} / 75 ohm
4	- C	0.3 V_{PP} / 75 ohm

Audio / Video In

Ye	- Video (CVBS)	1 V_{PP} / 75 ohm
Wh	- Audio - L	0.2 V_{RMS} / 10 kohm
Rd	- Audio - R	0.2 V_{RMS} / 10 kohm
Bk	- Headphone	8 - 600 Ohm / 4 mW

1.2.2 Rear Connections

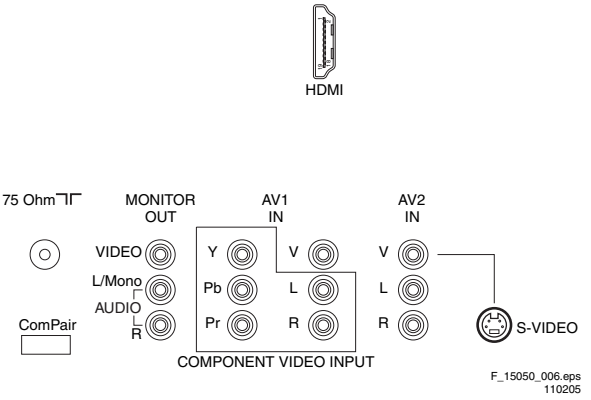

Figure 1-2 Rear connections

Aerial In

- F-type	Coax, 75 ohm	

Monitor Out

Ye - Video (CVBS)	1 V_{PP} / 75 ohm	
Wh - Audio - L	0.5 V_{RMS} / 1 kohm	
Rd - Audio - R	0.5 V_{RMS} / 1 kohm	

YUV In

Bu - U	0.7 V_{PP} / 75 ohm	
Rd - V	0.7 V_{PP} / 75 ohm	
Gn - Y	0.7 V_{PP} / 75 ohm	

AV1 In

Ye - Video (CVBS)	1 V_{PP} / 75 ohm	
Wh - Audio - L	0.5 V_{RMS} / 10 kohm	
Rd - Audio - R	0.5 V_{RMS} / 10 kohm	

AV2 In

Ye - Video (CVBS)	1 V_{PP} / 75 ohm	
Wh - Audio - L	0.5 V_{RMS} / 10 kohm	
Rd - Audio - R	0.5 V_{RMS} / 10 kohm	

AV2 In (S-Video)

1 - Ground	GND	

1.3 Chassis Overview

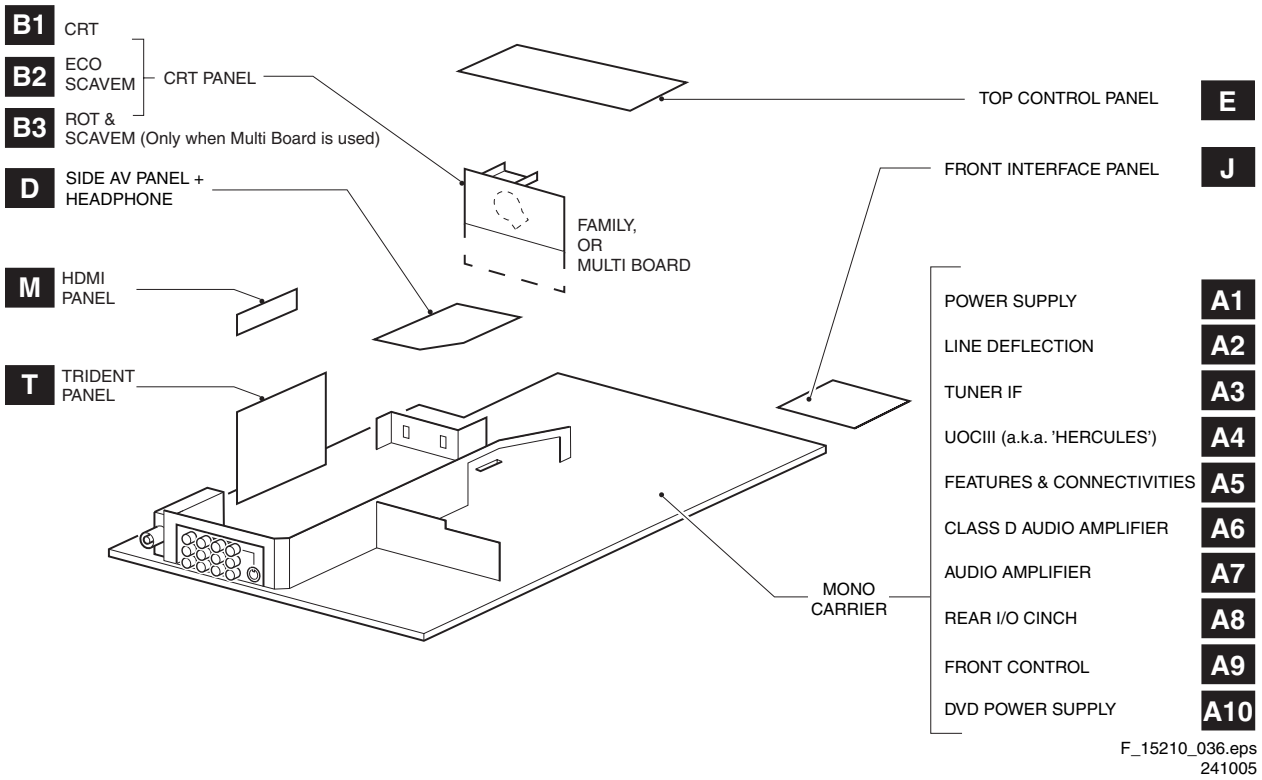

Figure 1-3 PWB location

4. Mechanical Instructions

Index of this chapter:

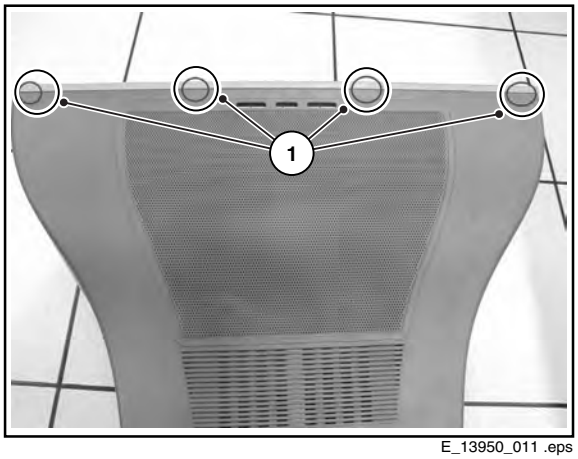
Note: Figures below can deviate slightly from the actual situation, due to different set executions.

4.1 Set Disassembly

Warning: Be sure to disconnect the AC power from the set before opening it.

4.1.1 Rear Cover

1. Remove all screws. If you do not remove them, you cannot access the clips.
2. Tilt the set a little forward, so that you can release the two clickfit clamps that are located at the bottom plate of the set.
3. Four openings (1) can be found at the top. The openings are very small (2).
   Note: Some sets only have the two inner openings.
4. Underneath every opening there is a clip. Push this clip down with a very thin piece of metal (3), until you hear a click.
   Caution: do **not** use a screwdriver, this will damage the cabinet.
5. When all four clips are pushed down, the back cover can be removed.



E_13950_011 .eps
050404

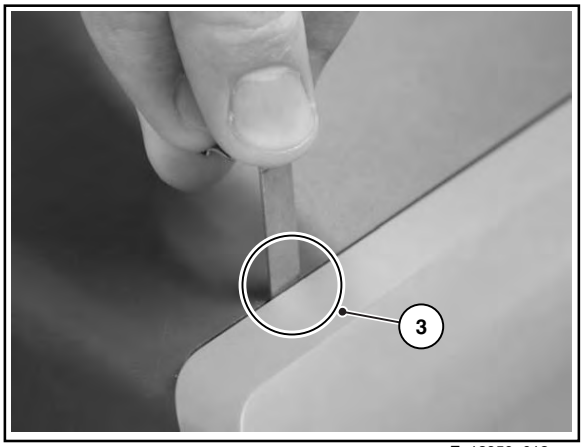
050404

Figure 4-2 Opening

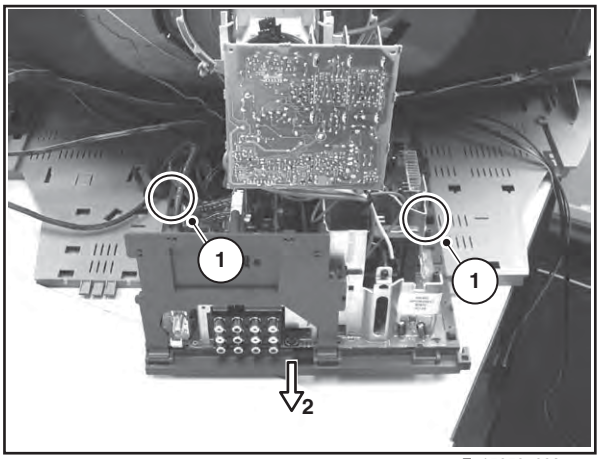


E_13950_013.eps
050404

Figure 4-3 Pushing clips down

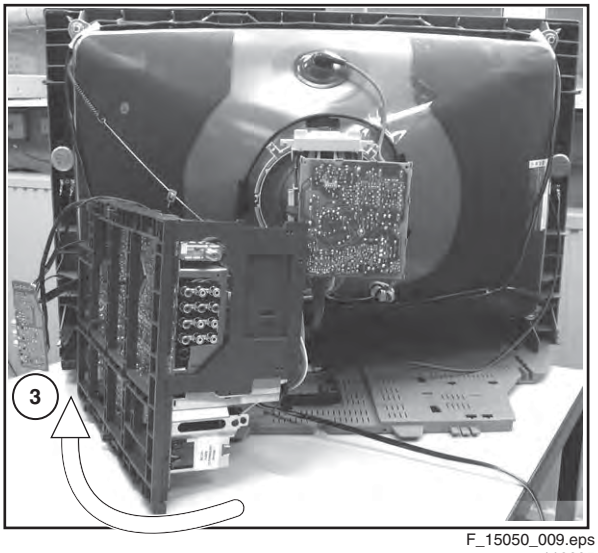
4.2 Service Position

Before placing the Mono Carrier in its service position, remove the Front Interface assy/panel (see paragraph “Front Interface Assy/Panel”) and the Side AV assy/panel (see paragraph “Side AV Assy/Panel”).



F_15050_008.eps
110205

Figure 4-4 Mono Carrier



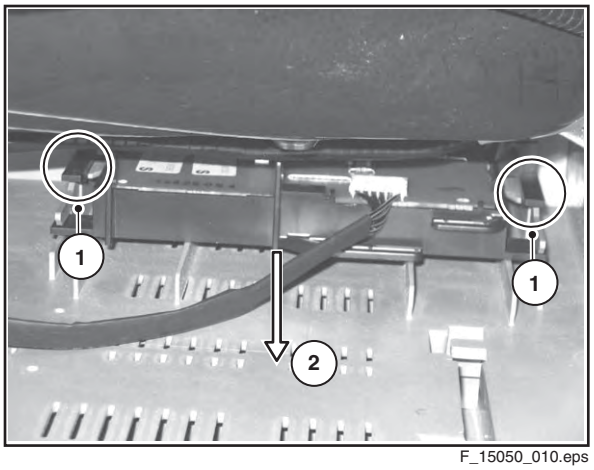
F_15050_009.eps
110205

Figure 4-5 Service position Mono Carrier

1. Disconnect the degaussing coil.
2. Release the two fixation clamps [1] (at the mid left and mid right side of the bracket), and remove the bracket from the bottom tray, by pulling it backwards [2].
3. Move the panel bracket somewhat to the left and flip it 90 degrees [3], with the components towards the CRT.
4. Turn the panel bracket with the rear I/O toward the CRT.

4.3 Assy/Panel Removal

4.3.1 Front Interface Assy/Panel



F_15050_010.eps
110205

Figure 4-6 Front interface assy/panel removal

1. Remove the two fixation screws.
2. Remove the complete module from the bottom plate, by pulling the two fixation clamps upward [1], while sliding the module away from the CRT [2].
3. Release the two fixation clamps at the side of the bracket, and lift the panel out of the bracket (it hinges at one side).

4.3.2 Side AV Assy/Panel

1. Remove the fixation screw, and remove the complete Side AV assembly.
2. Release the two fixation clamps, and lift the panel out of the bracket.

