## System Specification

|                    |   |
|--------------------|---|
| Form Factor        | 2U Rack   |
| Processor          | Intel® Xeon® processors E5-2600 series and E5-2600 v2 series  |
| Memory             | Up to 256GB (16 DIMM slots): 2GB/4GB/8GB/16GB DDR3 up to 1600MT/s   |
| Chipset            | Intel® C600 series  |
| IO Expansion       | Five PCIe G3 Slots :<br>One x16 slot ( x8 signals) half-length, half-height<br>Three x8 Slot (x8 signals) half-length, half-height<br>One x8 slot (x4 signals) half-length, half-height |
| Internal Storage   | Hot-plug Hard Drive Options:<br>3.5" SAS SSD, SATA SSD, SAS (10K, 15K), nearline SAS (7.2K), SATA (7.2K)  |
| Network            | Port Q'ty : (3) 1GbE , (1) 1GeE management port<br>Controller : Intel I350-AM4  |
| Video              | Emulex Pilot 3 with 128 MB DDR3 RAM Support   |
| System Dimensions  | 88 (H) * 430 (W) * 660(D) (mm)  |
| Weight (min./max.) | 26.17kg   |

# System Tour

## External and Internal Structure

### Front Panel

The illustration below shows the system front panel.

| Item | Component  |
|------|--|
| 1    | Power button/indicator                           |
| 2    | Twelve 3.5-inch HDD drive bays (HDD#1 to HDD#12) |
| 3    | USB port   |
| 4    | HDD fault LED                                    |
| 5    | HDD activity LED                                 |
| 6    | HDD carrier latch                                |
| 7    | System normal status                             |
| 8    | System status LED                                |
| 9    | System caution status                            |

## System Status LED Indicator Status

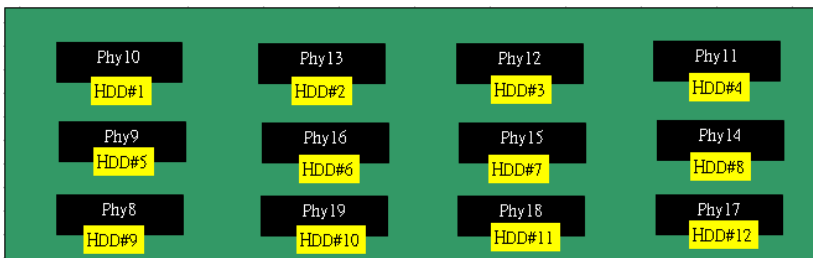

| LED   | Color                       | Description                   |
|---|-----------------------------|-------------------------------|
|  | Off Amber + Off Blue        | Power Off                     |
|  | Solid Amber + Blinking Blue | Pre - AC*                     |
|  | Solid Amber + Solid Blue    | iBMC ready                    |
|  | Solid Amber                 | All System Non-critical Event |
|   |                             | Fan Non-critical Event        |
|   |                             | Temp Non-critical Event       |
|   |                             | Voltage Non-critical Event    |
|   |                             | MEM ECC Fault                 |
|   |                             | CPU Thermal trip Shutdown     |
|   |                             | All System Critical Event     |
|  | Solid Blue                  | System Booted & Ready         |

**Note:** \*30 Second BMC Initialization when AC is applied to the server. Power button of front panel is disabled until BMC Initialization is complete.

## HDD Carrier LED Indicator Status

| LED   | Color                                       | HDD Status          |
|---|---|---------------------|
|  | White Off + Red Off                         | Slot Empty          |
|   | White Off or Blinking when Active + Red Off | Drive Online        |
|   | White Off or On when Active + Red Blinking  | Locate              |
|   | White off or Blinking when Active + Red On  | Drive Rebuild       |
|   | White Off + Red On                          | Array Device Failed |

## SAS Backplane Location Map

## Rear Panel

| No. | Component   |
|-----|---|
| 1   | Power supply module handle                        |
| 2   | Power supply module                               |
| 3   | Power supply module indicator                     |
| 4   | Power cable socket (110V-240V ; 50-60Hz; 3-6A)    |
| 5   | Power supply module release latch                 |
| 6   | Serial port                                       |
| 7   | Video port  |
| 8   | USB 2.0 ports                                     |
| 9   | Gigabit/management Ports(RJ45) (10/100/1000 Mbps) |
| 10  | Gigabit LAN Port(RJ45) (10/100/1000 Mbps)         |
| 11  | 10G SFP+ LAN Card                                 |
| 12  | PCI expansion slots                               |

