only

Run / Stop

High power operation

Maximum capacity
operation (Max 15 minutes)

- Increased compressor speed
- Increased air flow

Energy-saving operation

- Changes set temperature at 28°C in cooling mode and 22°C in heating mode, 25°C in auto mode.
- Operation correction by outdoor temperature

Main functions

Energy management

Peak cut timer • Automatic temperature set back • Weekly timer • Set ON/OFF timer by hour
• Set ON/OFF timer by clock • Fan only operation • Sleep timer

Comfort

Individual flap control • High power operation • External ventilation ON/OFF • Warm up operation
Automatic fan speed • Temperature increment setting by 0.5°C

CONTROL

Advanced touch screen panel with full dot **Liquid Crystal Display**

Basic operation

All settings done by **tapping touch screen panel**

Operation mode setting screen

The operation mode can be selected by simply tapping this button.

Setting temperature screen

You can select the desired temperature by tapping the ▲▼ button.

- Heating standby display • Defrosting operation display • Auto cooling/heating display • °C/°F display
- Administrator settings • Room name setting

Service

- Error code display • Operation data display • Next service data display • Contact company display
- USB connection (mini-B)

Hyper Inverter

Our advanced technology has allowed us to achieve high efficiency, powerful heating and long distance refrigerant piping specifications.

This feature permits installation of the units when a heating operation under temperature conditions down to -20°C is required. Design flexibility has been improved by an extension of the refrigerant piping length to 100m (12.5 & 14.0kW).

Long piping (in case of 12.5 & 14.0kW)

Strong heating (in case of 7.1~14.0kW)

-20C : Heating operation down to -20°C
-15C : Nominal heating capacity maintained at -15°C

Powerful heating capacity

Maximum heating capacity has been increased by optimising refrigeration control, the use of electronic expansion valves and our twin rotary compressors. The Hyper Inverter series can reach the set temperature very quickly. Normal heating capacity can be maintained when the outdoor temperature is -15°C . It is very effective for use in cold areas.

Temperature of supply air can reach 40°C in 4 minutes after start up under low temperature operation conditions (at both indoor and outdoor temperature of 2°C) and can reach 50°C in 8 minutes after that.

Micro Inverter

Compact design of outdoor units

FDC100VN 10.0kW

Our single fan micro 10.0kW condenser is one of the most compact in the industry being only 845(h)x970(w)x370(d)

Size reduction and high efficiency performance of the DC twin rotary compressor

The DC twin rotary compressor can operate at speeds as high as 120 rps to achieve the required capacity. Vector control provides perfect compressor control. Starting current has reduced significantly and vibration has been minimized.

Improved efficiency of the heat exchanger

Re-designing the fins to a straight shape has reduced the pressure loss of the air flow in the heat exchanger. A new surface treatment on the fins has enhanced the frost resistance capacity compared to former models. A high speed fan motor has increased the airflow which allows cooling capacity to be maintained even at high outdoor air temperatures.

Protection

Improved operation of the electronic expansion valve allows for more reliable oil return and this assists to protect the compressor.

Ceiling Cassette - 4way - Indoor units

FDT-FDTC

Individual flap control system

Individual flap control is available even after installation. This means that the installation area has become wider than before.

The outlet design has been perfected to allow sufficient air flow that can reach a long distance from the indoor unit.

Previous

Current

Flap control system

The design of the heat exchanger has changed from 2 parts to a single piece. The height of the indoor unit has been reduced significantly.

*RCH-E3 is not applicable to the Individual flap control system and the Flap control system.

The thinnest design

The design of the heat exchanger has changed from 2 parts to 1 part, the height of indoor unit is reduced.

DC fan motors are used to increase efficiency. Weight has been reduced and as a result the unit has become one of the most compact in the industry.

FDT125~140

18% reduction!!

FDT71

9% reduction!!

Shape of heat exchanger

Duct Connected - Middle Static pressure

FDUM

Automatic external static pressure (E.S.P.) control

By using a DC motor, the optimum air flow volume can be achieved by this automatic control.

The indoor unit will recognize external static pressure automatically and keep rated air flow volume.

E.S.P. button

External static pressure can be set by E.S.P. button.

Improved servicing

Fan unit (impeller and motor) can be pulled out from the right side of the unit. Maintenance is available from the right side or from beneath.