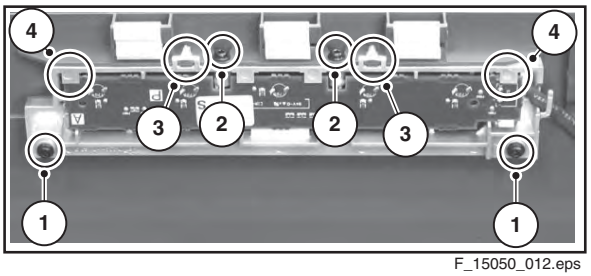
4.3.3 HDMI Interface Panel

To remove the HDMI Interface panel from the Mono Carrier, unscrew the fixation screw at the back of the assy.

4.3.4 Trident Panel

1. Remove all cables.
2. Pull the panel upwards out of the connectors.

4.3.5 Top Control Assy/Panel



F_15050_012.eps
110205

Figure 4-7 Top Control assy/panel removal

1. Remove the two fixation screws at the bottom [1] and the two fixation screws at the front of the assy [2].
2. Release the two fixation clamps [3] to lift out the assy.
3. Release the two fixation clamps [4] to lift the panel out of the assy.

4.4 Set Re-assembly

To re-assemble the whole set, do all processes in reverse order.

Note: before you mount the rear cover, perform the following checks:

- Check whether the AC power cord is mounted correctly in its guiding brackets.
- Check whether all cables are replaced in their original position

5. Service Modes, Error Codes, and Fault Finding

Index of this chapter:

5.1 Test Points

This chassis is equipped with test points in the service printing. In the schematics test points are identified with a rectangle box around Fxxx or Ixxx. These test points are specifically mentioned in the “Test Point Overview” as “half moons” with a dot in the center.

Table 5-1 Test point overview

Test point	Circuit	Diagr.
F508, F535, F536, F537, F552, F561, F563, F573, F664, I513, I518, I519, I524, I531, I533, I546	Power supply	A1
F401, F412, F413, F414, F418, F452, F453, F455, F456, F458, F459, F460, F461, I408, I416, I417, I420, I462, I468	Line & Frame Deflection	A2
F003, F004, I001, I002	Tuner IF	A3
F201, F203, F205, F206	UOCIII	A4
F240, F241, F242	Features & Connectivities	A5
F952, F955, I951, I952	Audio Amplifier	A7
F692	Front Control	A9
F331, F332, F333, F338, F339, F341, F351, F353, F354	CRT Panel	B1
F361, F362, F381, F382	ECO Scavem	B2

Perform measurements under the following conditions:
- Television set in Service Default Alignment Mode.
- Video input: Color bar signal.
- Audio input: 3 kHz left channel, 1 kHz right channel.

5.2 Service Modes

Service Default mode (SDM) and Service Alignment Mode (SAM) offers several features for the service technician, while the Customer Service Mode (CSM) is used for communication between the call center and the customer.

This chassis also offers the option of using ComPair, a hardware interface between a computer and the TV chassis. It offers the abilities of structured troubleshooting, error code reading, and software version readout for all chassis.
Minimum requirements for ComPair: a Pentium processor, a Windows OS, and a CD-ROM drive (see also paragraph "ComPair").

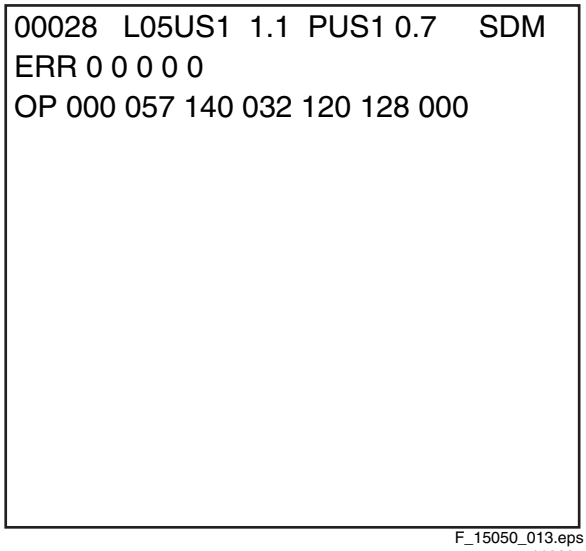
5.2.1 Service Default Mode (SDM)

Purpose
- To create a predefined setting for measurements to be made.
- To override software protections.
- To start the blinking LED procedure.

Specifications
- Tuning frequency: 61.25 MHz (channel 3).
- Color system: PAL M.
- All picture settings at 50% (brightness, color contrast, hue).
- Bass, treble and balance at 50 %; volume at 25 %.
- All service-unfriendly modes (if present) are disabled. The service unfriendly modes are:
  – Timer / Sleep timer.
  – Child / parental lock.
  – Blue mute.
  – Hotel / hospital mode.
  – Auto shut off (when no “IDENT” video signal is received for 15 minutes).
  – Skipping of non-favorite presets / channels.
  – Auto-storage of personal presets.
  – Auto user menu time-out.
  – Auto Volume Leveling (AVL).

How to Enter
To enter SDM, use one of the following methods:
- Press the following key sequence on the remote control transmitter: “**062596**” directly followed by the MENU button (do not allow the display to time out between entries while keying the sequence).
- Short the jumper wire 9252 with a cold ground on the family board (for example the tuner casing) and apply AC power. Then press the power button (remove the short after start-up).
  Caution: Entering SDM by shorting wire 9252 with ground will override the +8V-protection. Do this only for a short period. When doing this, the service-technician must know exactly what he is doing, as it could damage the television set.
- Or via ComPair.

After entering SDM, the following screen is visible, with SDM in the upper right corner of the screen to indicate that the television is in Service Default Mode.



F_15050_013.eps
110205

Figure 5-1 SDM menu

How to Navigate

Use one of the following methods:

- When you press the MENU button on the remote control, the set will switch on the normal user menu in the SDM mode.
- On the TV, press and hold the VOLUME DOWN and press the CHANNEL DOWN for a few seconds, to switch from SDM to SAM and reverse.

How to Exit

Switch the set to STANDBY by pressing the POWER button on the remote control transmitter or the television set.
If you turn the television set off by removing the AC power (i.e., unplugging the television) without using the POWER button, the television set will remain in SDM when AC power is re-applied, and the error buffer is not cleared.

5.2.2 Service Alignment Mode (SAM)

Purpose

- To change option settings.
- To display / clear the error code buffer.
- To perform alignments.

Specifications

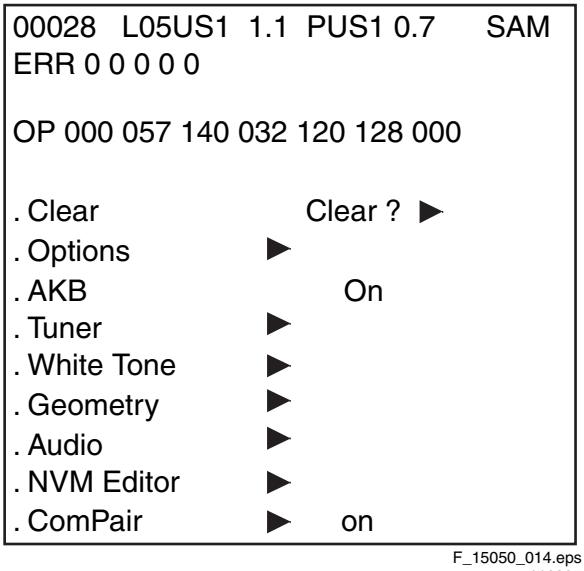
- Operation hours counter (maximum five digits displayed).
- Software version, Error codes, and Option settings display.
- Error buffer clearing.
- Option settings.
- AKB switching.
- Software alignments (Tuner, White Tone, Geometry & Audio).
- NVM Editor.
- ComPair Mode switching.

How to Enter

To enter SAM, use one of the following methods:

- Press the following key sequence on the remote control transmitter: "**062596**" directly followed by the OSD/ STATUS button (do not allow the display to time out between entries while keying the sequence).
- Or via ComPair.

After entering SAM, the following screen is visible, with SAM in the upper right corner of the screen to indicate that the television is in Service Alignment Mode.



F_15050_014.eps
110205

Figure 5-2 SAM menu

Menu Explanation

1. **LLLLL.** This represents the run timer. The run timer counts normal operation hours, but does not count standby hours.
2. **AAABCD-x.y.** This is the software identification of the main microprocessor:
   - **A**= the project name (= L05).
   - **B**= the region: E= Europe, A= Asia Pacific, U= NAFTA, L= LATAM.
   - **C**= the software diversity:
     - **Europe:** T= 1 page TXT, F= Full TXT, V= Voice control.
     - **LATAM and NAFTA:** N= Stereo non-dBx, S= Stereo dBx.
     - **Asian Pacific:** T= TXT, N= non-TXT, C= NTSC.
     - **ALL regions:** M= mono, D= DVD, Q= Mk2.
   - **D**= the language cluster number.
   - **x**= the main software version number (updated with a major change that is incompatible with previous versions).
   - **y**= the sub software version number (updated with a minor change that is compatible with previous versions).
3. **EFFG-x.y.** This is the software identification of the Trident microprocessor.
   - **P**= indication of the Trident processor.
   - **FF**= the region: US=Nafta.
   - **G**= the language cluster number.
   - **x**= the main software version number (updated with a major change that is incompatible with previous versions).
   - **y**= the sub software version number (updated with a minor change that is compatible with previous versions).
4. **SAM.** Indication of the Service Alignment Mode.
5. **Error Buffer.** Shows all errors detected since the last time the buffer was erased. Five errors possible.
6. **Option Bytes.** Used to set the option bytes. See "Options" in the Alignments section for a detailed description. Seven codes are possible.
7. **Clear.** Erases the contents of the error buffer. Select the CLEAR menu item and press the MENU RIGHT key. The content of the error buffer is cleared.
8. **Options.** Used to set the option bits. See "Options" in the Alignments section for a detailed description.
9. **AKB.** Used to disable (Off) or enable (On) the "black current loop" (AKB= Auto Kine Bias).
10. **Tuner.** Used to align the tuner. See "Tuner" in the Alignments section for a detailed description.
11. **White Tone.** Used to align the white tone. See "White Tone" in the Alignments section for a detailed description.
12. **Geometry.** Used to align the geometry settings of the television. See "Geometry" in the Alignments section for a detailed description.
13. **Audio.** No audio alignment is necessary for this television set.
14. **NVM Editor.** Can be used to change the NVM data in the television set. See table "NVM data" further on.
15. **ComPair.** Can be used to switch on the television to In System Programming (ISP) mode, for software uploading via ComPair. **Caution:** When this mode is selected without ComPair connected, the TV will be blocked. Remove the AC power to reset the TV.

How to Navigate

- In SAM, select menu items with the MENU UP/DOWN keys on the remote control transmitter. The selected item will be highlighted. When not all menu items fit on the screen, use the MENU UP/DOWN keys to display the next / previous menu items.
- With the MENU LEFT/RIGHT keys, it is possible to:
  - Activate the selected menu item.
  - Change the value of the selected menu item.
  - Activate the selected submenu.
- In SAM, when you press the MENU button twice, the set will switch to the normal user menus (with the SAM mode

still active in the background). To return to the SAM menu press the MENU or STATUS/EXIT button.
- When you press the MENU key in while in a submenu, you will return to the previous menu.

How to Store SAM Settings
To store the settings changed in SAM mode, leave the top level SAM menu by using the POWER button on the remote control transmitter or the television set.

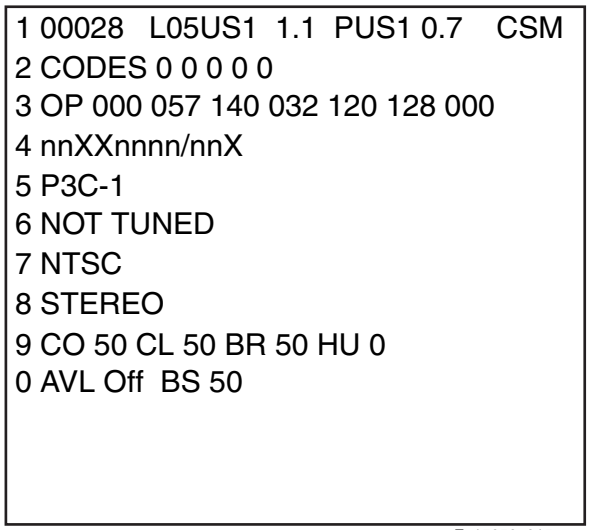
How to Exit
Switch the set to STANDBY by pressing the POWER button on the remote control transmitter or the television set.
If you turn the television set “off” by removing the AC power (i.e., unplugging the television) without using the POWER button, the television set will remain in SAM when AC power is re-applied, and the error buffer is not cleared.