## Power Supply (PS) LED Indicator Status

| LED   | Color State | Status | Description   |
|---|-------------|--------|---|
|  | Green       | Normal | N/A   |
|  | Off         | Off    | No AC power input<br>PSU Protection (OCP,OVP, SCP, Fan Lock...) |

## Rear Panel UID LED Indicator Status

| LED Color State | Status | Description                                |
|-----------------|--------|--|
| Off             | AC Off | No power; All system down                  |
| Off             | AC On  | BMC ready, but Chassis Identify not issued |
| Solid Blue      | AC On  | BMC Initializing                           |
| Solid Blue      | AC On  | Chassis Identifying (BMC ready)            |

## LAN Port LED Indicators

| LED indicator          | Color state    | Description               |
|------------------------|----------------|---------------------------|
| Green/Amber<br>(Right) | Off            | 10 Mbps                   |
|                        | Green Solid on | 100Mbps                   |
|                        | Amber Solid on | 1Gbps                     |
| Green (Left)           | Solid on       | Active Connection         |
|                        | Blinking       | Transmit/Receive activity |
|                        | Off            | No Connection             |

## Mainboard

The mainboard becomes accessible once you open the system. It should look like the figure shown below.

| No.   | Connector                           | Description            |
|-------|-------------------------------------|------------------------|
| 1     | 8 PIN PWR                           | 8 pins power connector |
| 2 - 5 | DIMMA0, DIMMA1,<br>DIMM B0, DIMM B1 | DDR3 sockets for CPU   |
| 6     | CPU0                                | Processor 0 socket     |
| 7     | 4 LAN                               | Rear LAN ports         |
| 8     | VGA COM1                            | Rear VGA and COM ports |

|       |                                       |                           |
|-------|---------------------------------------|---------------------------|
| 9 -12 | DIMM G0, DIMM G1,<br>DIMM H0, DIMM H1 | DDR3 sockets for CPU      |
| 13    | CPU1                                  | Processor 1 socket        |
| 14    | 8 PIN PWR                             | 8 pins power connector    |
| 15    | FAN                                   | Connector for system fans |
| 16    | 24 PIN PWR                            | 24 pins power connector   |
| 17-20 | DIMM C0, DIMM C1,<br>DIMM D0, DIMM D1 | DDR3 sockets for CPU      |
| 21    | PCH (I/O Hub)                         | C602                      |
| 22    | Internal USB                          | USB port (not used)       |
| 23-28 | SATA                                  | 6 SATA ports              |
| 29-32 | DIMM E0, DIMM E1,<br>DIMM F0, DIMM F1 | DDR3 sockets for CPU      |
| 33    | Front USB                             | Front USB connectors      |
| 34-36 | PCIE X8                               | 3 x PCIe x 8 signals      |
| 37    | PCIE X4                               | 1 x PCIe x 4 signal       |
| 38    | Front IO                              | Front IO Header           |
| 39    | PCIE X16                              | PCIe x 8 Signals          |

### 警語

這是甲類的資訊產品，在居住的環境使用時，可能會造成射頻干擾，在這種情況下，使用者會被要求採取某些適當的對策。

## Mainboard Jumper Settings

| No. | Jumper | Description  | Default |
|-----|--------|--|---------|
| 1   | J1A5   | HDD shorted: Chassis cover is closed.<br>HDR open: Chassis cover is removed.   | [1-2]   |
| 2   | J1D3   | Clear System CMOS Information<br>1-2 NORMAL RTC RST (DEFAULT)<br>2-3 CLR RST REGISTERS   | [1-2]   |
| 3   | J1D7   | The user sets this 3-pin jumper to clear the password. The Patsburg SSB INTRUDER# pin should be strapped LOW when the password needs to be reset.<br>1-2 NORMAL OPERATION (DEFAULT)<br>2-3 CLEAR PASSWORDS | [1-2]   |
| 4   | J1D8   | ME in forced update mode:<br>1-2 NORMAL OPERATION (DEFAULT)<br>2-3 CLEAR PASSWORDS   | [1-2]   |
| 5   | J3K2   | 1-2 GPIO CONTROLS WRITE PROTECT (DEFAULT)<br>2-3 FORCE WRITE PROTECT   | [1-2]   |
| 6   | J1E2   | When this 3-pin jumper is set, it puts the iBMC Firmware in update mode, which enables the user to update iBMC Firmware code when necessary.<br>1-2 NORMAL MODE (DEFAULT)<br>2-3 FORCE iBMC UPDATE)        | [1-2]   |