Improvement of low tap noise dB(A)

Air flow sound has been reduced by a new fan and casing design.

Refrigerant flow sound was been decreased by advanced refrigerant distributor design.

(Sound Pressure level in the Lo mode)

Point 5

Compact and Convenient

•600mm Drain Pump

Drain can be discharged upward by 600 mm from the ceiling surface close to the indoor unit.
It allows a piping layout with a high degree of freedom depending on the installation location.

•600 x 600 ceiling

Indoor unit size (W:570 x D:570) brings easy installation for 600 x 600 ceiling and Panel size (700 x 700) is suitable for 600 x 600 ceiling. Height is one of the industry's lowest level at 248mm and weight is 16.5kg only.

model	a	b	c	d	e
FDEN100~125	1572	1540	1620	255	250

**Point
1**

Improved installation workability

Increased freedom of a piping layout

The refrigerant pipe from the unit can be arranged in three directions, rear, right and up. The drain pipe can be arranged in two directions, left and right. This will allow a free layout of piping for various installation conditions. The unit can only be serviced from below.

**Point
2**

Compact and modern design

All models fit compactly on ceiling. (Height-210mm or 250mm). Plain, modern design featuring rounded edges gives room a comfortable atmosphere.

Micro

FDC125VNX
FDC140VNX

Blue Fin 7.1-14.0kW

Due to application of blue coated fins (KS101) for the heat exchanger of the new outdoor unit, corrosion resistance has been improved compared to previous models.

Base heater kit (option)

This kit is recommended to be used in an area where the temperature drops below 0°C.

CW-H-E
applied for
FDC100VN
FDC125~140VNX

Installation workability

Enhanced installation workability thanks to the extended pipe length – one of the longest levels in the industry. Units are pre-charged with refrigerant.

Point
1

Piping length – 100m (Hyper Inverter 12.5~14.0kW)

HyperInverter

Micro Inverter

Point
2

Refrigerant precharged piping length extending to 30m

Refrigerant precharged piping length extends up to 30m. (5.0 & 6.0kW up to 15m)

This eliminates the need to add refrigerant on site, which sets it free from the trouble of excessive or insufficient charging of refrigerant, and allows carrying out the installation smoothly.

High efficiency

Reduction of air flow pressure loss

Pressure caused by air flow in the indoor unit is reduced by making the air outlet larger. The reduction of pressure reduces the load on the fan motor so efficiency increases.

Increase of heat transfer efficiency

Heat transfer efficiency has improved by using high efficiency piping and by the redesign of the heat exchanger from 2 to 1 piece.

Convenience

CnT terminal

A dry contact is fitted to each indoor unit which is used when a signal output is required.

Monitoring Function

Condensers are fitted with RS232C so you can connect directly to your PC for monitoring. MHI service software, Mente PC makes service tasks simple.

Remote control RC-E5

The new remote control for all indoor units. Non-polar 2 core wiring is used. Installation is easier.

All models employ R410A with RoHS* directive

Employment of lead free solder

Adapt to RoHS

In order to comply with RoHS standard, the new inverter series use lead free solder.

*"RoHS" is the abbreviation of the new European standard, which means Restriction of Hazardous Substances.

Employment of **R410A** refrigerant

All models of the FD inverter series use refrigerant R410A characterized by the ozone depletion coefficient being 0.

Control System SUPERLINK-II

Central Control

SC-SL1N-E

Start/stop control of up to 16 indoor units is possible either individually or collectively. With simple operations, you can effect centralised control.

SC-SL2NA-E

Centralised control of up to 64 indoor units. It can allow connection with a weekly timer without using any interface.

SC-SL3N-AE/BE

Easy operation through the large color LCD and touch panel. Up to 128 indoor units can be controlled, when three SUPERLINK-II systems are connected.

PC windows central control

SC-WGWN-A/B

(SC-WGWN-B has electric power calculation function)

Up to 96 cells (some cells can have two or more indoor units and total number of indoor units can be up to 128 units) are controlled from the Internet. Additional engineering service cost is required. Please consult your dealer when using this central control.

BMS interface unit

SC-BGWN-A/B

(BACnet gateway)

(SC-WGWN-B has electric power calculation function)

Up to 96 cells (some cells can have two or more indoor units and total number of indoor units can be up to 128 units) are controlled centrally from a BMS.

