

BIOS setup program

This motherboard supports a programmable firmware chip that you can update using the provided utility described in section **Managing and updating your BIOS**.

Use the BIOS Setup program when you are installing a motherboard, reconfiguring your system, or prompted to “Run Setup.” This section explains how to configure your system using this utility.

Even if you are not prompted to use the Setup program, you can change the configuration of your computer in the future. For example, you can enable the security password feature or change the power management settings. This requires you to reconfigure your system using the BIOS Setup program so that the computer can recognize these changes and record them in the CMOS RAM of the firmware chip.

The firmware chip on the motherboard stores the Setup utility. When you start up the computer, the system provides you with the opportunity to run this program. Press during the Power-On Self-Test (POST) to enter the Setup utility; otherwise, POST continues with its test routines.

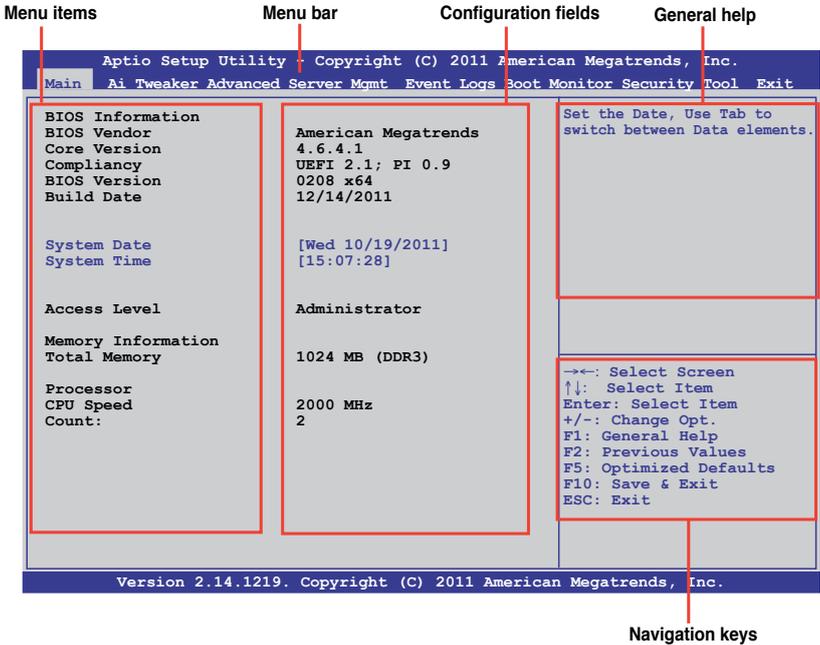

If you wish to enter Setup after POST, restart the system by pressing <Ctrl+Alt+Delete>, or by pressing the reset button on the system chassis. You can also restart by turning the system off and then back on. Do this last option only if the first two failed.

The Setup program is designed to make it as easy to use as possible. Being a menu-driven program, it lets you scroll through the various sub-menus and make your selections from the available options using the navigation keys.

-
- The default BIOS settings for this motherboard apply for most conditions to ensure optimum performance. If the system becomes unstable after changing any BIOS settings, load the default settings to ensure system compatibility and stability. Press <F5> and select **Yes** to load the BIOS default settings.
 - The BIOS setup screens shown in this section are for reference purposes only, and may not exactly match what you see on your screen.
-

BIOS menu screen

Menu bar

The menu bar on top of the screen has the following main items:

- Main** For changing the basic system configuration
- Ai Tweaker** For changing the Ai Tweaker settings
- Advanced** For changing the advanced system settings
- Server Mgmt** For changing the server management settings
- Event Logs** For changing the event log settings
- Boot** For changing the system boot configuration
- Monitor** For displaying the system temperature, power status, and changing the fan settings
- Security** For changing the security settings
- Tool** For configuring options for special functions
- Exit** For selecting the exit options

To select an item on the menu bar, press the right or left arrow key on the keyboard until the desired item is highlighted.

Menu items

The highlighted item on the menu bar displays the specific items for that menu. For example, selecting **Main** shows the Main menu items.

The other items (Event Logs, Advanced, Monitor, Boot, Tool, and Exit) on the menu bar have their respective menu items.

Submenu items

A solid triangle before each item on any menu screen means that the item has a submenu. To display the submenu, select the item and press <Enter>.

Navigation keys

At the bottom right corner of a menu screen are the navigation keys for the BIOS setup program. Use the navigation keys to select items in the menu and change the settings.

General help

At the top right corner of the menu screen is a brief description of the selected item.

Configuration fields

These fields show the values for the menu items. If an item is user-configurable, you can change the value of the field opposite the item. You cannot select an item that is not user-configurable.

A configurable field is enclosed in brackets, and is highlighted when selected. To change the value of a field, select it and press <Enter> to display a list of options.

Pop-up window

Select a menu item and press <Enter> to display a pop-up window with the configuration options for that item.

Scroll bar

A scroll bar appears on the right side of a menu screen when there are items that do not fit on the screen. Press the Up/Down arrow keys or <Page Up> /<Page Down> keys to display the other items on the screen.

Main menu

When you enter the BIOS Setup program, the Main menu screen appears. The Main menu provides you an overview of the basic system information, and allows you to set the system date, time, language, and security settings.

The Server Management tab and menu appear only when you install ASMB card on the motherboard.

System Date [Day xx/xx/xxxx]

Allows you to set the system date.

System Time [xx:xx:xx]

Allows you to set the system time.

