myTREK DEVICE OVERVIEW & CHARGING

HOW *SCOSCHE®* myTREK WORKS
Blood is constantly moving through the human body and consequently the amount of blood under the skin at any given point is constantly changing. The main forces of blood movement are the heart pumping and physical body movements. *SCOSCHE®* **myTREK** armband detects blood movement by shining light onto the skin and measuring the amount of light that is absorbed by the skin.

In addition myTREK uses an accelerometer similar to what is used in popular gaming controllers to detect body movement and then subtracts the movement from the light measurement. All of the data collected from this process is sent to the user's iPhone or iPod touch for further filtering and signal processing. The final output is displayed on the iPhone or iPod touch as the users pulse.

SENSOR ACCURACY
Testing within Scosche Industries has shown the average pulse rate to be within +/- 3% of a chest strap.

myTREK's USE OF GPS
 myTREK uses the GPS that is built into iPhone. By knowing a users position the myTREK App can calculate distance traveled and average speed during a workout. The higher the GPS signal strength the more accurate the results. The myTREK App has a GPS signal strength indicator with the following levels of accuracy:
- No blue dots means the GPS accuracy is less than 50 meters and the App will not calculate distance or speed during the workout.
- 1 Blue dot means the GPS accuracy is greater than 50 meters.
- 2 Blue dots means the GPS accuracy is greater than 30 meters.
- 3 Blue dots means the GPS accuracy is greater than 10 meters.

CHARGING
Charge the *SCOSCHE®* **myTREK** for 2 hours or until a solid green light indicates the unit is fully charged.
1. Attach the charging base to the *SCOSCHE®* **myTREK** unit (see Figure 1).