**Note:** Jumpers not indicated are for test purposes only.

## Memory Population Rule

A given memory channel will have 1 or 2 DIMMs installed. If one DIMM is loaded, Lower digit notation dim socket should be used for ex DIMM A0, DIMM B0 etc. DIMM sockets are color coded also for easier loading.

Restrictions within a socket and across a socket

- No mixing of DIMMs with different voltages, frequency, type (LRDIMM, RDIMM)
- All DIMMs will have ECC.
- 8 Ranks per Channel
- CPU1 and CPU2 (When populated) will always be configured identically.
- Pairs of DIMMs (A1/B1, A2/B2, etc) MUST be the exact same (same vendor, rev, DIMM Loading Order)
- Independent and locksetp, mirroring and non mirroring & sparing mode, Rank Sparring.

# Checkpoints

A status code is a data value used to indicate progress during the boot phase.

A subset of these status codes, known commonly as checkpoints, indicate common phases of the BIOS boot process.

Checkpoints are very useful in aiding software developers or technicians in debugging problems that occur during the pre-boot process.

## Checkpoint Ranges

| Status Code Range | Description  |
|-------------------|--|
| 0x01 – 0x0B       | SEC execution                                      |
| 0x0C – 0x0F       | SEC errors   |
| 0x10 – 0x2F       | PEI execution up to and including memory detection |
| 0x30 – 0x4F       | PEI execution after memory detection               |
| 0x50 – 0x5F       | PEI errors   |
| 0x60 – 0x8F       | DXE execution up to BDS                            |
| 0x90 – 0xCF       | BDS execution                                      |
| 0xD0 – 0xDF       | DXE errors   |
| 0xE0 – 0xE8       | S3 Resume (PEI)                                    |
| 0xE9 – 0xEF       | S3 Resume errors (PEI)                             |
| 0xF0 – 0xF8       | Recovery (PEI)                                     |
| 0xF9 – 0xFF       | Recovery errors (PEI)                              |

## Standard Checkpoints

### SEC Phase

| Status Code | Description |
|-------------|-------------|
| 0x00        | Not used    |

| Progress Codes  |  |
|-----------------|--|
| 0x01            | Power on. Reset type detection (soft/hard).          |
| 0x02            | AP initialization before microcode loading           |
| 0x03            | North Bridge initialization before microcode loading |
| 0x04            | South Bridge initialization before microcode loading |
| 0x05            | OEM initialization before microcode loading          |
| 0x06            | Microcode loading                                    |
| 0x07            | AP initialization after microcode loading            |
| 0x08            | North Bridge initialization after microcode loading  |
| 0x09            | South Bridge initialization after microcode loading  |
| 0x0A            | OEM initialization after microcode loading           |
| 0x0B            | Cache initialization                                 |
| SEC Error Codes |  |
| 0x0C – 0x0D     | Reserved for future AMI SEC error codes              |
| 0x0E            | Microcode not found                                  |
| 0x0F            | Microcode not loaded                                 |

## PEI Phase

| Status Code    | Description   |
|----------------|---|
| 0x00           | Not used  |
| Progress Codes |   |
| 0x10           | PEI Core is started                                 |
| 0x11           | Pre-memory CPU initialization is started            |
| 0x12           | Pre-memory CPU initialization (CPU module specific) |
| 0x13           | Pre-memory CPU initialization (CPU module specific) |
| 0x14           | Pre-memory CPU initialization (CPU module specific) |
| 0x15           | Pre-memory North Bridge initialization is started   |