Ai Tweaker menu

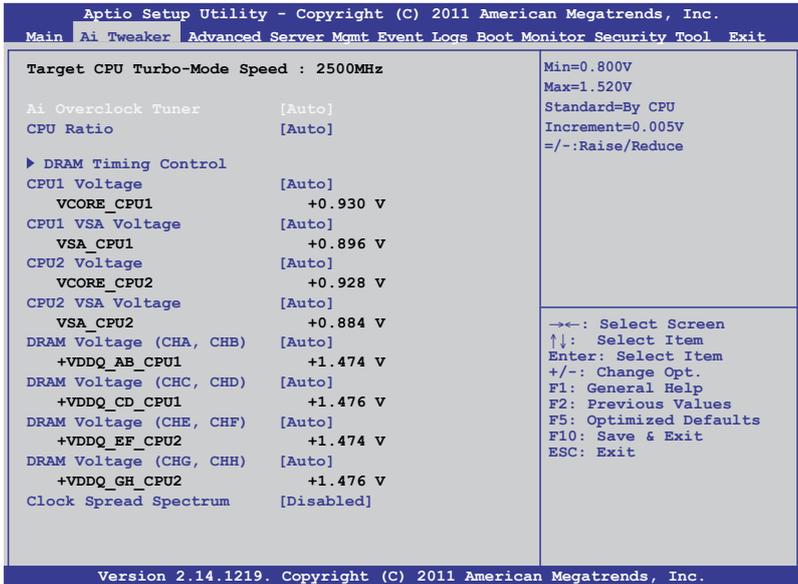

The Ai Tweaker menu items allow you to configure overclocking-related items.

Be cautious when changing the settings of the Ai Tweaker menu items. Incorrect field values can cause the system to malfunction.

The configuration options for this section vary depending on the CPU and DIMM model you installed on the motherboard.

Ai Overclock Tuner [Auto]

Allows you to select the CPU overclocking options to achieve the desired CPU internal frequency. Select any of these preset overclocking configuration options:

- [Auto] Loads the optimal settings for the system.
- [Manual] Allows you to individually set overclocking parameters.

BCLK Frequency [XXX]

Allows you to adjust the CPU and VGA frequency to enhance the system performance. Set **Ai Overclock Tuner** to [Manual] to show BCLK Frequency. Use the <+> and <-> keys to adjust the value. You can also key in the desired value using the numeric keypad. The values range from 80.0MHz to 300.0MHz.

CPU Ratio [Auto]

This item allows users adjust the maximum non-turbo CPU ratio. Use the <+> and <-> keys to adjust the value. The values range from 12 to 57 with 1 interval.

CPU1 Voltage [Auto]

Use the <+> and <-> keys to adjust the value. The values range from 0.800V to 1.520V with 0.005V interval.

CPU1 VSA Voltage [Auto]

Use the <+> and <-> keys to adjust the value. The values range from 0.800V to 1.520V with 0.005V interval.

CPU2 Voltage [Auto]

Use the <+> and <-> keys to adjust the value. The values range from 0.800V to 1.520V with 0.005V interval.

CPU2 VSA Voltage [Auto]

Use the <+> and <-> keys to adjust the value. The values range from 0.800V to 1.520V with 0.005V interval.

DRAM Voltage (CHA, CHB) [Auto]

Use the <+> and <-> keys to adjust the value. The values range from 1.20V to 1.52V with 0.005V interval.

DRAM Voltage (CHC, CHD) [Auto]

Use the <+> and <-> keys to adjust the value. The values range from 1.20V to 1.52V with 0.005V interval.

DRAM Voltage (CHE, CHF) [Auto]

Use the <+> and <-> keys to adjust the value. The values range from 1.20V to 1.52V with 0.005V interval.

DRAM Voltage (CHG, CHH) [Auto]

Use the <+> and <-> keys to adjust the value. The values range from 1.20V to 1.52V with 0.005V interval.

Clock Spread Spectrum [Disabled]

[Disabled] Enhances BCLK overlocking ability.

[Enabled] For [EMI] control.

Hyper Threading [Enabled]

This item allows you to enable/disable the Intel Hyper-Threading Technology function. Enable for Windows XP and Linux or disable for other OS. When disabled, only one thread per activated core is enabled.

Configuration options: [Disabled] [Enabled]

Active Processor Cores [All]

This item sets the number of cores to enable in each processor package.

Configuration options: [All] [1] [2] [3] [4] [5] [6] [7]

Limit CPUID Maximum [Disabled]

Setting this item to [Enabled] allows legacy operating system to boot even without support for CPUs with extended CUID functions.

Configuration options: [Disabled] [Enabled]

Execute Disable Bit [Enabled]

XP can prevent certain classes of malicious buffer overflow attacks when combined with a supporting OS (Windows Server 2003 SP1, Windows XP SP2, SuSE Linux 9.2, Redhat Enterprise 3 Update 3).

Configuration options: [Disabled] [Enabled]

Server Class [Custom]

Use Intel recommended prefetch settings.

Configuration options: [Enterprise] [High Performance(HPC)] [Custom]

You can only customize the items below when you enable the Server Class to **[Custom]**.

Hardware Prefetcher [Enabled]

This item allows you to turn on/off the mid level cache(L2) streamer prefetcher. Configuration options: [Disabled] [Enabled]

Adjacent Cache Line Prefetch [Enabled]

This item allows you to turn on/off prefetching of adjacent cache lines. Configuration options: [Disabled] [Enabled]

DCU Streamer Prefetcher [Enabled]

This item allows you to enable/disable prefetching of next L1 data line based upon multiple loads in same cache line. Configuration options: [Disabled] [Enabled]

DCU IP Prefetcher [Enabled]

This item allows you to enable/disable prefetching of next L1 line based upon sequential load history. Configuration options: [Disabled] [Enabled]

Intel Virtualization Technology [Enabled]

When this item is enabled, VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.