Additional engineering service cost is required. In case of SC-BGWN-B, communication test by qualified person regarding electric cost calculation function is required before commissioning. Please consult your dealer when using this gateway.

SC-LGWN-A

(LonWorks gateway)

Up to 96 indoor units (48 indoor unit x 2) are linked as an open network. Centrally controlled through LonWorks.

Additional engineering service cost is required. Please consult your dealer when using this gateway.

SUPERLINK E BOARD (SC-ADNA-E)

This board is used when conducting control of the single package (wired remote control unit) 1-type series using a network option (SC-SL1N-E, SC-SL2NA-E, etc).

(1) Functions

- Transmits the settings from the network option to the indoor units.
- Returns the priority indoor unit data in response to a data request from the network option.
- Inspects the error status of connected indoor units and transmits the inspection codes to the network option.
- A maximum of 16 units can be controlled (if in the same operation mode).

(2) Wiring connection diagram

(3) Metal box dimension

Control Systems - Individual Control

Remote Control line up

	indoor unit	remote control
wired	all models	RC-E5
		RCH-E3

	indoor unit	remote control
wireless	FDT	RCN-T-36W-E
	FDTC	RCN-TC-24W-ER
	FDUM, FDU	RCN-KIT3-E
	FDEN	RCN-E-E

Wired remote control with weekly timer (option)

RC-E5

The RC-E5 controller enables extensive access to service and maintenance technical data combined with easy to use functions and a clear LCD display.

Weekly timer function as standard

RC-E5 provides (as a standard feature) a weekly timer, which allows one-week operation schedules to be registered. A user can specify up to four times a day to start/stop the air conditioner. (Temperature setting is also possible with the timer).

Timer operation

Time		8	9	10	11	12	13	14	15	16		23
RUN		Timer-1		Timer-2		Timer-3		Timer-4				
STOP												

Run hour metres to facilitate maintenance checking

RC-E5 stores operation data when an anomaly occurs and indicates the error on the LCD. It also displays cumulative operation hours of the air conditioner and compressor since commissioning.

Room temperature controlled by the remote control sensor

The temperature sensor is housed in the top section of the remote control unit. This arrangement has improved the sensitivity of the remote control unit's sensor, which permits more finely controlled air conditioning.

Changeable set temperature ranges

RC-E5 allows the upper and lower limits of a set temperature range to be specified separately.

By adjusting a set temperature range, you can ensure energy saving air conditioning by avoiding excessive cooling or heating.

Changeable range	
Upper limit	20~30C(effective for heating operation)
Lower limit	18~26C(effective for non-heating operation)

Simple remote control (option)

RCH-E3 (wired)

Considering specialised usage in hotel rooms, control buttons are limited only to minimum required functions such as ON/OFF, mode, temperature setting and fan speed. It is really simple and easy to use.

RCH-E3 is not applicable to the Individual flap control system and the Flap control system. When RCH-E3 is used, the fan has 3 speed settings (Hi-Me-Lo) only.

Up to 16 units

It can control up to 16 units individually, by pressing the AIR CON No. button.

AUTO restart

This function allows starting the air conditioner automatically when power supply is restored after power failure or by turning on the power switch.

Wireless remote control (option)

For wireless control simply insert the infrared receiver kit on a corner of the panel.

RCN-T-36W-E, RCN-TC-24W-ER

RCN-KIT3-E

RCN-E-E

When wireless remote control is used, the fan has 3 speed settings (Hi-Me-Lo) only.

Thermistor (option)

SC-THB-E3

This sensor is used when individual remote control is not required in each room and the system is under central control. By installing sensors in strategic locations through out the structure greater comfort control is achieved. In many instances one additional sensor is all that is required.

Q-ton^{Air to Water}

Coming Soon

Commercial use Heat Pump Water Heater

Natural refrigerant CO₂ Air to Water System
 30kW~480kW (for commercial use)

Easy operation
 Advanced touch screen panel with full dot Liquid Crystal display
 eco touch REMOTE CONTROL

User friendly
 • LCD panel with light tap operation introduced as the industry's first
 • Simple interface with only three buttons

High level of visibility
 • Big LCD with 3.8 inch full dot display
 • Back light function

You can check transition of hot water storage amount at a glance.