5.2.3 Customer Service Mode (CSM)

Purpose
The Customer Service Mode shows error codes and information on the TV’s operation settings. The call center can instruct the customer (by telephone) to enter CSM in order to identify the status of the set. This helps the call center to diagnose problems and failures in the TV set before making a service call.
The CSM is a read-only mode; therefore, modifications are not possible in this mode.

How to Enter
To enter CSM, press the following key sequence on the remote control transmitter: “**123654”** (do not allow the display to time out between entries while keying the sequence).

Upon entering the Customer Service Mode, the following screen will appear:



F_15050_015.eps
140205

Figure 5-3 CSM menu

Menu Explanation
1. Indication of the decimal value of the operation hours counter, Software identification of the main and Trident microprocessor (see "Service Default or Alignment Mode" for an explanation), and the service mode (CSM= Customer Service Mode).
2. Displays the last five errors detected in the error code buffer.
3. Displays the option bytes.
4. Displays the type number version of the set.
5. Reserved item for P3C call centers.
6. Indicates the television is receiving an "IDENT" signal on the selected source. If no "IDENT" signal is detected, the display will read "NOT TUNED"
7. Displays the detected Color system (e.g. PAL/NTSC).
8. Displays the detected Audio (e.g. stereo/mono).
9. Displays the picture setting information.
10. Displays the sound setting information.

How to Exit
To exit CSM, use one of the following methods:
- Press the MENU, STATUS/EXIT, or POWER button on the remote control transmitter.
- Press the POWER button on the television set.

5.3 Problems and Solving Tips Related to CSM

5.3.1 Picture Problems

Note: The problems described below are all related to the TV settings. The procedures used to change the value (or status) of the different settings are described.

Picture too Dark or too Bright

If:
- The picture improves when you have press the AUTO PICTURE button on the remote control transmitter, or
- The picture improves when you enter the Customer Service Mode,

Then:
1. Press the AUTO PICTURE button on the remote control transmitter repeatedly (if necessary) to choose PERSONAL picture mode.
2. Press the MENU button on the remote control transmitter. This brings up the normal user menu.
3. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu.
4. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
5. Use the MENU UP/DOWN keys (if necessary) to select BRIGHTNESS.
6. Press the MENU LEFT/RIGHT keys to increase or decrease the BRIGHTNESS value.
7. Use the MENU UP/DOWN keys to select PICTURE.
8. Press the MENU LEFT/RIGHT keys to increase or decrease the PICTURE value.
9. Press the MENU button on the remote control transmitter twice to exit the user menu.
10. The new PERSONAL preference values are automatically stored.

White Line around Picture Elements and Text

If:
The picture improves after you have pressed the AUTO PICTURE button on the remote control transmitter,

Then:
1. Press the AUTO PICTURE button on the remote control transmitter repeatedly (if necessary) to choose PERSONAL picture mode.
2. Press the MENU button on the remote control transmitter. This brings up the normal user menu.
3. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu.
4. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
5. Use the MENU UP/DOWN keys to select SHARPNESS.
6. Press the MENU LEFT key to decrease the SHARPNESS value.

7. Press the MENU button on the remote control transmitter twice to exit the user menu.
8. The new PERSONAL preference value is automatically stored.

Snowy Picture

Check CSM line 6. If this line reads “Not Tuned”, check the following:

- Antenna not connected. Connect the antenna.
- No antenna signal or bad antenna signal. Connect a proper antenna signal.
- The tuner is faulty (in this case line 2, the Error Buffer line, will contain error number 10). Check the tuner and replace/ repair the tuner if necessary.

Black and White Picture

If:

- The picture improves after you have pressed the AUTO PICTURE button on the remote control transmitter,

Then:

1. Press the AUTO PICTURE button on the remote control transmitter repeatedly (if necessary) to choose PERSONAL picture mode.
2. Press the MENU button on the remote control transmitter. This brings up the normal user menu.
3. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu.
4. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
5. Use the MENU UP/DOWN keys to select COLOR.
6. Press the MENU RIGHT key to increase the COLOR value.
7. Press the MENU button on the remote control transmitter twice to exit the user menu.
8. The new PERSONAL preference value is automatically stored.

Menu Text not Sharp Enough

If:

- The picture improves after you have pressed the AUTO PICTURE button on the remote control transmitter,

Then:

1. Press the AUTO PICTURE button on the remote control transmitter repeatedly (if necessary) to choose PERSONAL picture mode.
2. Press the MENU button on the remote control transmitter. This brings up the normal user menu.
3. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu.
4. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
5. Use the MENU UP/DOWN keys to select PICTURE.
6. Press the MENU LEFT key to decrease the PICTURE value.
7. Press the MENU button on the remote control transmitter twice to exit the user menu.
8. The new PERSONAL preference value is automatically stored.

5.4 ComPair

5.4.1 Introduction

ComPair (Computer Aided Repair) is a service tool for Philips Consumer Electronics products. ComPair is a further development on the European DST (service remote control), which allows faster and more accurate diagnostics. ComPair has three big advantages:

- ComPair helps you to quickly get an understanding on how to repair the chassis in a short time by guiding you systematically through the repair procedures.
- ComPair allows very detailed diagnostics (on I2C level) and is therefore capable of accurately indicating problem areas. You do not have to know anything about I2C commands yourself because ComPair takes care of this.
- ComPair speeds up the repair time since it can automatically communicate with the chassis (when the microprocessor is working) and all repair information is directly available. When ComPair is installed together with the Force/SearchMan electronic manual of the defective chassis, schematics and PWBs are only a mouse click away.

5.4.2 Specifications

ComPair consists of a Windows based fault finding program and an interface box between PC and the (defective) product. The ComPair interface box is connected to the PC via a serial (or RS232) cable.
For this chassis, the ComPair interface box and the TV communicate via a bi-directional service cable via the service connector(s).

The ComPair fault finding program is able to determine the problem of the defective television. ComPair can gather diagnostic information in two ways:

- Automatic (by communication with the television): ComPair can automatically read out the contents of the entire error buffer. Diagnosis is done on I2C/UART level. ComPair can access the I2C/UART bus of the television. ComPair can send and receive I2C/UART commands to the micro controller of the television. In this way, it is possible for ComPair to communicate (read and write) to devices on the I2C/UART buses of the TV-set.
- Manually (by asking questions to you): Automatic diagnosis is only possible if the micro controller of the television is working correctly and only to a certain extend. When this is not the case, ComPair will guide you through the fault finding tree by asking you questions (e.g. *Does the screen give a picture? Click on the correct answer: YES / NO*) and showing you examples (e.g. *Measure test-point I7 and click on the correct oscillogram you see on the oscilloscope*). You can answer by clicking on a link (e.g. text or a waveform picture) that will bring you to the next step in the fault finding process.

By a combination of automatic diagnostics and an interactive question / answer procedure, ComPair will enable you to find most problems in a fast and effective way.

Beside fault finding, ComPair provides some **additional features** like:

- Up- or downloading of pre-sets.
- Managing of pre-set lists.
- Emulation of the (European) Dealer Service Tool (DST).
- If both ComPair and Force/SearchMan (Electronic Service Manual) are installed, all the schematics and the PWBs of the set are available by clicking on the appropriate hyperlink.
  Example: *Measure the DC-voltage on capacitor C2568 (Schematic/Panel) at the Mono-carrier.*
  – Click on the “Panel” hyperlink to automatically show the PWB with a highlighted capacitor C2568.
  – Click on the “Schematic” hyperlink to automatically show the position of the highlighted capacitor.

5.4.3 How to Connect

This is described in the chassis fault finding database in ComPair.

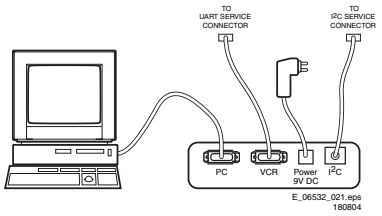


Figure 5-4 ComPair interface connection

5.4.4 How to Order

ComPair order codes (EU/AP/LATAM):
- Starter kit ComPair32/SearchMan32 software and ComPair interface (excl. transformer): 3122 785 90450.
- ComPair interface (excl. transformer): 4822 727 21631.
- Starter kit ComPair32 software (registration version): 3122 785 60040.
- Starter kit SearchMan32 software: 3122 785 60050.
- ComPair32 CD (update): 3122 785 60070 (year 2002), 3122 785 60110 (year 2003 onwards).
- SearchMan32 CD (update): 3122 785 60080 (year 2002), 3122 785 60120 (year 2003), 3122 785 60130 (year 2004).
- ComPair firmware upgrade IC: 3122 785 90510.
- Transformer (non-UK): 4822 727 21632.
- Transformer UK: 4822 727 21633.
- ComPair interface cable: 3122 785 90004.
- ComPair interface extension cable: 3139 131 03791.
- ComPair UART interface cable: 3122 785 90630

ComPair order codes (US):
- ComPair Software: ST4191.
- ComPair Interface Box: 4822 727 21631.
- AC Adapter: T405-ND.
- ComPair Quick Start Guide: ST4190.
- ComPair interface extension cable: 3139 131 03791.
- ComPair UART interface cable: 3122 785 90630

Note: If you encounter any problems, contact your local support desk.

5.5 Error Codes

The error code buffer contains all errors detected since the last time the buffer was erased. The buffer is written from left to right. When an error occurs that is not yet in the error code buffer, it is displayed at the left side and all other errors shift one position to the right.

5.5.1 How to Read the Error Buffer

You can read the error buffer in 3 ways:
- On screen via the SAM (if you have a picture). **Examples:**
  - ERROR: 0 0 0 0 0 : No errors detected
  - ERROR: 6 0 0 0 0 : Error code 6 is the last and only detected error
  - ERROR: 9 6 0 0 0 : Error code 6 was detected first and error code 9 is the last detected (newest) error
- Via the blinking LED procedure (when you have no picture). See “The Blinking LED Procedure”.
- Via ComPair.

5.5.2 How to Clear the Error Buffer

The error code buffer is cleared in the following cases:
- By using the CLEAR command in the SAM menu:
  - To enter SAM, press the following key sequence on the remote control transmitter: “**062596**” directly followed by the OSD/STATUS button (do not allow the display to time out between entries while keying the sequence).
  - Make sure the menu item CLEAR is highlighted. Use the MENU UP/DOWN buttons, if necessary.
  - Press the MENU RIGHT button to clear the error buffer. The text on the right side of the “CLEAR” line will change from “CLEAR?” to “CLEARED”
- If the contents of the error buffer have not changed for 50 hours, the error buffer resets automatically.

Note: If you exit SAM by disconnecting the AC power from the television set, the error buffer is not reset.

5.5.3 Error Codes

In case of non-intermittent faults, write down the errors present in the error buffer and clear the error buffer before you begin the repair. This ensures that old error codes are no longer present.

If possible, check the entire contents of the error buffer. In some situations, an error code is only the result of another error and not the actual cause of the problem (for example, a fault in the protection detection circuitry can also lead to a protection).

Table 5-2 Error code overview

Error	Device	Error description	Check item	Diagram
0	Not applicable	No Error		
1	Not applicable	X-Ray/Over-voltage protection (US only)	2411, 2412, 2413, 6404, 6411, 6412	A2
2	Not applicable	High beam (BCI) protection	3412, 7405	A2
3	Not applicable	Vertical guard protection	3466, 7451	A2
4	Not applicable	-	-	-
5	Not applicable	+5v protection	7604, 7605	A5
6	I2C bus	General I2C error	7200, 3207, 3214	A4
7	Not applicable	-	-	-
8	Not applicable	-	-	-
9	24C16	I2C error while communicating with the EEPROM	7601, 3604, 3605	A5
10	Tuner	I2C error while communicating with the PLL tuner	1000, 5001	A3
11	TDA6107/A	Black current loop instability protection	7330, 3351, CRT	B1
12	Not applicable	-	-	-
13	Not applicable	-	-	-
14	Not applicable	-	-	-
15	Not applicable	-	-	-
16	Not applicable	-	-	-
17	Not applicable	-	-	-
18	Not applicable	-	-	-
19	TDA1200x	I2C error while communicating with sound decoder in UOCIII IC	7200	A4
20	TDA1200x	I2C error while communicating with video cosmic in UOCIII IC	7200	A4
21	DPTVSVP	I2C error while communicating with the 3D Processor	7201, 3223, 3224	T1
22	TDA9332	I2C error while communicating with the HOP	7221, 3244, 3629, 7226, 7227	T5
23	SAA5565	I2C error while communicating with the Painter uProcessor	7206, 3254, 3256	T2
24	AD9883	I2C error while communicating with the ADC	7210, 3268, 3270	T3
25	Not applicable	No communication possible with Trident module	-	T
26	SII9993	I2C error while communicating with the HDMI receiver	7002, 3016, 3019	M1

5.6 The Blinking LED Procedure

Using this procedure, you can make the contents of the error buffer visible via the front LED. This is especially useful when there is no picture.