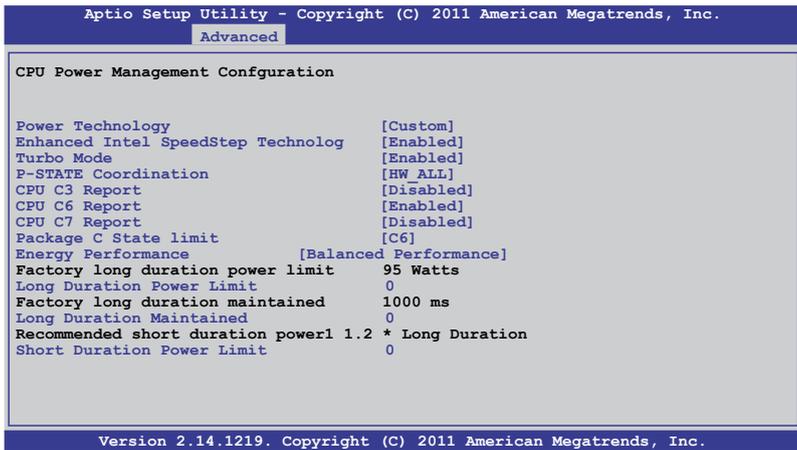

Configuration options: [Disabled] [Enabled]

Local APIC Mode [Auto]

Allows you to enable one or both the Advanced Programmable Interrupt Controllers (APIC) with APIC ID values greater than 254.

Configuration options: [Auto] [xAPIC] [x2APIC]

CPU Power Management Configuration

Power Technology [Custom]

This item allows you to enable power management features.

Configuration options: [Disable] [Energy Efficient] [Custom]

You can only customize the items below when you enable the Power Technology to **[Custom]**.

Enhanced Intel SpeedStep Technology [Enabled]

Enable Intel SpeedStep for allowing the system operation system to dynamically adjust processor voltage and cores frequency to result in decreased average power consumption and decreased average heat production.

Configuration options: [Disabled] [Enabled]

Turbo Mode [Enabled]

This item automatically allows processor cores to run faster than the base operating frequency if it's operating below power, current, and temperature specification limit.

Configuration options: [Disabled] [Enabled]

P-STATE Coordination [HW_ALL]

This item allows you to change P-STATE Coordination type.

Configuration options: [HW_ALL] [SW_ALL] [SW_ANY]

CPU C3 Report [Disabled]

This item allows you to enable/disable CPU C3(ACPI C2) report.

Configuration options: [Disabled] [Enabled]

CPU C6 Report [Enabled]

This item allows you to enable/disable CPU C6(ACPI C3) report.

Configuration options: [Disabled] [Enabled]

CPU C7 Report [Disabled]

This item allows you to enable/disable CPU C7(ACPI C3) report.

Configuration options: [Disabled] [Enabled]

Package C State limit [C6]

This item allows you to set package C State limit.

Configuration options: [C0] [C2] [C6] [C7] [No Limit]

Energy Performance [Balanced Performance]

This item allows you to optimize between performance and power savings.

Configuration options: [Performance] [Balanced Performance] [Balanced Energy] [Energy Efficient]

Factory long duration power limit 95Watts

Long Duration Power Limit 0

Allows you to set long duration power limit in watts. Use the <+> and <-> keys to adjust the value.

Factory long duration maintained 1000 ms

Long Duration Maintained 0

Allows you to set time window which the long duration power is maintained. Use the <+> and <-> keys to adjust the value.

Recommended short duration power1 1.2 * Long Duration

Short Duration Power Limit 0

Allows you to set short duration power limit in watts. Use the <+> and <-> keys to adjust the value.

Configuration options: [Disabled] [Enabled]

Intel(R) VT for Directed I/O Configuration

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.		
Advanced		
Intel(R) VT-d	[Enabled]	Enables or Disables BIOS ACPI Auto Configuration.

Intel(R) VT-d [Disabled]

This item allows you to enable or disable Intel VT-d.

Configuration options: [Enabled] [Disabled]

The following item appears only when you set **Intel(R) VT-d** to [Enabled].

Coherency Support [Disabled]

This item allows you to enable/disable VT-d Engine Coherency support.

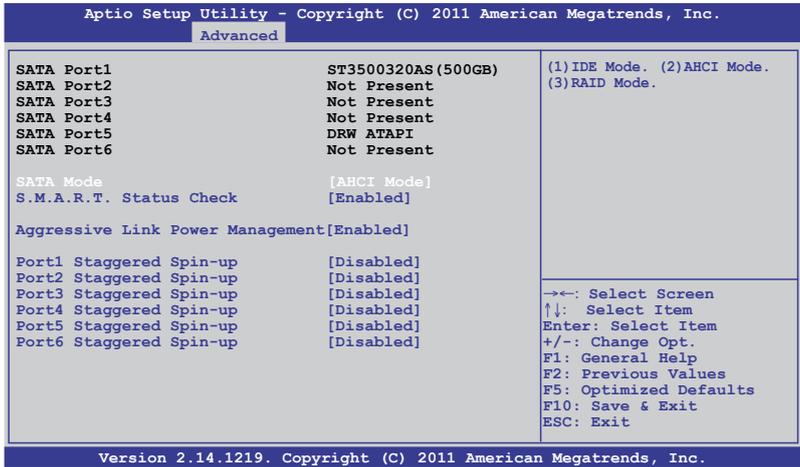

Configuration options: [Disabled] [Enabled]

ATS Support [Disabled]

This item allows you to enable/disable VT-d Engine address translation services (ATS) support.