|             |  |
|-------------|--|
| 0x16        | Pre-Memory North Bridge initialization (North Bridge module specific)        |
| 0x17        | Pre-Memory North Bridge initialization (North Bridge module specific)        |
| 0x18        | Pre-Memory North Bridge initialization (North Bridge module specific)        |
| 0x19        | Pre-memory South Bridge initialization is started                            |
| 0x1A        | Pre-memory South Bridge initialization (South                                |
| 0x1B        | Pre-memory South Bridge initialization (South Bridge module specific)        |
| 0x1C        | Pre-memory South Bridge initialization (South                                |
| 0x1D – 0x2A | OEM pre-memory initialization codes  |
| 0x2B        | Memory initialization. Serial Presence Detect (SPD) data reading             |
| 0x2C        | Memory initialization. Memory presence detection                             |
| 0x2D        | Memory initialization. Programming memory timing information                 |

## PEI Beep Codes

| # of Beeps | Description  |
|------------|--|
| 1          | Memory not Installed   |
| 1          | Memory was installed twice (InstallPeiMemory routine in PEI Core called twice) |
| 2          | Recovery started   |
| 3          | DXE IPL was not found  |
| 3          | DXE Core Firmware Volume was not found   |
| 4          | Recovery failed  |

|   |                            |
|---|----------------------------|
| 4 | S3 Resume failed           |
| 7 | Reset PPI is not available |

## DXE Phase

| Status Code | Description  |
|-------------|--|
| 0x60        | DXE Core is started  |
| 0x61        | NVRAM initialization   |
| 0x62        | Installation of the South Bridge Runtime Services              |
| 0x63        | CPU DXE initialization is started                              |
| 0x64        | CPU DXE initialization (CPU module specific)                   |
| 0x65        | CPU DXE initialization (CPU module specific)                   |
| 0x66        | CPU DXE initialization (CPU module specific)                   |
| 0x67        | CPU DXE initialization (CPU module specific)                   |
| 0x68        | PCI host bridge initialization                                 |
| 0x69        | North Bridge DXE initialization is started                     |
| 0x6A        | North Bridge DXE SMM initialization is started                 |
| 0x6B        | North Bridge DXE initialization (North Bridge module specific) |
| 0x6C        | North Bridge DXE initialization (North Bridge module specific) |
| 0x6D        | North Bridge DXE initialization (North Bridge module specific) |
| 0x6E        | North Bridge DXE initialization (North Bridge module specific) |
| 0x6F        | North Bridge DXE initialization (North Bridge module specific) |
| 0x70        | South Bridge DXE initialization is started                     |
| 0x71        | South Bridge DXE SMM initialization is started                 |
| 0x72        | South Bridge devices initialization                            |
| 0x73        | South Bridge DXE Initialization (South Bridge module specific) |
| 0x74        | South Bridge DXE Initialization (South Bridge module specific) |

|             |  |
|-------------|--|

## DXE Beep Codes

| # of Beeps | Description   |
|------------|---|
| 1          | Invalid password                                      |
| 4          | Some of the Architectural Protocols are not available |
| 5          | No Console Output Devices are found                   |
| 5          | No Console Input Devices are found                    |
| 6          | Flash update is failed                                |
| 7          | Reset protocol is not available                       |
| 8          | Platform PCI resource requirements cannot be met      |

## ACPI/ASL Checkpoints

| Status Code | Description   |
|-------------|---|
| 0x01        | System is entering S1 sleep state   |
| 0x02        | System is entering S2 sleep state   |
| 0x03        | System is entering S3 sleep state   |
| 0x04        | System is entering S4 sleep state   |
| 0x05        | System is entering S5 sleep state   |
| 0x10        | System is waking up from the S1 sleep state                                   |
| 0x20        | System is waking up from the S2 sleep state                                   |
| 0x30        | System is waking up from the S3 sleep state                                   |
| 0x40        | System is waking up from the S4 sleep state                                   |
| 0xAC        | System has transitioned into ACPI mode. Interrupt controller is in PIC mode.  |
| 0xAA        | System has transitioned into ACPI mode. Interrupt controller is in APIC mode. |

**Note:** Checkpoints may differ between different platforms based on system configuration. Checkpoints may change due to vendor requirements, system chipset or option ROMs from add-in PCI devices.

# Labels

This system comes with related labels attached to the machine and packaging for your information. In this chapter, the label list and the location of the labels will be illustrated.