When the SDM is entered, the front LED will blink the contents of the error-buffer:
- When all the error-codes are displayed, the sequence finishes with a LED blink of 1.5 seconds,
- The sequence starts again.

Example of error buffer: **12 9 6 0 0**
After entering SDM, the following occurs:
- 1 long blink of 5 seconds to start the sequence,
- 12 short blinks followed by a pause of 1.5 seconds,
- 9 short blinks followed by a pause of 1.5 seconds,
- 6 short blinks followed by a pause of 1.5 seconds,
- 1 long blink of 1.5 seconds to finish the sequence,
- The sequence starts again at 12 short blinks.

5.7 Protections

If a fault situation is detected, an error code will be generated; and, if necessary, the television set will go into protection mode. Blinking of the red LED at a frequency of 3 Hz indicates the protection mode. In some error cases, the microprocessor does not put the set in protection mode. The error codes of the error buffer and the blinking LED procedure can be read via the Service Default Menu (SDM), or via ComPair.

To get a quick diagnosis the chassis has three service modes implemented:
- The Customer Service Mode (CSM).
- The Service Default Mode (SDM).
- The Service Alignment Mode (SAM).

For a detailed mode description, see the relevant sections.

5.8 Fault Finding and Repair Tips

Notes:
- It is assumed that the components are mounted correctly with correct values and no bad solder joints.
- Before any fault finding actions, check if the correct options are set.

5.8.1 NVM Editor

In some cases, it can be handy if one directly can change the NVM contents. This can be done with the “NVM Editor” in SAM mode. In the next table, the default NVM values are given.

Table 5-3 NVM default values for LATAM-region

Item	Address (dec)	Default values (hex)									
		32PW8422/78	34PT8422/78	34PT8422/77	32PW8422/77	32PW8422/44	29PT8422/78	29PT8422/77	29PT8422/44	28PW8422/78	28PW8422/77

5.8.2 Power Supply

Set Not Working

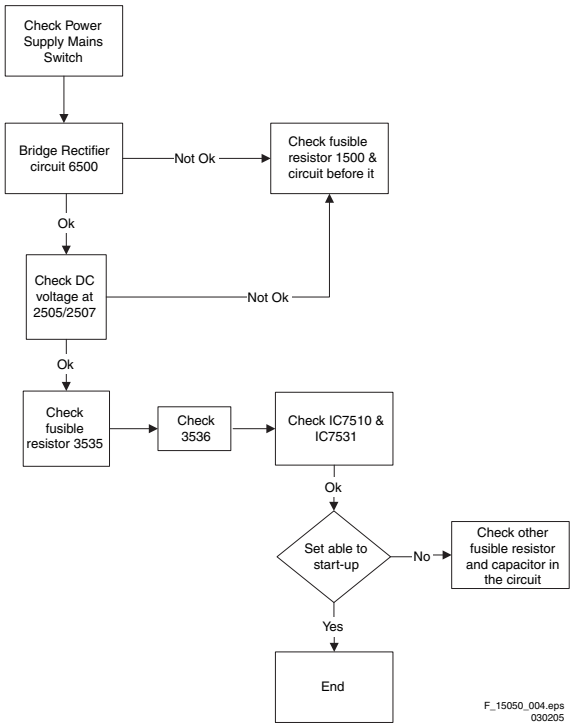

Figure 5-5 Fault finding tree "Set not working"

Set Does Not Start Up

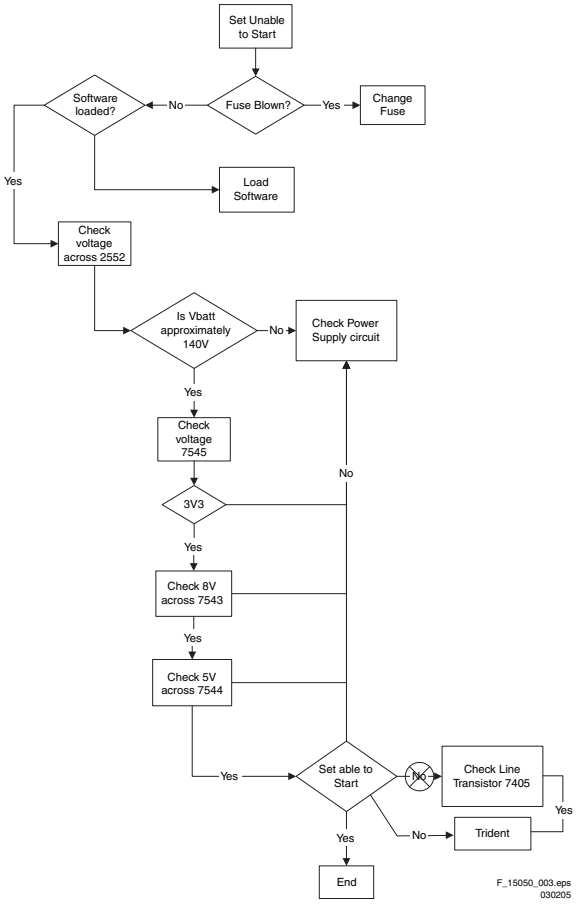

Figure 5-6 Fault finding tree "Set does not start up"

5.8.3 Deflection

One Thin Vertical Line

Quick check:

- Set in protection mode.
- LED blinking with error "3".

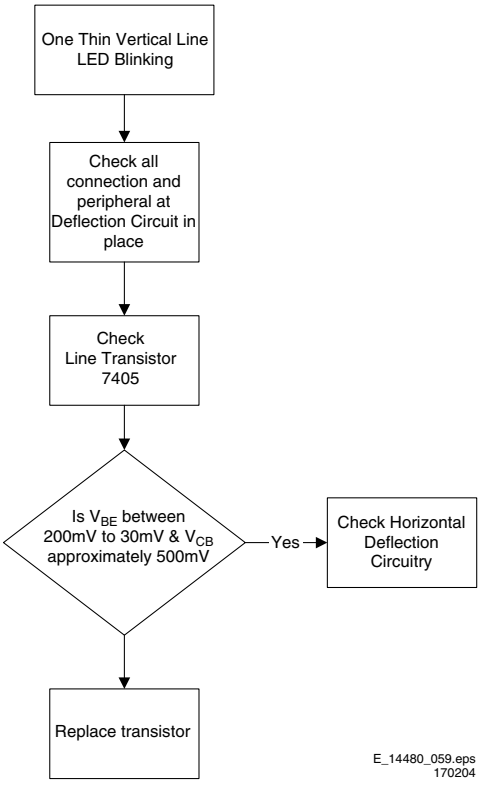

Figure 5-7 Fault finding tree "One thin vertical line"

One Thin Horizontal Line

Quick check:

- Set in protection mode.
- LED blinking with error "2".

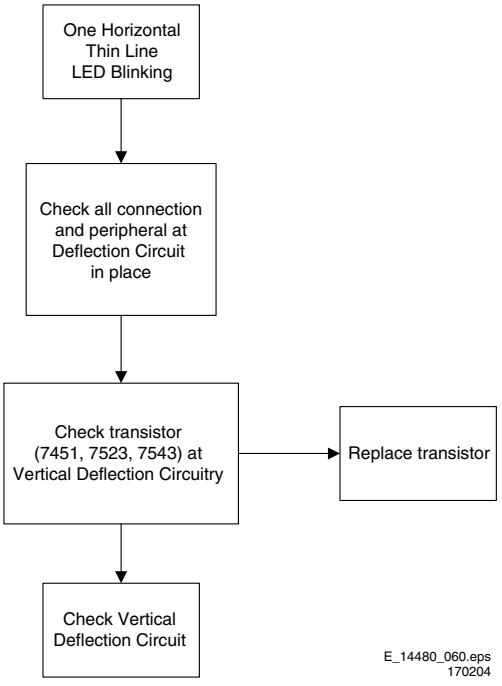

Figure 5-8 Fault finding tree "One thin horizontal line"

Blank Screen

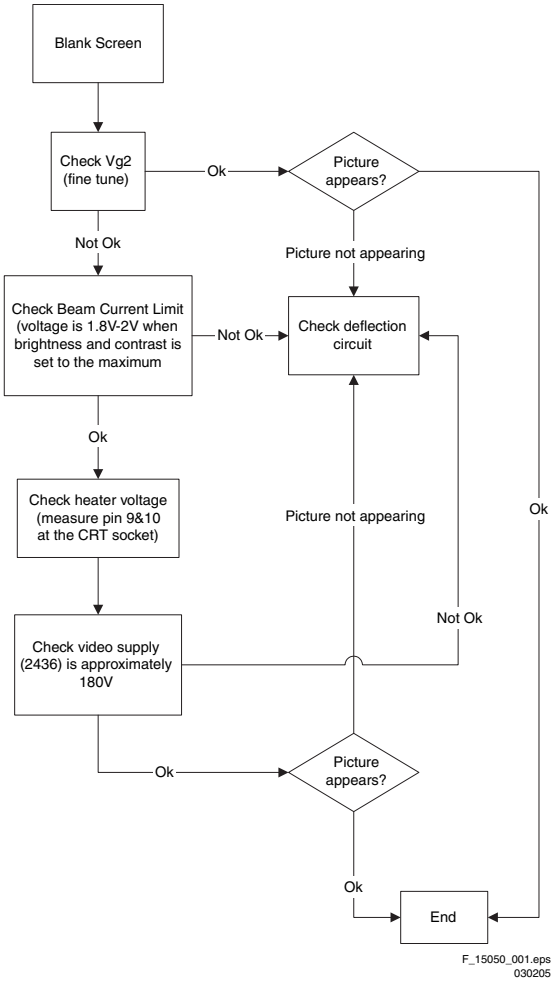

Figure 5-9 Fault finding tree "Blank screen"

5.8.4 Source Selection

Set is not able to go into AV or any missing AV is encountered

E.g. AV1 is available but not able to enter to AV1: Check if the option setting is correct.

Set is able to go to AV, but no audio is heard.

1. Check that continuity of signal is there from the SCART/ Cinch input to the input of the UOCIII.
2. If continuity is there and still no audio, check that option settings are correct.
3. If logic setting is correct and still no audio, proceed to Audio Decoder/Processor troubleshooting section.

Set is able to go into AV but no video is available:

1. Check continuity from AV input to UOCIII depending on the input.
2. If continuity is available and yet no video, proceed to Video Processor troubleshooting section.

5.8.5 Tuner and IF

No Picture

1. Check that the Option settings are correct.
2. If correct, check that supply voltages are there.
3. If supply voltages are present, check whether picture is present in AV.
4. If picture is present in AV, check with the scope the Tuner IF output signal by manual storage to a known channel.
5. If IF output is present, Tuner is working fine. If no IF output, I2C data lines may be open, check continuity of I2C lines. If I2C lines are ok, Tuner may be defect, replaced Tuner.
6. If Tuner IF is present and yet still no picture in RF mode, go to Video Processing troubleshooting section.