Configuration options: [Disabled] [Enabled]

PCH SATA Configuration

SATA Mode [AHCI Mode]

This item allows you to set the SATA configuration.

Configuration options: [Disabled] [IDE Mode] [AHCI Mode] [RAID Mode]

- If you want to use the Serial ATA hard disk drives as Parallel ATA physical storage devices, set this item to [IDE Mode].
- If you want the Serial ATA hard disk drives to use the Advanced Host Controller Interface (AHCI), keep the default setting [AHCI Mode]. The AHCI allows the onboard storage driver to enable advanced Serial ATA features that increases storage performance on random workloads by allowing the drive to internally optimize the order of commands.
- If you want to create RAID sets with LSI MegaRAID utility, or Intel® Rapid Storage Technology Enterprise from the Serial ATA hard disk drives, set this item to [RAID Mode].

AHCI Mode

Allows you to enable the Aggressive Link Power Management and support Staggered Spin-up.

S.M.A.R.T. Status Check [Enabled]

S.M.A.R.T. (Self-Monitoring, Analysis and Reporting Technology) is a monitor system. When hard disk read/write errors occur, this feature allows the hard disk to report warning messages during the POST.

Configuration options: [Enabled] [Disabled]

Aggressive Link Power Management [Enabled]

Configuration options: [Enabled] [Disabled]

Port 1-6 Staggered Spin-up [Disabled]

Configuration options: [Enabled] [Disabled]

IDE Mode

Allows you to to enable or disable the SATA controllers.

Serial-ATA Controller 0 [Enhanced]

This item appears only when you set the **SATA Mode** item to [IDE Mode]. Set to [Enhanced] to support two SATA 6.0 Gb/s and two SATA 3.0 Gb/s devices. Set to [Compatible] when using Windows 98/NT/2000/MS-DOS. Up to four SATA devices are supported under these operating systems.

Configuration options: [Disabled] [Enhanced] [Compatible]

Serial-ATA Controller 1 [Enhanced]

This item appears only when you set the SATA Mode item to [IDE Mode]. Set to [Enhanced] to support two SATA 3.0 Gb/s devices.

Configuration options: [Disabled] [Enhanced]

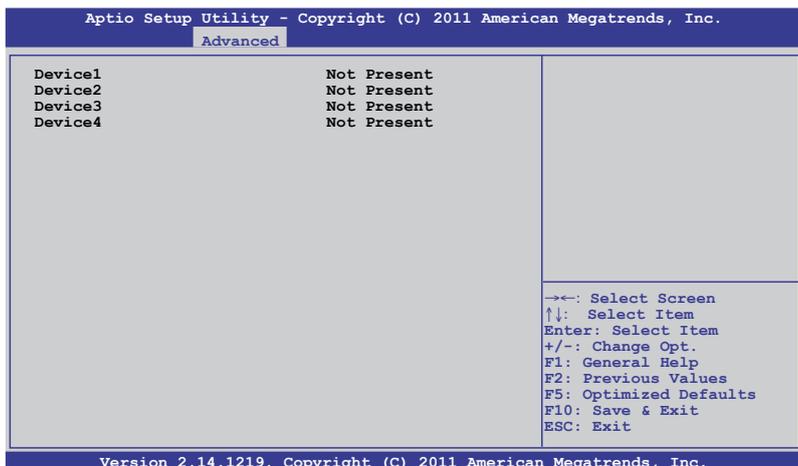

S.M.A.R.T. Status Check [Enabled]

S.M.A.R.T. (Self-Monitoring, Analysis and Reporting Technology) is a monitor system. When read/write of your hard disk errors occur, this feature allows the hard disk to report warning messages during the POST.

Configuration options: [Enabled] [Disabled]

PCH SCU Configuration

This menu automatically detects and displays Device 1-4.

PCI Subsystem Settings

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.

PCI ROM Priority [EFI Compatible ROM]

This item specifies which PCI option ROM to launch between multiple option ROMs (Legacy and EFI Compatible).

Configuration options: [Legacy ROM] [EFI Compatible ROM]

PCI Latency Timer [32 PCI Bus Clocks]

This item configures the value to be programmed into PCI Latency Timer Register.
 Configuration options: [32 PCI Bus Clocks] [64 PCI Bus Clocks] [96 PCI Bus Clocks] [128 PCI Bus Clocks] [160 PCI Bus Clocks] [192 PCI Bus Clocks] [224 PCI Bus Clocks] [248 PCI Bus Clocks]

VGA Palette Snoop [Disabled]

This item enables or disables VGA palette register snooping.
 Configuration options: [Disabled] [Enabled]

PERR# Generation [Disabled]

This item enables or disables PCI device to generate PERR#.
 Configuration options: [Disabled] [Enabled]

SERR# Generation [Disabled]

This item enables or disables PCI device to generate SERR#.
 Configuration options: [Disabled] [Enabled]

PCI Express Settings

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.	
Advanced

PCIe7 Option Rom [Enabled]

Configuration options: [Disabled] [Enabled]

USB Configuration

Legacy USB Support [Enabled]

This item enables or disables Legacy USB device support.

Configuration options: [Enabled] [Disabled] [Auto]

USB3.0 Support [Enabled]

This item enables or disables USB3.0 (XHCI) Controller support.

Configuration options: [Disabled] [Enabled]

XHCI Hand-off [Enabled]

This is a workaround for OSeS without XHCI ownership change should be claimed by XHCI driver.

Configuration options: [Disabled] [Enabled]

EHCI Hand-off [Disabled]

This is a workaround for OSeS without EHCI ownership change should be claimed by EHCI driver.