## Label List

| Item | Label Name      | Qty |
|------|-----------------|-----|
| 1    | System SN Label | 1   |
| 2    | MAC ID Label    | 2   |
| 3    | BMC ID Label    | 1   |

## 1. System SN Label

The barcode label includes the following item:

- Wistron Part no. (11 characters, except ".")
  - Week code (3 characters) ex: 2010 16th week means: "016"
  - Serial no. (5 characters, 00001~FFFFF by Hexadecimal)
- (Every week should be arranged from 00001, and arrange by part no.)
- Manufacturing Code (2 characters), WZS is "J0"
  - Engineering Version (2 characters)

\* Detail label information refer to PE document.

Only a sample:

## 2&3. MAC & BMC ID Barcode Label

The barcode label includes the following item:

- BMC MAC no.
- Start MAC (the 1<sup>st</sup> of the total 6 numbers)
- End MAC No (the last of the total 6 numbers)

\* Detail label information refer to PE document. Only a sample::

## Warning Messages

Incorrect replacement of the lithium battery may lead to a risk of explosion.

The lithium battery must be replaced with an identical battery or a battery type recommended by the manufacturer.

Do not throw lithium batteries into the household waste. They must be disposed of in accordance with local regulations concerning special waste.

### Removing a hot-swap power supply

When you remove or install a hot-swap power supply, observe the following precautions.

#### CAUTION:

The power control button on the device and the power switch on the power supply do not turn off the electrical current supplied to the device. The device also might have more than one power cord. To remove all electrical current from the device, ensure that all power cords are disconnected from the power source.

**CAUTION:**

Never remove the cover on a power supply or any part that has the following label attached.

Hazardous voltage, current, and energy levels are present inside any component that has this label attached. There are no serviceable parts inside these components. If you suspect a problem with one of these parts, contact a service technician.

## 有關伺服器、儲存、電源、網路和機櫃產品

### 在安裝產品前請先閱讀

記住並遵守有關產品安全性與操作的所有說明。請隨時參考設備提供的操作說明 (平面或電子檔操作說明)。如果本指南與設備操作說明有出，以設備操作說明為準。詳細閱讀產品上及操作說明裡的所有注意事項。

為避免受傷、觸電、引起火災及設備受損，請仔細閱讀本指南所列的所有注意事項。

### 設備上的符號

下列符號可能會出現在設備上，表示潛在的危險情況：

這個符號和下列符號一起出現時表示有可能發生危險。如果沒有仔細閱讀注意事項，可能有受傷的危險。請參考操作說明以獲得明確的資料。

這個符號表示能源線路有危險或有觸電的危險。請向專業人員尋求維修協助。

**注意：**為避免觸電受傷，請不要打開外殼。請向專業人員尋求保養、升級和維修等協助。

這個符號表示有觸電的危險。這部份不會需要使用也不會需要維修。無論什麼原因都不要打開。

**注意：**為避免觸電受傷，請不要打開外殼。

在 RJ-45 插座上的符號表示網路介面連結。

**注意：**為避免觸電、引起火災及設備受損，請勿將電話或電信插頭插入此插座。

這個符號表示表面或零件過熱。如果接觸到這個表面，有可能有燙傷的危險。

**注意：**為避免接觸到過熱零件而燙傷，請等表面冷卻再接觸。

電源供應器或系統上的這些符號表示供應設備的電力來源有許多種。

**注意：**為避免觸電受傷，請拔掉所有的電線，完全切斷系統的電源。

重量 (公斤)  
重量 (磅)

這個符號表示該零件的重量超出一個人安全處理的建議重量。

**注意：**為避免受傷或設備受損，請仔細了解當地對手動處理材料的職業健康和安全性需求與指導方針。

## 甲類警語及 Label 位置大小

82.6 cm

## 一般注意事項

### 保養和維修企業級商品的注意事項

**警告**

本電池如果更換不正確會有爆炸的危險  
請依製造商說明書處理用過之電池

### 電池

- 請勿嘗試替電池充電
- 請勿將電池曝露在超過 60 度 C (140F) 的溫度下。
- 請勿拆解、壓壞、戳破電池，也不要讓電池短暫與外界接觸，或者置於火中或水中。