No Picture, No Sound

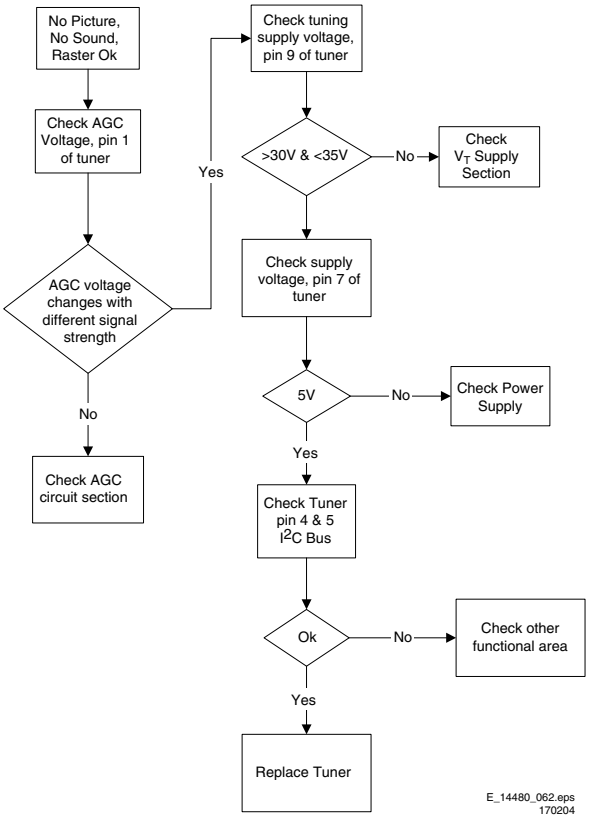

Figure 5-10 Fault finding tree "No picture, no sound"

Picture Ok, No Sound

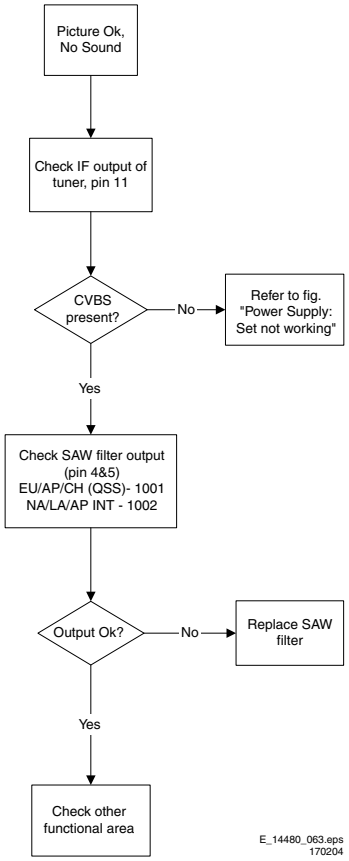

Figure 5-11 Fault finding tree "Picture ok, no sound"

Unable to Perform Tuning

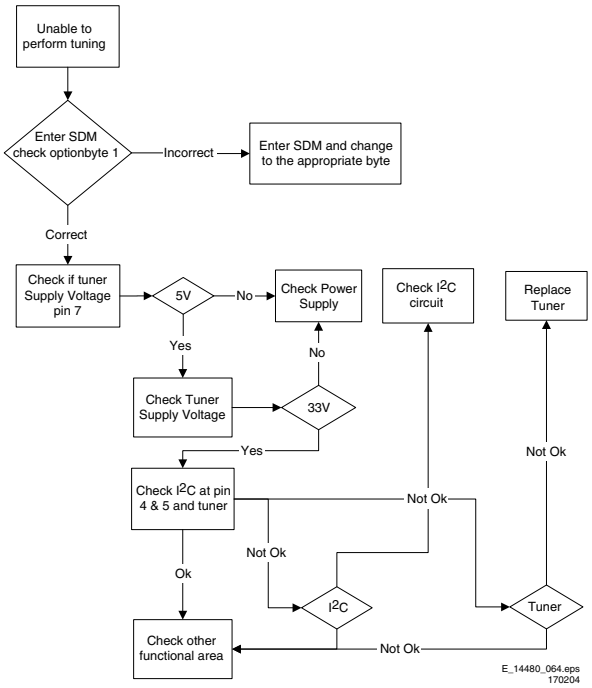

Figure 5-12 Fault finding tree "Unable to perform tuning"

5.8.6 Controller

Below are some guidelines for troubleshooting of the Micro Controller function. Normally Micro Controller should be checked when there is a problem of startup.

1. Check that both +3.3 V_{DC} and +1.8 V_{DC} are present.
2. Check that crystal oscillator is working.
3. Check that Power Good signal is at "high" logic, normal operation.
4. Check that UOCIII is not in standby mode. Pin 15 of UOCIII should be 0 V_{DC}.
5. Make sure H-drive pulse is there. This can be checked at resistor R3239. If H-drive does not exist, remove resistor R3239 to check if there is loading.

Note: When the set shuts down after a few second after power "on", the main cause is that Vg2 not aligned properly, try adjusting Vg2 during the few seconds of power "on".

5.8.7 Video Processing

No Picture

When "no picture in RF", first check if the microprocessor is functioning ok in section "Controller". If that is ok, follow the next steps.
When "no picture in AV", first check if the video source selection is functioning ok in section "Source Selection". If that is ok, follow the next steps.

1. Check that normal operating conditions are met.
2. Check that there is video signal at pin 81. If no video, demodulator part of the UOCIII is faulty, replace with new UOCIII.
3. If video signal is available at pin 81, check pin 56, 57, and 58 for the RGB signal.
4. If signal is not available, try checking the BRIGHTNESS and/or CONTRAST control, and make sure it is not at zero.
5. If still with the correct settings and no video is available, proceed to the CRT/RGB amplifier diagram.

For sets with TDA9178, follow steps below:

1. Put Option Byte 2 bit 4 to "0"; if video signal is not available, then check fault finding section "Controller", Section "Source Selection", and steps above.
2. If video is available but not correct, put Option Byte 2 bit 4 to "1", then check if LTI panel is present. If not, put LTI panel in the main chassis (connector 1221).
3. If LTI panel is in main chassis, check cable between LTI panel and main chassis (position is 1206). If it is connected, then the LTI panel is faulty, replace it.

5.8.8 Audio Processing

No Sound

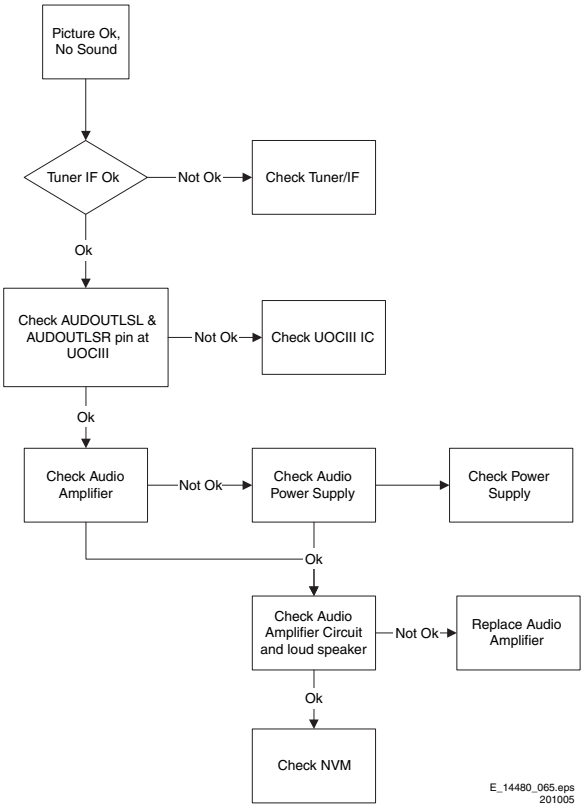

Figure 5-13 Fault finding tree "No sound"

No RF Audio for QSS/Inter-Carrier Stereo Sets.

1. Check pin 99 and 100 for SIF signal (for QSS) or pin 104 and 105 for video with SIF (for Inter-Carrier)
2. If signal is not present, check for the QSS/FMI bit settings. Check also the NVM data.
3. If signals are present and still no audio, check the audio supply voltage +8V are present.
4. If still no audio signal at UOCIII output, the UOCIII is faulty.

No AV Audio.

1. Check troubleshooting methods in section "Source Selection".
2. Check the output of the UOCIII to see if there is signal available. If no, check the normal operating condition and also the NVM data.
3. If still no audio signal at UOCIII output, the UOCIII is faulty.

Note: If there is audio signal at UOCIII output and no audio at loudspeaker, proceed to Audio Amplifier troubleshooting methods.

5.8.9 Audio Amplifier

No RF as well as AV Audio at the Loudspeaker:

1. Check that the normal operation condition of the amplifier is met.
2. If normal operation conditions are met, check the continuity from UOCIII output to input of the amplifier.
3. If continuity is there and still no audio, check speaker wire connections. If still no audio, amplifier IC might be faulty.

8. Alignments

Index of this chapter:

Note:

- The Service Default Mode (SDM) and Service Alignment Mode (SAM) are described in chapter 5 “Service Modes, ...”.
- Menu navigation is done with the CURSOR UP, DOWN, LEFT, or RIGHT keys of the remote control transmitter.

8.1 General Alignment Conditions

Perform all electrical adjustments under the following conditions:

- AC voltage and frequency (region dependent):
  - 120 V_{AC} / 60 Hz, or
  - 240 V_{AC} / 50 Hz.
- Connect the set to the AC power (a.k.a. Mains voltage) via an isolation transformer with a low internal resistance.
- Allow the set to warm up for approximately 20 minutes.
- Measure the voltages and waveforms in relation to chassis ground (with the exception of the voltages on the primary side of the power supply). Never use the cooling fins / plates as ground.
- Test probe: R_i > 10 Mohm; C_i < 2.5 pF.
- Use an isolated trimmer / screwdriver to perform the alignments.

8.2 Hardware Alignments

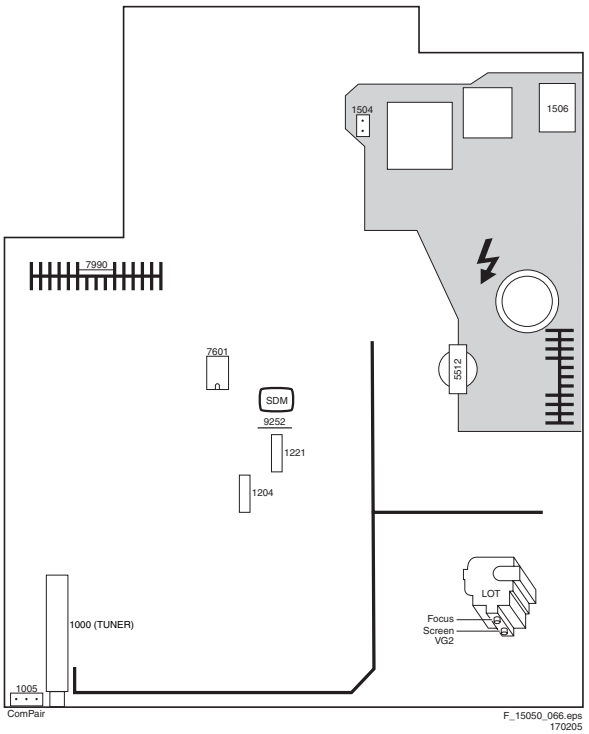

Figure 8-1 Top view family board

8.2.1 Vg2 Adjustment

1. Activate the SAM.
2. Go to the WHITE TONE sub menu.
3. Set the values of NORMAL RED, GREEN and BLUE to “32”.
4. Go, via the MENU key, to the normal user menu and set
5. SATURATION/COLOR to “0”.
6. CONTRAST to “0”.
7. BRIGHTNESS to minimum (OSD just visible).
8. Return to the SAM via the MENU key.
9. Connect the RF output of a pattern generator to the antenna input. Test pattern is a 'black' picture (blank screen on CRT without any OSD info) with a signal strength of 1 V_{PP}.
10. Set the channel of the oscilloscope to 50 V/div and the time base to 0.2 ms (external triggering on the vertical pulse). Ground the scope at the CRT panel and connect a 10:1 probe to one of the cathodes of the picture tube socket.
11. Measure the cut off pulse during first full line after the frame blanking (see figure “V_{CUTOFF} waveform”). You will see two pulses, one being the “cut off” pulse and the other being the “white drive” pulse. Choose the one with the lowest value; this is the “cut off” pulse.
12. Select the cathode with the highest V_{DC} value for the alignment. Adjust the V_{CUTOFF} of this gun with the SCREEN potentiometer (see figure “Top view family board”) on the LOT to 160 V_{DC}, except for the 25/28BLD picture tube (Black Line Display, for EU only); this tube must be aligned to 140 V_{DC}.
13. Restore BRIGHTNESS and CONTRAST to normal (= 31).

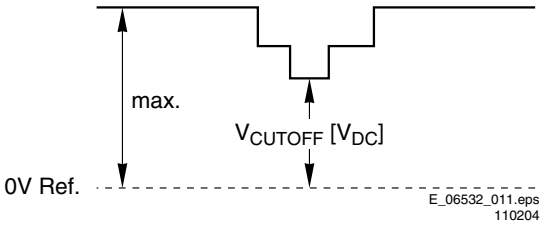

Figure 8-2 V_cutoff waveform

8.2.2 Focusing

1. Tune the set to a circle or crosshatch test pattern (use an external video pattern generator).
2. Choose picture mode NATURAL with the SMART PICTURE button on the remote control transmitter.
3. Adjust the FOCUS potentiometer (see figure “Top view family board”) until the vertical lines at 2/3 from east and west, at the height of the centerline, are of minimum width without visible haze.