Configuration options: [Disabled] [Enabled]

USB Hardware Delays and Time-outs

USB transfer time-out [20 sec]

This item sets the time-out value for control, bulk, and interrupt transfer.

Configuration options: [1 sec] [5 sec] [10 sec] [20 sec]

Device reset time-out [20 sec]

USB mass storage device Start Unit command time-out.

Configuration options: [10 sec] [20 sec] [30 sec] [40 sec]

Device power-up delay [Auto]

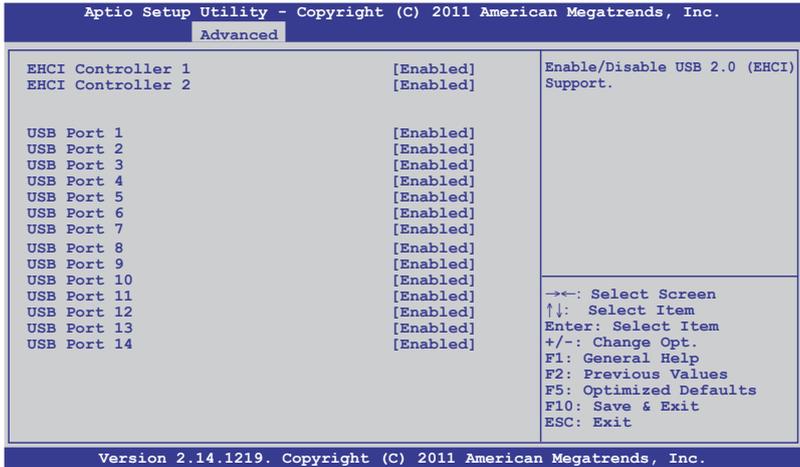

This item sets the maximum time the device will take before it properly reports itself to the Host Controller. 'Auto' uses default values: for a Root port, it is 100ms; for a Hub port, the delay is taken from Hub descriptor.

Configuration options: [Manual] [Auto]

Device power-up delay in seconds [X]

This item appears only when you set the **Device power-up delay** item to [Manual]. Use the <+> and <-> keys to adjust the value. The values range from 1 to 40 with a one-second interval.

USB Ports Configuration

EHCI Controller 1/2 [Enabled]

This item allows you to enable or disable USB 2.0 (EHCI) Support. If we disable the EHCI Controller in BIOS > South Bridge > USB configuration, the USB device will all disable in OS.

Configuration options: [Disabled] [Enabled]

USB Port 1/14 [Enabled]

These items allow you to enable or disable USB ports 1 to 14.

Configuration options: [Disabled] [Enabled]

ACPI Settings

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.	
Advanced	
ACPI Settings	Enables or Disables BIOS ACPI Auto Configuration.
Enable ACPI Auto Configuration [Disabled]	
Enable Hibernation [Enabled]	
ACPI Sleep State [S3 (Suspend to RAM)]	
Lock Legacy Resources [Disabled]	

Enable ACPI Auto Configuration [Disabled]

Allows you to enable or disable BIOS ACPI Auto Configuration.

Configuration options: [Disabled] [Enabled]

The following item appears only when you set **Enabled ACPI Auto Configuration** to [Disabled].

Enable Hibernation [Enabled]

Enables or disables system ability to Hibernate (OS/S4 sleep state). This option may be not effective with some OS.

Configuration options: [Disabled] [Enabled]

ACPI Sleep State [S3 (Suspend to RAM)]

Allows you to set the ACPI Sleep State.

Configuration options: [Suspend Disabled] [S1 (CPU Stop Clock)] [S3 (Suspend to RAM)]

Lock Legacy Resources [Disabled]

Allows to enable or disable Lock Legacy Resources.

Configuration options: [Disabled] [Enabled]

4.5.9 WHEA Configuration

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.	
Advanced	
WHEA Support [Enabled]	Enable or disable Windows Hardware Error Architecture.

WHEA Support [Enabled]

Allows you to enable or disable the Windows Hardware Error Architecture support.

Configuration options: [Disabled] [Enabled]

APM setting

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.			
Advanced			
Restrore	AC	Power Loss	[Last State]
Power On	By	PS/2 Keyboard	[Disabled]
Power On	By	PS/2 Mouse	[Disabled]
Power On	By	PCIE	[Disabled]
Power On	By	Ring	[Disabled]
Power On	By	RTC	[Disabled]
			Specify what state to go to when power is re-applied after a power failure (G3 state).

Restore AC Power Loss [Last State]

When set to [Power Off], the system goes into off state after an AC power loss. When set to [Power On], the system will reboot after an AC power loss. When set to [Last State], the system goes into either off or on state, whatever the system state was before the AC power loss.

Configuration options: [Power Off] [Power On] [Last State]

Power On By PS/2 Keyboard [Disabled]

[Disabled] Disables the PS/2 Keyboard from generating a wake event.

[Enabled] Enables the PS/2 Keyboard to generate a wake event.

Power On By PS/2 Mouse [Disabled]

[Disabled] Disables the PS/2 Mouse from generating a wake event.

[Enabled] Enables the PS/2 Mouse to generate a wake event.

Power On By PCIE [Disabled]

[Disabled] Disables the PCIE devices from generating a wake event.

[Enabled] Enables the PCIE devices to generate a wake event.

Power On By Ring [Disabled]

[Disabled] Disables the Ring devices from generating a wake event.