RC-Q1E

eco touch

Schedule setting operation to fill up

V-ton^{Module Chiller}

Module Chiller System

Coming Soon

Module Chiller MVC

Water delivery for cooling & heating
 Module Chiller & Fan-coil

Module chiller MVC

Air delivery: Module Chiller & AHU, Ducting

Connectable number

Able to operate maximum total 12,000kW on one system

Max connect number: 5 groups

Max connect number: 108 units (4 groups x 10 units)

Max connect number: 422 modules (108 units x 4 modules)

Possible to combine operation with the turbo refrigeration system (cooling tower + pump)

Control the group as one unit by Ecoconductor

Control max 18 units + Ecoconductor

Control max 6 groups (1 group = max 18 units)

Control both system of Module chiller & Turbo system

Enable to connect to WEB system

Observation & Control

Before starting use

Heating performance

The heating performance values (kW) described in catalog are the values obtained by operating at an outdoor temperature of 7C and indoor temperature of 20C as set forth in the ISO Standards. As the heating performance decreases as the outdoor temperature drops, if the outdoor temperature is too low and the heating performance is insufficient, use other heating appliances as well.

Indication of sound values

The sound values are the values (A scale) measured in a chamber such as an anechoic chamber following the ISO Standards. In the actual installation state, the value is normally larger than the values given in the catalog due to the effect of surrounding noise and echo. Take this into consideration when installing.

Use in oil atmosphere

Avoid installing this unit in as atmosphere where oil scatters or builds up, such as in a kitchen or machine factory.

If the oil adheres to the heat exchanger, the heat exchanging performance will drop, mist may be generated, and the synthetic resin parts may deform and break.

Use in acidic or alkaline atmosphere

If this unit is used in acidic atmosphere such as hot spring areas having high level of sulfuric gases or in alkaline atmosphere including ammonia or calcium chloride, places where the exhaust of the heat exchanger is sucked in, or at coastal areas where the unit is subject to salt breezes, the outer plate or heat exchanger, etc., will corrode. Please ask a dealer or specialist when you use an air conditioner in places differing from a general atmosphere.

Use in places with high ceilings

If the ceiling is high, install a circulator to improve the heat and air flow distribution when heating.

Refrigerant leakage

The refrigerant (R410A) used for Air conditioner is non-toxic and nonflammable in its original state.

However, in consideration of a state where the refrigerant leaks into the room, measures against refrigerant leaks must be taken in small rooms where the tolerable level could be exceeded. Take measures by installing ventilation devices, etc.

Use in snowy areas

Take the following measures when installing the outdoor unit in snowy areas.

Snow prevention

Install a snow-prevention hood so that the snow does not obstruct the air intake port or enter and freeze in the outdoor unit.

Snow piling

In areas with heavy snow fall, the piled snow could block the air intake port. In this case, a frame that is 50cm or higher than the estimated snow fall must be installed underneath the outdoor unit.

Automatic defrosting device

If the temperature is low, and the humidity is high, frost will stick to the heat exchanger of the outdoor unit. If use is continued, the heating performance will drop.

The "Automatic defrosting device" will function to remove this frost.

After heating for approx, three to ten minutes, it will stop, and the frost will be removed. After defrosting, hot air will be blown again.

Servicing the air-conditioner

After the air-conditioner is used for several seasons, dirt will build up in the air-conditioner causing the performance to drop. In addition to regular servicing, we recommend the maintenance contract (charged for) by a specialist.

Safety Precautions

Air-conditioner usage target

The air-conditioner described in this catalog is a dedicated cooling/heating device for human use.

Do not use it for special applications such as the storage of foodstuffs, animals or plants, computer server rooms, precision devices or valuable art, etc.

This could cause the quality of the items to drop, etc.

Do not use this for cooling vehicles or ships. Water leakage or current leaks could occur.

Before use

Always read the "User's Manual" thoroughly before starting use.

Installation

Always commission the installation to a dealer or specialist. Improper installation will lead to water leakage, electric shocks and fires.

Make sure that the outdoor unit is stable in installation. Fix the unit to stable base.

Usage place

Do not install in places where combustible gas could leak or where there are sparks.

Installation in a place where combustible gas could be generated, flow or accumulate, or places containing carbon fibers could lead to fires.

Only persons that are qualified and licensed are permitted to install and service products that contain refrigerants in Australia, go to www.arctick.org. Suitable access for service must be provided in compliance with industry standards and local regulations.