8.3 Software Alignments and Settings

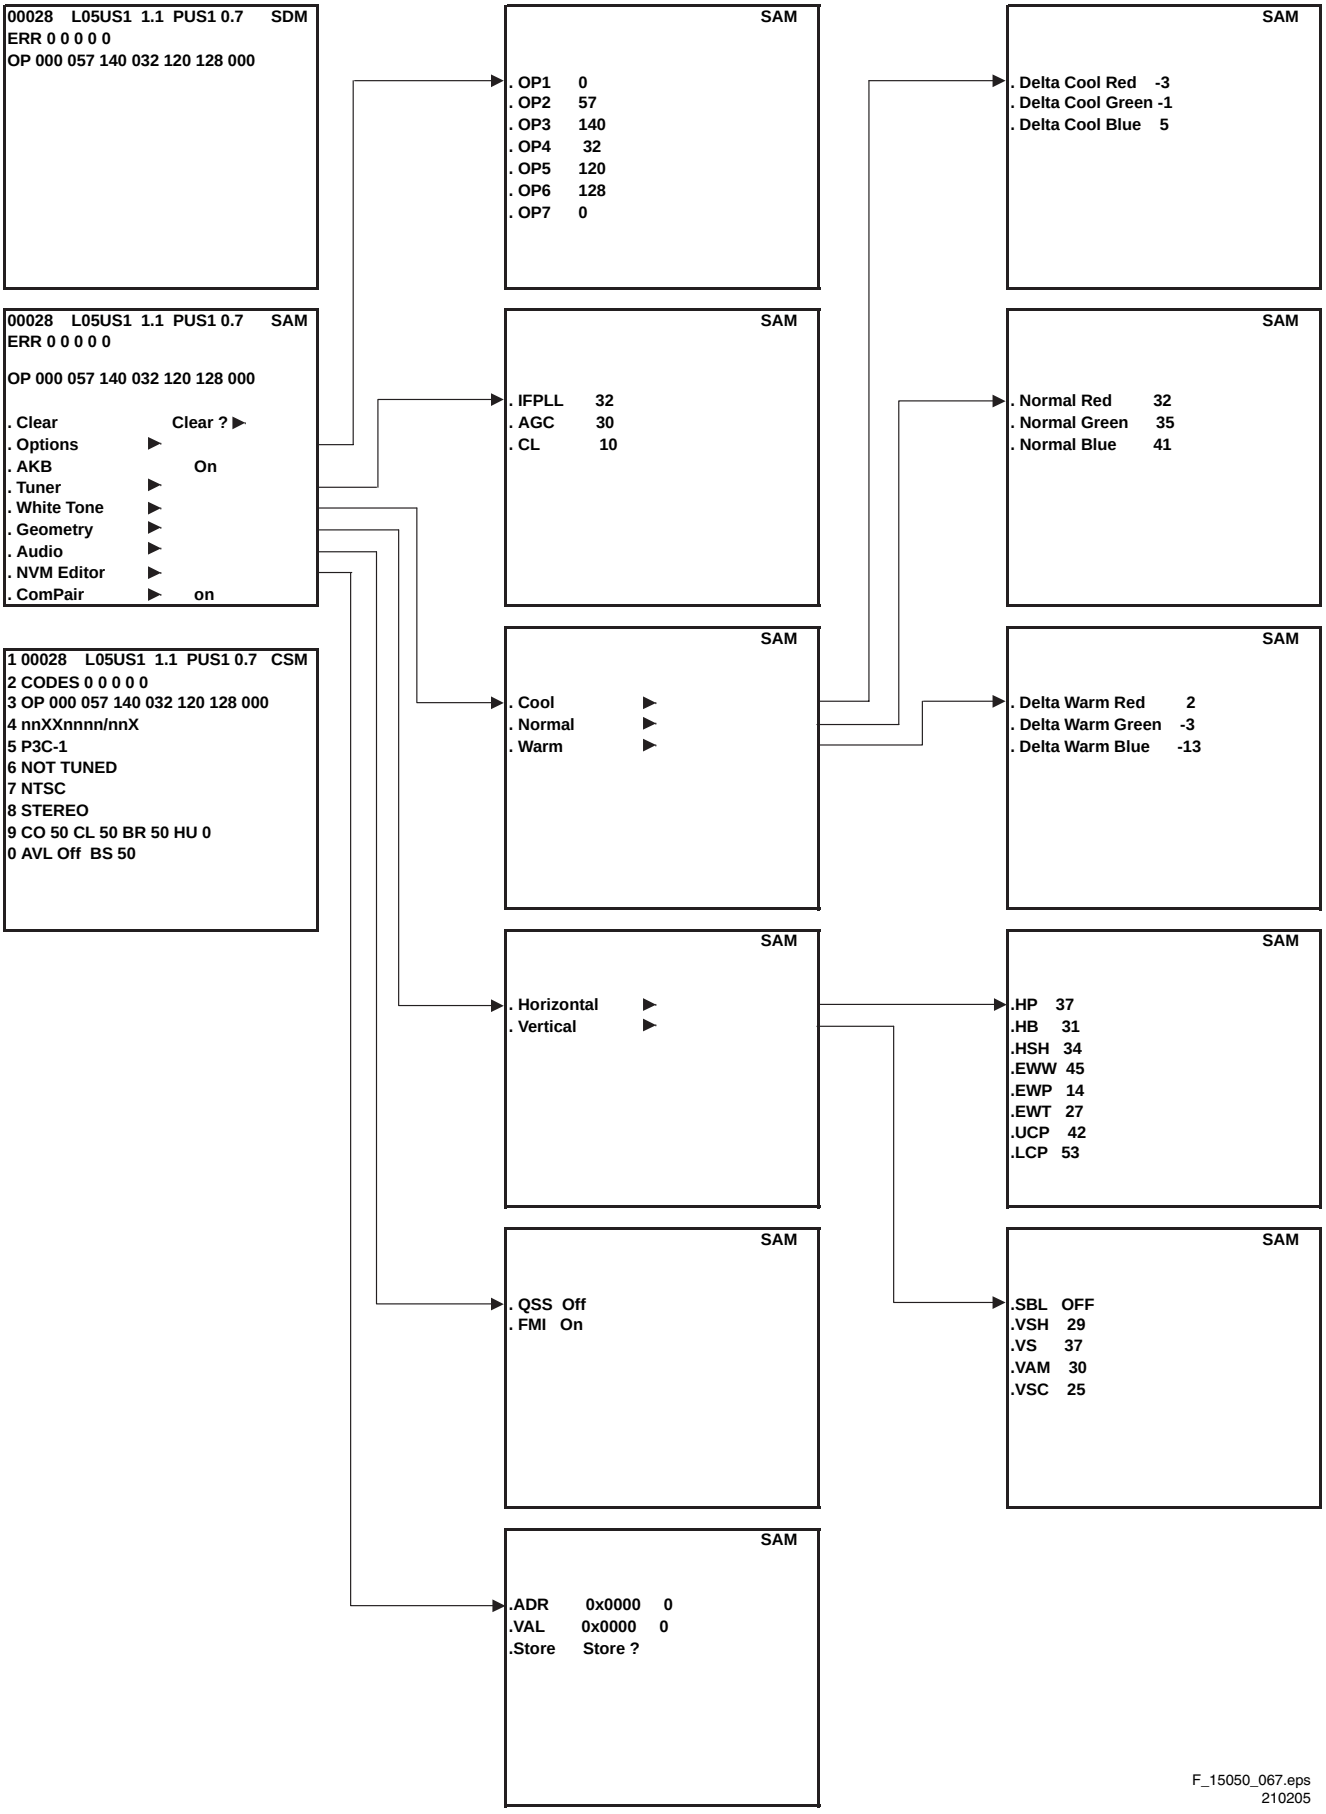

Figure 8-3 Service Mode overview

Enter the Service Alignment Mode (see also chapter 5 “Service Modes, ...”). The SAM menu will now appear on the screen. Select one of the following alignments:

- Options
- Tuner
- White Tone
- Geometry
- Audio

8.3.1 Options

Options are used to control the presence/absence of certain features and hardware.

How to Change an Option Byte

An Option Byte represents a number of different options. Changing these bytes makes it possible to set all options very fast. All options are controlled via seven option bytes. Select the option byte (OP1.. OP7) with the MENU UP/ DOWN keys, and enter the new value.

When you leave the OPTION submenu the changes in the Option Byte settings are automatically saved. Some changes will only take effect after the set has been switched “off” and “on” with the AC power switch (cold start).

How to Calculate the Value of an Option Byte

- Calculate an Option Byte value (OP1 .. OP7) in the following way:
- Check the status of the single option bits (OB): are they enabled (1) or disabled (0).
- When an option bit is enabled (1) it represents a certain value (see column “Bit value” in the table below). When an option bit is disabled, its value is 0.
- The total value of an Option Byte (decimal) is formed by the sum of its eight option bits. The factory values are printed on a sticker on the CRT (depends on region).

Table 8-1 Option Byte calculation

Bit (value)	OP1	OP2	OP3	OP4	OP5	OP6	OP7
0 (1)	OB10	OB20	OB30	OB40	OB50	OB60	OB70

Option bit Definition

Option Byte 1 (OP1)

- **OB17**: PHILIPS TUNER
  - 0 : ALPS / MASCO compatible tuner is in use.
  - 1 : Philips compatible tuner is in use.
- **OB16**: FM RADIO
  - 0 : FM radio feature is disabled or not applicable.
  - 1 : FM radio feature is enabled.
- **OB15**: LNA
  - 0 : Auto Picture Booster is not available or not applicable.
  - 1 : Auto Picture Booster is available.
- **OB14**: HDMI
  - 0 : High Definition Multimedia Interface (HDMI) feature is disabled or not applicable.
  - 1 : HDMI feature is enabled.
- **OB13**: YPbPr
  - 0 : Composite video (YPbPr) feature is disabled or not applicable.
  - 1 : YPbPr feature is enabled.
- **OB12**: UK PNP
  - 0 : UK's default Plug and Play setting is not available or not applicable.
  - 1 : UK's default Plug and Play setting is available.

  - When UK PNP and VIRGIN MODE are set to “1” at the initial setup and after exiting from menu, VIRGIN MODE will be set automatically to “0” while UK PNP remains “1”.
- **OB11**: VIRGIN MODE
  - 0 : Virgin mode is disabled or not applicable.
  - 1 : Virgin mode is enabled. Plug and Play menu item will be displayed to perform installation at the initial startup of the TV when VIRGIN MODE is set to “1”. After installation is finished, this option bit will be automatically set to “0”.
- **OB10**: CHINA
  - 0 : Tuning is not for China set, or this option bit is not applicable.
  - 1 : Tuning is for China set.

Option Byte 2 (OP2)
- **OB27**: Soft Clipping.
  - Not applicable. Default setting is “0”.
- **OB26**: GREEN UI
  - 0 : Green UI is disabled (for Philips brand).
  - 1 : Green UI is enabled (for Magnavox brand).
  - **Note:** only for NAFTA region.
- **OB25**: CHANNEL NAMING
  - 0 : Name FM Channel is disabled or not applicable.
  - 1 : Name FM Channel is enabled.
  - Note : Name FM channel can be enabled only when FM RADIO= “1”.
- **OB24**: LTI
  - 0 : Luminance Transient Improvement (LTI) is disabled or not applicable.
  - 1 : LTI is enabled.
- **OB23**: TILT
  - 0 : Rotate Picture is disabled or not applicable.
  - 1 : Rotate Picture is enabled.
- **OB22**: FINE TUNING
  - 0 : Fine Tuning for Channel Offset is disabled or not applicable.
  - 1 : Fine Tuning for Channel Offset is enabled.
- **OB21**: PIP PHILIPS TUNER
  - 0 : ALPS / MASCO compatible tuner is in use for PIP module.
  - 1 : Philips compatible tuner is in use for PIP module.
- **OB20**: HUE
  - 0 : Hue/Tint Level is disabled or not applicable.
  - 1 : Hue/Tint Level is enabled.

Option Byte 3 (OP3)
- **OB37**: EW FUNCTION
  - 0 : EW function is disabled. In this case, only Expand 4:3 is allowed, Compress 16:9 is not applicable.
  - 1 : EW function is enabled. In this case, both Expand 4:3 and Compress 16:9 are applicable.
- **OB36**: 2 TUNER PIP
  - 0 : Software selection no PIP
  - 1 : Software selection with PIP
  - **Note:** Only for EU/AP region for sets with PIP.
- **OB35**: PIP SPLITTER
  - 0 : Normal Tuner in PIP
  - 1 : Splitter in PIP
  - **Note:** Only for EU/AP region. For PIP sets and build in with Splitter in PIP tuner.
- **OB34**: SPLITTER
  - 0 : Normal Tuner for main chassis
  - 1 : Splitter Tuner for main chassis
  - **Note:** Only for EU/AP region.
- **OB33**: VIRTUAL DOLBY
  - 0 : Virtual Dolby is not applicable.
  - 1 : Virtual Dolby is applicable.
- **OB32**: WIDE SCREEN
  - 0 : Software is used for 4:3 sets or not applicable.
  - 1 : Software is used for 16:9 sets.
- **OB31**: WSSB (EU)
  - 0 : WSSB is disabled or not applicable.
  - 1 : WSSB is enabled.
  - Note : This option bit can be set to “1” only when WIDE SCREEN= “1”.
- **OB30**: ECO SUBWOOFER
  - 0 : Feature is disabled or not applicable.
  - 1 : Feature is enabled.