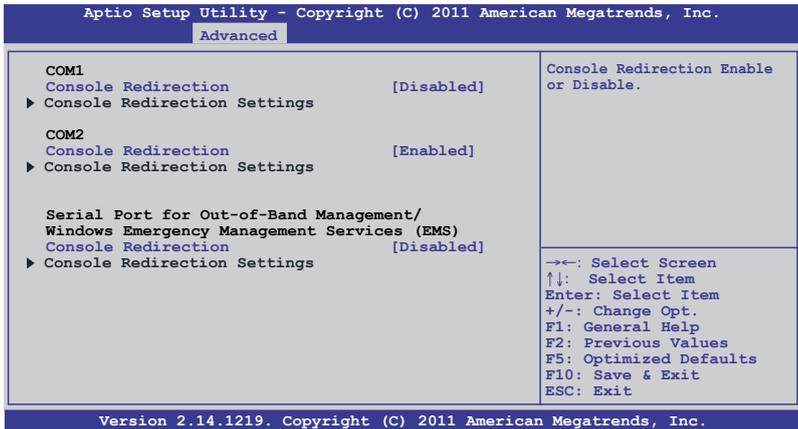

[Enabled] Enables the Ring devices to generate a wake event.

Power On By RTC [Disabled]

[Disabled] Disables RTC from generating a wake event.

[Enabled] When set to [Enabled], the items **RTC Alarm Date (Days)** and **Hour/Minute/Second** will become user-configurable with set values.

Serial Port Console Redirection

COM1

Console Redirection [Disabled]

This item enables or disables the console redirection feature.

Configuration options: [Disabled] [Enabled]

The following item appears only when you set **Console Redirection** to [Enabled].

Console Redirection Settings

This item becomes configurable only when you enable the **Console Redirection** item. The settings specify how the host computer and the remote computer (which the user is using) will exchange data. Both computers should have the same or compatible settings.

Terminal Type [VT-UTF8]

Allows you to set the terminal type.

[VT100] ASCII char set

[VT100+] Extends VT100 to support color, function keys, etc.

[VT-UTF8] Uses UTF8 encoding to map Unicode chars onto 1 or more bytes

[ANSI] Extended ASCII char set

Bits per second [57600]

Selects serial port transmission speed. The speed must be matched on the other side. Long or noisy lines may require lower speeds.

Configuration options: [9600] [19200] [38400] [57600] [115200]

Data Bits [8]

Configuration options: [7] [8]

Parity [None]

A parity bit can be sent with the data bits to detect some transmission errors.

[Mark] and [Space] parity do not allow for error detection.

[None] No parity bit

[Even] Parity bit is 0 if the num of 1's in the data bits is even

[Odd] Parity bit is 0 if num of 1's in the data bits is odd

[Mark] Parity bit is always 1

[Space] Parity bit is always 0

Stop Bits [1]

Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning.) The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit.

Configuration options: [1] [2]

Flow Control [VT100]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port.

Configuration options: [VT100] [Hardware RTS/CTS] [Software Xon/Xoff]

Recorder Mode [Disabled]

With this mode enabled, only text will be sent. This is to capture Terminal data.

Configuration options: [Disabled] [Enabled]

Recorder 100x31 [Disabled]

This item allows you to enable or disable extended terminal resolution.

Configuration options: [Disabled] [Enabled]

Legacy OS Redirction Resolution [80x24]

This item configures the number of rows and columns supported on legacy OS.

Configuration options: [80x24] [80x25]

COM2

Console Redirection [Disabled]

Enables or disables the console redirection feature.

Configuration options: [Disabled] [Enabled]

Console Redirection Settings

Please refer to the description of the **Console Redirection Settings** item under **COM1** for details.

Serial Port for Out-of-Band Management/ Windows Emergency Management Services (EMS)

Console Redirection [Disabled]

Enables or disables the console redirection feature.

Configuration options: [Disabled] [Enabled]

The following item appears only when you set **Console Redirection** to [Enabled].

Console Redirection Settings

Out-of-Band Mgmt Port [COM1]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port.

Configuration options: [COM1] [COM2]

Terminal Type [VT-UTF8]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port.

Configuration options: [VT100] [VT100+] [VT-UTF8] [ANSI]

Bits per second [115200]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port.

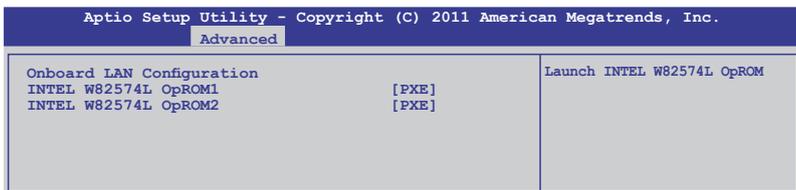

Configuration options: [9600] [19200] [57600] [115200]

Flow Control [VT100]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port.

Configuration options: [VT100] [Hardware RTS/CTS] [Software Xon/Xoff]

Onboard LAN Configuration

INTEL W82574L OpROM1 [PXE]

This item launched INTEL W82574L OpROM1.

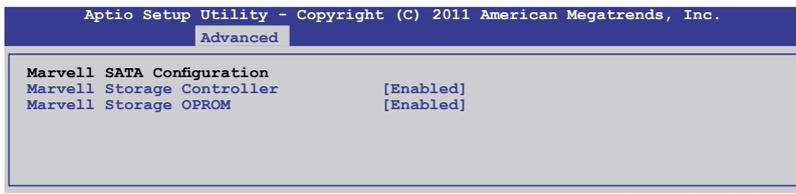

Configuration options: [Disabled] [PXE] [iSCSI]

INTEL W82574L OpROM2 [PXE]

This item launched INTEL W82574L OpROM2.