Option Byte 4 (OP4)
- **OB47**: OP_COMPRESS_16_10
  - 0 : Compress mode is not used.
  - 1 : Compress mode is used.
- **OB46**: OP_OPTIMISED_START
  - Not applicable. Default setting is “0”.
- **OB45**: ULTRA BASS
  - 0 : Ultra Bass is disabled or not applicable.
  - 1 : Ultra Bass is enabled.
  - Default setting is “0”.
- **OB44**: DELTA VOLUME
  - 0 : Delta Volume Level is disabled or not applicable.
  - 1 : Delta Volume Level is enabled.
- **OB43**: Reserved
  - Default setting is “0”.
- **OB42**: VOLUME LIMITER
  - 0 : Volume Limiter Level is disabled or not applicable.
  - 1 : Toggle Volume Limiter Level is enabled.
- **OB41**: Reserved
  - Default setting is “0”.
- **OB40**: STEREO NICAM 2CS
  - 0 : For AV Stereo.
  - 1 : For NICAM Stereo 2CS.

Option Byte 5 (OP5)
- **OB57**: AV1
  - 0 : AV1 source is not present.
  - 1 : AV1 source is present.
- **OB56**: AV2
  - 0 : AV2 source is not present.
  - 1 : AV2 source is present.
  - Note : For EU, when AV2=“1”, both EXT2 and SVHS2 should be included in the OSD loop.
- **OB55**: AV3
  - 0 : Side/Front AV3 source is not present.
  - 1 : Side/Front AV3 source is present.
- **OB54**: CVI
  - 0 : CVI source is not available.
  - 1 : CVI source is available.
- **OB53**: SVHS2
  - 0 : SVHS2 source is not available.
  - 1 : SVHS2 source is available.
  - Note : This option bit is not applicable for EU.
- **OB52**: SVHS3
  - 0 : SVHS3 source is not available.
  - 1 : SVHS3 source is available.
  - Note : This option bit is not applicable for EU.
- **OB51**: HOTEL MODE
  - 0 : Hotel mode is disabled or not applicable.
  - 1 : Hotel mode is enabled.
- **OB50**: Reserved
  - Default setting is “0”.

Option Byte 6 (OP6)
- **OB67**: PERSONAL ZAPPING
  - 0 : Personal Zapping feature is disabled or not applicable.
  - 1 : Personal Zapping feature is enabled.
- **OB66**: SMART_SURF
  - 0 : Smart Surf key is not used on remote control.
  - 1 : Smart Surf key is used on remote control.
- **OB65**: FM TRAP
  - 0 : FM Trap is not present.
  - 1 : FM Trap is present.
  - **Note:** Only for LATAM region.
- **OB64**: COMBFILTER
  - 0 : 3D-combfilter is not present.

  - 1 : 3D-combfilter is present.
- **OB63**: ACTIVE CONTROL
  - 0 : Active Control feature is disabled or not applicable.
  - 1 : Active Control feature is enabled.
- **OB62**: VIDEO TEXT
  - 0 : Video Text (DW with TXT) is disabled or not applicable.
  - 1 : Video Text (DW with TXT) is enabled.
  - **Note:** For EU only.
- **OB61**: LIGHT SENSOR
  - 0 : Light sensor feature is disabled or not applicable.
  - 1 : Light sensor feature is enabled.
- **OB60**: DUAL TEXT
  - 0 : Dual Text and Text Dual Screen are disabled or not applicable.
  - 1: Dual Text and Text Dual Screen are enabled.

Option Byte 7 (OP7)
- **OB77**: TIME WIN1
  - 00 : The time window is set to 1.2 s.
  - 01 : The time window is set to 2 s.
  - Note :The time-out for all digit entries depends on this setting.
- **OB76**: MALAY
  - For AP only. Default setting is “0”.
- **OB75**: THAI
  - For AP only. Default setting is “0”.
- **OB74**: SIGNAL_STRENGTH
  - For AP only. Default setting is “0”.
- **OB73**: Reserved
  - Default setting is “0”.
- **OB72**: Reserved
  - Default setting is “0”.
- **OB71**: Reserved
  - Default setting is “0”.
- **OB70**: Reserved
  - Default setting is “0”.

8.3.2 Tuner

Note: Described alignments are only necessary when the NVM (item 7601) is replaced.

IF PLL
This adjustment is auto-aligned. Therefore, no action is required.

AGC (AGC take over point)
1. Set the external pattern generator to a color bar video signal and connect the RF output to aerial input. Set amplitude to 10 mV and set frequency to 61.25 MHz (channel 3).
2. Connect a DC multimeter to pin 1 of the tuner (item 1000 on the main panel).
3. Activate the SAM.
4. Go to the TUNER sub menu.
5. Select AGC with the UP/DOWN cursor keys.
6. Adjust the AGC-value with the LEFT/ RIGHT cursor keys until the voltage at pin 1 of the tuner lies between 3.8 and 2.3 V (default value is “20”).
7. Switch the set to STANDBY, in order to store the alignments.

CL (Cathode drive level)
Always set to “5”.

8.3.3 White Tone

In the WHITE TONE sub menu, the values of the black cut off level can be adjusted. Normally, no alignment is needed, and you can use the given default values.
The color temperature mode (NORMAL, COOL and WARM) and the color (R, G, and B) can be selected with the UP/DOWN RIGHT/LEFT cursor keys. The value can be changed with the LEFT/RIGHT cursor keys. First, select the values for the NORMAL color temperature. Then select the values for the COOL and WARM mode. After alignment, switch the set to STANDBY, in order to store the alignments.

Default settings:
- NORMAL:
  - NORMAL R= “26”
  - NORMAL G= “32”
  - NORMAL B= “27”
- COOL:
  - DELTA COOL R= “-3”
  - DELTA COOL G= “0”
  - DELTA COOL B= “5”
- WARM:
  - DELTA WARM R= “2”
  - DELTA WARM G= “0”
  - DELTA WARM B= “-6”

8.3.4 Geometry

The geometry alignments menu contains several items to align the set, in order to obtain correct picture geometry.

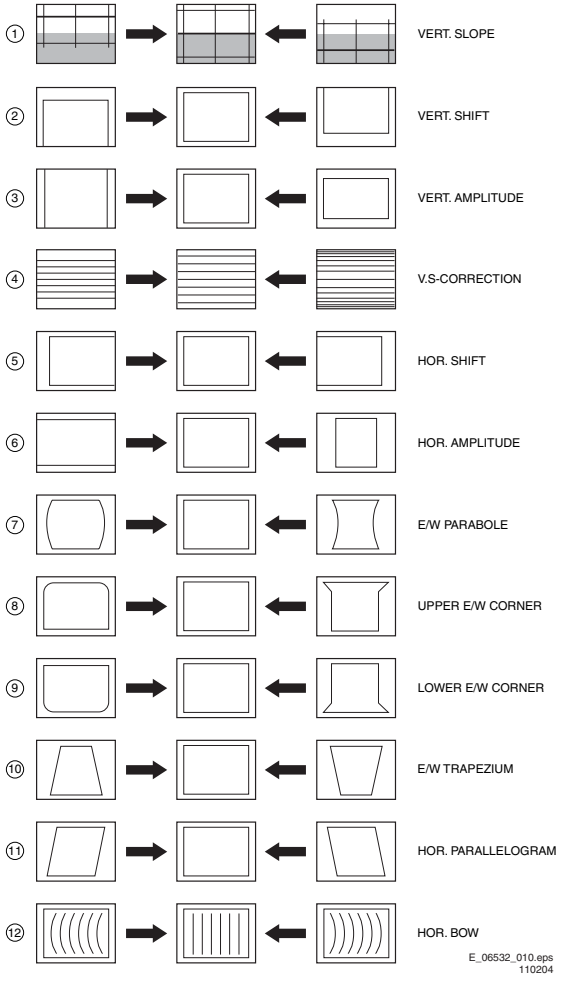

Figure 8-4 Geometry alignments

1. Connect an **external** video pattern generator to the aerial input of the TV-set and input a crosshatch test pattern. Set the generator amplitude to at least 1 mV and set frequency to 61.25 MHz (channel 3).
2. Set 'Smart Picture' to NATURAL (or MOVIES).
3. Activate the SAM menu (see chapter 5 “Service Modes, ...”).
4. Go to the GEOMETRY sub menu.
5. Choose HORIZONTAL or VERTICAL alignment.

Now the following alignments can be performed:

Horizontal

- **Horizontal Parallelogram (HP).** Align straight vertical lines in the top and the bottom; vertical rotation around the center.
- **Horizontal Bow (HB).** Align straight horizontal lines in the top and the bottom; horizontal rotation around the center.
- **Horizontal Shift (HSH).** Align the horizontal center of the picture to the horizontal center of the CRT.
- **East West Width (EWW).** Align the picture width until the complete test pattern is visible.
- **East West Parabola (EWP).** Align straight vertical lines at the sides of the screen.
- **Upper Corner Parabola (UCP).** Align straight vertical lines in the upper corners of the screen.
- **Lower Corner Parabola (LCP).** Align straight vertical lines in the lower corners of the screen.
- **East West Trapezium (EWT).** Align straight vertical lines in the middle of the screen.
- **H60 (Delta HSH for 60Hz, if present).** Align straight horizontal lines if NTSC system is used (60 Hz) i.s.o. PAL (50 Hz). Default value is “9”.

Vertical

- **Service blanking (SBL).** Switch the blanking of the lower half of the screen “on” or “off” (to be used in combination with the vertical slope alignment).
- **Vertical Shift (VSH).** Align the vertical centering so that the test pattern is located vertically in the middle. Repeat the 'vertical amplitude' alignment if necessary.
- **Vertical slope (VS).** Align the vertical center of the picture to the vertical center of the CRT. This is the first of the vertical alignments to perform. For an easy alignment, set SBL to “on”.
- **Vertical Amplitude (VAM).** Align the vertical amplitude so that the complete test pattern is visible.
- **Vertical S-Correction (VSC).** Align the vertical linearity, meaning that vertical intervals of a grid pattern must be equal over the entire screen height.
- **Vertical Zoom (VX, if present).** The vertical zoom is added in for the purpose of development. It helps the designer to set proper values for the movie expand or movie(16x9) compress. Default value is “25”.
- **V60 (Delta VAM for 60Hz, if present).** Align straight vertical lines if NTSC system (60 Hz) is used i.s.o. PAL (50 Hz). Default value is “-2”.

8.3.5 Audio

No alignments are needed for the audio sub menu. Use the given default values.

QSS (Quasi Split Sound)

- For NICAM/2CS sound system (EU/AP, except for AP-NTSC): set to “On”.
- For AV-Stereo sound system (sets without NICAM): set to “On”.
- For all other sets (NAFTA/LATAM/AP-NTSC): set to “Off”.

FMI (Frequency Modulation Intercarrier)

- For NICAM/2CS sound system (EU/AP, except for APNTSC): set to “On”.
- For AV-Stereo sound system (sets without NICAM): set to “Off”.
- For dBx/non-dBx sound systems: set to “On”.

NICAM Alignment

- For sets with NICAM/2CS (EU/AP, except for AP-NTSC) sound system: set to “79”.
- For all other sets (NAFTA/LATAM/AP-NTSC): set to “63”.

9. Circuit Descriptions, List of Abbreviations, and IC Data Sheets

Index of this chapter:

Notes:

- Only **new** circuits compared to the L04U chassis are described in this chapter. For the other circuit descriptions, see the manual of the L04U chassis.
- Figures can deviate slightly from the actual situation, due to different set executions.
- For a good understanding of the following circuit descriptions, please use the diagrams in sections “Block Diagrams, ...”, and/or “Electrical Diagrams”. Where necessary, you will find a separate drawing for clarification.

9.1 Introduction

The "L05" chassis is designed for the model year 2005 and is used for TV sets with large screen sizes (from 29 to 34 inch), in Super Flat and Real Flat executions (both in 4:3 and 16:9 variants). This chassis is High Definition ready with a NTSC/PAL tuning system.
There are three types of CRT, namely one with 100 degrees deflection angle, one with 110 degrees and a Wide Screen CRT.

In comparison to its predecessor (the L04), this chassis has the following (new) features:

- **High Definition (HD) signal processing:** The chassis has a special HD processing board.
- **HDMI input:** The chassis has a High-Definition Multimedia Interface (HDMI) input.