Configuration options: [Disabled] [PXE] [iSCSI]

Marvell Storage Controller [Enabled]

Configuration options: [Disabled] [Enabled]

Marvell Storage OPROM [Enabled]

Configuration options: [Disabled] [Enabled]

Onboard Devices Configuration

Serial Port1/2 Configuration

This item allows you to set parameters of serial ports 1 and 2.

Serial Port [Enabled]

This item allows you to enable or disable the Serial Port.

Configuration options: [Disabled] [Enabled]

Device Mode [Standard Serial Port Mode]

This item allows you to change the serial port mode.

Configuration options: [Standard Serial Port Mode]

VIA 1394 Controller [Enabled]

This item allows you to enable or disable VIA 1394.

Configuration options: [Disabled] [Enabled]

Asmedia USB 3.0 Controller [Enabled]

This item allows you to enable or disable Asmedia USB 3.0.

Configuration options: [Disabled] [Enabled]

Asmedia USB 3.0 Battery Charging S [Enabled]

This item allows you to enable or disable Asmedia USB 3.0 Battery Charging S.

Configuration options: [Disabled] [Enabled]

Runtime Error Logging

Runtime Error Logging Support [Disabled]

This item allows you to enable or disable Runtime Error Logging Support.

Configuration options: [Disabled] [Enabled]

The following item appears only when you set **Runtime Error Logging Support** to [Enabled].

PCI Error Logging Support [Disabled]

This item allows you to enable or disable PCI Error Logging.

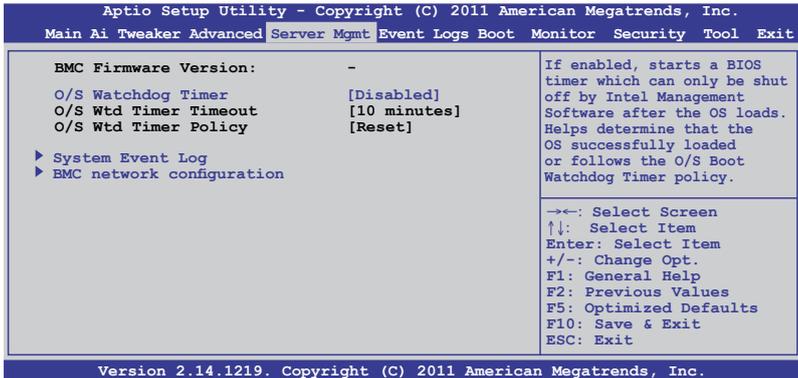

Configuration options: [Disabled] [Enabled].

Server Management menu

The Server Management menu displays the server management status, and allows you to change the settings.

The Server Management menu appears only when you install ASMB card on the motherboard.

O/S Watchdog Timer [Disabled]

If enabled, starts a BIOS timer which can only be shut off by Intel Management Software after the OS loads. Helps determine that the OS successfully loaded or follows the **O/S Boot Watchdog Timer Policy**.

Configuration options: [Enabled] [Disabled]

O/S Wtd Timer Timeout [10 minutes]

Allows to configure the length of the O/S Boot Watchdog Timer. Not available if **O/S Boot Watchdog Timer** is disabled.

Configuration options: [5 minutes] [10 minutes] [15 minutes] [20 minutes]

O/S Wtd Timer Policy [Reset]

Allows to configure how the system should respond if the **OS Boot Watchdog Timer** expires. Not available if **O/S Boot Watchdog Timer** is disabled.

Configuration options: [Do Nothing] [Reset] [Power Down]

System Event Log

Enabling/Disabling Options

Smbios Event Log [Enabled]

Change this to enable or disable all features of Smbios Event Logging during boot.

Configuration options: [Disabled] [Enabled]

Erasing Settings

Erase Event Log [No]

Choose options for erasing Smbios Event Log. Erasing is done prior to any logging activation during reset.

Configuration options: [No] [Yes, Next reset] [Yes, Every reset]

When Log is Full [Do Nothing]

This item allows you to choose options for reactions to a full Smbios Event Log.

Configuration options: [Do Nothing] [Erase Immediately]

Smbios Event Log Standard Settings

Log System Boot Event [Disabled]

This item allows you to choose options to enable/disable logging of System boot event.

Configuration options: [Enabled] [Disabled]

MECI [1]

This item allows you to set Multiple Event Count Increment (MECI). The number of occurrences of a duplicate event that must pass before the multiple-event counter associated with the log entry is updated, specified as a numeric value in the range 1 to 255.

METW [60]

This item allows you to set Multiple Event Time Windows (METW). The number of minutes which must pass between duplicate log entries which utilize a multiple-event counter. The value ranges from 0 to 99 minutes.

Custom Options

Log OEM Codes [Enabled]

This item allows you to enable or disable the logging of EFI Status Codes as OEM Codes (if not already converted to legacy).

Configuration options: [Disabled] [Enabled]

Convert OEM Codes [Disabled]

This item allows you to enable or disable the converting of EFI Status Codes to Standard Smbios Types (Not all may be translated).

Configuration options: [Disabled] [Enabled]

Boot menu

The Boot menu items allow you to change the system boot options.

```

Use the scroll to view items.

CPU 1/2; TR1 1/2 Temperature [xxx°C/xxx°F]

The onboard hardware monitor automatically detects and displays the CPU and motherboard component temperatures. Select **Ignore** if you do not wish to display the detected temperatures.

CPU FAN1/2 Speed; FRNT FAN1-4 Speed; REAR FAN1/2 Speed [xxxx RPM] or [Ignore] / [N/A]

The onboard hardware monitor automatically detects and displays the speed of CPU fans, front fans, and rear fan in rotations per minute (RPM). If the fan is not connected to the motherboard, the field shows **N/A**.

+VTT_CPU Voltage, VCORE1/2 Voltage, VSA_CPU1/2 +VDDQ_AB_CPU1 Voltage, +VDDQ_CD_CPU1 Voltage, +VDDQ_EF_CPU2 Voltage, +VDDQ_GH_CPU2 Voltage, +5VSB Voltage, +5V Voltage, +12V Voltage, +3.3V Voltage, VBAT Voltage, +3.3VSB Voltage

The onboard hardware monitor automatically detects the voltage output through the onboard voltage regulators.

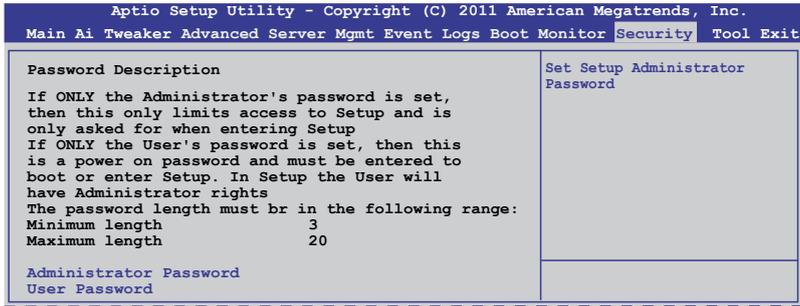

FAN Speed Control [Generic Mode]

This item allows you to configure the Smart Fan feature that smartly adjusts the fan speeds for more efficient system operation.

Configuration options: [Generic Mode] [High Speed Mode] [Full Speed Mode]

Security menu

The Security menu items allow you to change the system security settings.

If you have forgotten your BIOS password, erase the CMOS Real Time Clock (RTC) RAM to clear the BIOS password. See section 2.6 Jumpers for information on how to erase the RTC RAM.

Administrator Password

If you have set an administrator password, we recommend that you enter the administrator password for accessing the system. Otherwise, you might be able to see or change only selected fields in the BIOS setup program.

To set an administrator password:

1. Select the **Administrator Password** item and press <Enter>.
2. From the **Create New Password** box, key in a password, then press <Enter>.
3. Confirm the password when prompted.

To change an administrator password:

1. Select the **Administrator Password** item and press <Enter>.
2. From the **Enter Current Password** box, key in the current password, then press <Enter>.
3. From the **Create New Password** box, key in a new password, then press <Enter>.
4. Confirm the password when prompted.

To clear the administrator password, follow the same steps as in changing an administrator password, but press <Enter> when prompted to create/confirm the password.

User Password

If you have set a user password, you must enter the user password for accessing the system.

To set a user password:

1. Select the **User Password** item and press <Enter>.
2. From the **Create New Password** box, key in a password, then press <Enter>.
3. Confirm the password when prompted.

To change a user password:

1. Select the **User Password** item and press <Enter>.
2. From the **Enter Current Password** box, key in the current password, then press <Enter>.
3. From the **Create New Password** box, key in a new password, then press <Enter>.
4. Confirm the password when prompted.

To clear the user password, follow the same steps as in changing a user password, but press <Enter> when prompted to create/confirm the password.

Tool menu

The Tool menu items allow you to configure options for special functions. Select an item then press <Enter> to display the submenu.

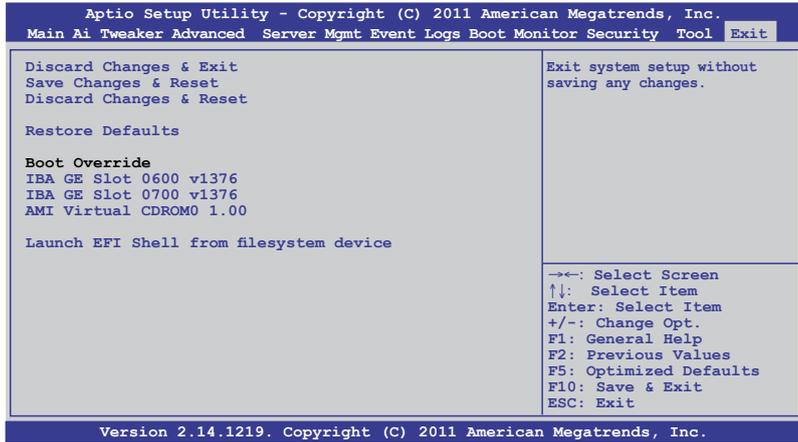

EZ Flash 2 Utility

This item allows you to run EZ Flash BIOS ROM Utility when you press <Enter>.

Exit menu

The Exit menu items allow you to save or discard your changes to the BIOS items.

Pressing <Esc> does not immediately exit this menu. Select one of the options from this menu or <F10> from the legend bar to exit.

Discard Changes & Exit

This option allows you to exit the Setup program without saving your changes. When you select this option or if you press <Esc>, a confirmation window appears. Select **Yes** to discard changes and exit.

Save Changes & Reset

Once you are finished making your selections, choose this option from the Exit menu to ensure the values you selected are saved. When you select this option or if you press <F10>, a confirmation window appears. Select **Yes** to save changes and exit.

Discard Changes & Reset

This option allows you to reset the Setup program without saving your changes. When you select this option, a confirmation window appears. Select **Yes** to discard changes and reset.

Restore Defaults

This option allows you to restore/load default values for all the setup options. When you select this option, a confirmation window appears. Select **Yes** to load optimized defaults.

Boot Override

These items display the available devices. The device items that appear on the screen depend on the number of devices installed in the system. Click an item to start booting from the selected device.