The standard architecture consists of a Main panel (called "family board"), a Picture Tube panel, a Side I/O panel, a HDMI panel, a HD panel and a Top Control panel. The Main panel consists primarily of conventional components with some surface mounted devices in the audio and video processing part.
The functions for the basic video and audio processing are performed by one IC (TDA1200x, item 7200), the so-called third generation Ultimate One Chip (UOC-III) (a.k.a. ‘Hercules’). This chip is mounted on the “solder” side of the main panel, and has the following tasks:

- Mono/stereo, audio switching and part of the video switching.
- FM sound demodulation.

The CVBS-signal produced by the UOCIII is supplied to the HD panel. This panel converts the standard framerate (1fH) CVBS-signal coming from the tuner and from the AV1 and AV2 inputs into a HD-signal with double framerate (2fH). The HD panel also handles video signals from the HDMI and the CVI input (I/O panel).
All signals entering the TV set, be it NTSC/PAL signals from the tuner or signals already in HD format from the HDMI I/O panel, are displayed on the CRT in 1080i format. The HD panel performs the following functions:

- Video processing (mainly by the Trident chip, IC7201).
- OSD processing.
- Closed caption / text processing
- A/D conversion (of analog signals coming directly from the HDMI I/O panel).

The tuning system features 181 channels with on-screen display. The main tuning system uses a tuner, a microcomputer, and a memory IC mounted on the main panel. The microcomputer communicates via the I^2C bus with the memory IC, the customer keyboard, the remote receiver, the tuner, the signal processor IC, the HD processing section, and the audio output IC. The memory IC retains the settings for favorite stations, customer-preferred settings, and service / factory data.
The on-screen graphics and closed caption decoding are done within IC 7206 located on the HD panel. They are added to the main signal in the display processor, IC 7221, also located on the HD panel.

The chassis uses a Switching Mode Power Supply (SMPS) for the main voltage source. The chassis has a 'hot' ground reference on the primary side and a cold ground reference on the secondary side of the power supply and the rest of the chassis. For more information on the power supply, see the L04 manual.

9.2 2fH Synchronization

The 2fH sync generation is done by the DPTV SVP (IC7201). This IC converts the H and V sync signals (Hs and Vs) coming from the UOC into 2fH sync signals (HSYNC and VSYNC) which are outputted to the TDA9332 (HOP).
The HOP again generates the necessary deflection signals like VD+ and VD- for the Frame deflection; HD for line deflection; EW_DRIVE.

9.3 Source Select

This chassis has the following inputs in addition to the tuner RF input:

- **AV1:** This is a composite video input.
- **CVI:** This is a Component Video Input, it can accept 480i, 480p, 720p or 1080i.
- **AV2:** This input can accept CVBS or S-Video.
- **Side:** This input can accept CVBS or S-Video.
- **HDMI:** This is a High-Definition Multimedia Interface, it can accept 480p, 720p or 1080i video and audio in a digital TMDS (Transition Minimized Differential Signal) format.

The audio/video source selection between the tuner, AV1, AV2 and Side is controlled via the UOCIII. The selected signal is fed to the HD panel which selects between the output of the UOCIII, CVI, and the HDMI input.
The Audio/Video Source Select is one of the more complex functions due to its diversity and complex switching. The Audio/Video Source Select comprises the following components:

- The UOCIII for Mono Audio and Video Source Selection.
- The HEF switch for Stereo Audio as well as Video Selection.

9.3.1 Options

The option settings for the Source Selection can be found in Option settings of the SAM mode. The Option settings for Option 5 are as follows:

- Option Byte 5
  - Bit 7: AV1
  - Bit 6: AV2
  - Bit 5: AV3
  - Bit 4: CVI
  - Bit 3: SVHS2
  - Bit 2: SVHS3
  - Bit 1: Hotel mode
  - Bit 0:

For more details on the option settings, please refer to chapter 8 “Alignments”.

9.3.2 Audio Source Selection

The signals coming out of the DEMDEC (internal demodulator/ decoder block of the UOCIII) are selectable and consist of the following (depending on the transmission):

- DEC L/R (Can be NICAM, FM 2CS, or BTSC Stereo).
- Mono (Refers to fallback/forced Mono in Stereo Transmission).
- SAP.

For L05, the assigned I/O with respect to the UOCIII is as follows:

- AV1 Input assigned to **Audio In 5**.
- AV2 Input assigned to **Audio In 3**.
- Side AV Input assigned to **Audio In 4**.
- External Interface Input assigned **to Audio In 2**.
- Constant Level Output assigned to **Loudspeaker Output**.

9.3.3 Video Source Selection

Video source selection is done inside the UOCIII. Therefore it provides a video switch with 3 external CVBS inputs and a CVBS output. All CVBS inputs can be used as Y-input for Y/C signals. However, only 2 Y/C sources can be selected because the circuit has 2 chroma inputs.
The selected input signal is fed to the HD panel for further processing.

9.4 Video Processing

The Video Processing is divided into two sections, one for the processing of 1fH signals (by the UOCIII), and a second for the processing of 2fH signals (on the HD panel, by the Trident chip).

The tuner is only one of the sources of video signal for the UOCIII. The tuner is controlled by the UOCIII. The UOCIII also receives video signals from AV2 and the Side I/O panel.
If a video signal is selected by the user, the selected CVBS signal is output to two different lines. One CVBS line goes to the Trident chip, IC 7201, on the HD panel. CVBS_TXT signals are fed to IC 7206 on the HD panel, which is able to process Closed Caption text or Teletext. This IC also generates the OSD texts.

If the TV set receives a 2fH signal (via one of its HDMI panel inputs, i.e. the CVI/YPbPr or the HDMI input), the signal is fed to a selector switch on the HD panel, IC 7205. The selected signal (component video or RGB) is fed to an AD converter, IC 7210. The digital signal coming from the AD converter is fed to the Trident chip, IC 7201. This IC enhances the video quality of the picture and scales the picture to the 1080i format. The analog RGB signal coming from the Trident chip is fed to the display processor, IC 7221. Here, the picture control functions are performed, as well as the insertion of OSD. Then, the processed video signal is fed to the CRT panel.

Some features:

- Full YUV-loop interface (alternative functions: DVD, RGB or Y/C).
- Internal OSD insertion (not Saturation or Contrast controlled).
- Double window implementation.
- Linear / non linear scaling for 16:9 sets.
- Tint (hue) on UV signals (including DVD).
- Peaking, Coring, Black \ Blue \ White-stretch.
- Transfer-Ratio and Scavem (also on TXT).

9.4.1 Block Diagram

Following diagram is the block diagram of the video processing part:

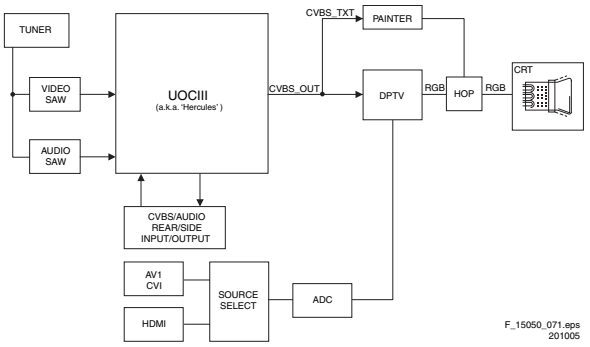

Figure 9-1 Video processing block diagram

9.5 Audio Processing

The audio decoding is done entirely via the UOCIII, IC 7200. The IF output from the Tuner is fed directly to either the Video-IF or the Sound-IF input depending on the type of concept chosen. There are mainly two types of decoder in the UOCIII, an analog decoder that decodes only Mono, regardless of any standards, and a digital decoder (or DEMDEC) that can decode both Mono as well as Stereo, again regardless of any standards.

Audio is included in the HDMI bit stream. Digital audio from IC7002 is fed to an audio DAC, IC 7011. The audio signal from the DAC is fed to IC 7050, a switch, of which only one input is used. The output of the switch is fed to the UOCIII chip, IC 7200.
Audio for the CVI input should be inserted into AV1. Pins 68 and 69 of the UOCIII provide the audio signal for the two-channel 20 W Audio Amplifier, IC 7990.

9.6 Abbreviation List

2CS	2 Carrier (or Channel) Stereo
ACI	Automatic Channel Installation: algorithm that installs TV sets directly from cable network by means of a predefined TXT page
ADC	Analogue to Digital Converter
AFC	Automatic Frequency Control: control signal used to tune to the correct frequency
AFT	Automatic Fine Tuning
AGC	Automatic Gain Control: algorithm that controls the video input of the feature box
AM	Amplitude Modulation
AP	Asia Pacific region
AR	Aspect Ratio: 4 by 3 or 16 by 9
ATS	Automatic Tuning System
AV	External Audio Video
AVL	Automatic Volume Leveler
BCL	Beam Current Limitation
B/G	Monochrome TV system. Sound carrier distance is 5.5 MHz
BTSC	Broadcast Television Standard Committee. Multiplex FM stereo sound system, originating from the USA and used e.g. in LATAM and AP-NTSC countries
CC	Closed Caption
CCC	Continuous Cathode Calibration
ComPair	Computer aided rePair
CRT	Cathode Ray Tube or picture tube
CSM	Customer Service Mode
CTI	Color Transient Improvement: manipulates steepness of chroma transients
CVBS	Composite Video Blanking and Synchronization
CVI	Component Video Input
DAC	Digital to Analogue Converter
DBX	Dynamic Bass Expander or noise reduction system in BTSC
D/K	Monochrome TV system. Sound carrier distance is 6.5 MHz
DFU	Direction For Use: description for the end user
DNR	Dynamic Noise Reduction
DSP	Digital Signal Processing
DST	Dealer Service Tool: special remote control designed for dealers to enter e.g. service mode
DVD	Digital Versatile Disc
EEPROM	Electrically Erasable and Programmable Read Only Memory
EHT	Extra High Tension
EHT-INFO	Extra High Tension information
EPG	Electronic Programming Guide
EU	Europe
EW	East West, related to horizontal deflection of the set
EXT	External (source), entering the set via SCART or Cinch
FBL	Fast Blanking: DC signal accompanying RGB signals
FILAMENT	Filament of CRT
FM	Field Memory or Frequency Modulation
H	Horizontal sync signal
HP	Headphone
I	Monochrome TV system. Sound carrier distance is 6.0 MHz
I2C or IIC	Integrated IC bus
IF	Intermediate Frequency
ITV	Institutional TV
LATAM	Latin American countries like Brazil, Argentina, etc.
LED	Light Emitting Diode
L/L'	Monochrome TV system. Sound carrier distance is 6.5 MHz. L' is Band I, L is all bands except for Band I
LS	Large Screen or Loudspeaker
M/N	Monochrome TV system. Sound carrier distance is 4.5 MHz
NC	Not Connected
NICAM	Near Instantaneous Compounded Audio Multiplexing. This is a digital sound system, mainly used in Europe.
NTSC	National Television Standard Committee. Color system mainly used in North America and Japan. Color carrier NTSC M/N = 3.579545 MHz, NTSC 4.43 = 4.433619 MHz (this is a VCR norm, it is not transmitted off-air)
NVM	Non Volatile Memory: IC containing TV related data e.g. alignments
OB	Option Bit
OC	Open Circuit
OP	Option Byte
OSD	On Screen Display
PAL	Phase Alternating Line. Color system mainly used in West Europe (color carrier = 4.433619 MHz) and South America (color carrier PAL M = 3.575612 MHz and PAL N = 3.582056 MHz)
PCB	Printed Circuit board
PLL	Phase Locked Loop. Used for e.g. FST tuning systems. The customer can give directly the desired frequency
POR	Power-On Reset
PTP	Picture Tube Panel (or CRT-panel)
RAM	Random Access Memory
RC	Remote Control handset
RGB	Red, Green, and Blue video signals
ROM	Read Only Memory
SDAM	Service Default / Alignment Mode
SAP	Second Audio Program
SC	Sandcastle: pulse derived from sync signals
S/C	Short Circuit
SCL	Serial Clock
SDA	Serial Data
SECAM	Sequence Couleur Avec Memoire. Color system mainly used in France and East Europe. Color carriers = 4.406250 MHz and 4.250000 MHz
SIF	Sound Intermediate Frequency
SS	Small Screen
STBY	Standby
SVHS	Super Video Home System
SW	Software
THD	Total Harmonic Distortion
TXT	Teletext
uP	Microprocessor
UOCIII	3rd generation Ultimate One Chip (a.k.a. 'Hercules')
UVSH	UHF, VHF, S-, and Hyper- band
V	Vertical sync signal
V_BAT	Main supply voltage for the deflection stage (mostly 141 V)
V-chip	Violence Chip
VCR	Video Cassette Recorder
