

Gigaset

C610 IP - C610 A IP

Congratulations

By purchasing a Gigaset, you have chosen a brand that is fully committed to sustainability. This product's packaging is eco-friendly!

To learn more, visit www.gigaset.com.

GIGASET. INSPIRING CONVERSATION.
MADE IN GERMANY

Gigaset C610/610A IP – your perfect companion

... with impressive internal qualities. The large TFT display, user-friendly keypad and clearly laid out menu are very simple to use. Your Gigaset can do a lot more than just make calls:

Ethernet port

Connect your Gigaset to the Internet and your PC via Ethernet. Use your public and private directories on the Internet (→ [page 81](#)). Update the directory on your Gigaset and your directory on the PC simultaneously.

Directory for 150 vCards – appointments

Save phone numbers and other data to the local directory (→ [page 73](#)). Enter anniversaries in the directory and set reminders (→ [page 79](#)).

Use your Gigaset as a PABX

Register up to six handsets and use your Gigaset's three answering machines. Assign each device its own phone number.

It's easy to configure your Gigaset thanks to the wizards

They help you to configure the VoIP connections for your phone and to assign the receive and send connections to the registered handsets and (for the Gigaset C610A IP) to the integrated answering machines (→ [page 23](#)).

Go online with your Gigaset

Use your phone's Info Center and have information specifically provided for the phone from the Internet shown on the display (→ [page 111](#)).

Other practical information

Transfer the directory from an existing Gigaset handset (→ [page 77](#)), use the programmable digit and display keys (→ [page 150](#)) for quick dial or quick access to important functions, skip back five seconds when listening to answering machine messages to repeat the last section (→ [page 121](#)), use your phone to read your e-mail (without a PC).

Environment

Gigaset Green Home – be environmentally aware when using your phone. For details of our ECO DECT products, visit www.gigaset.com/service.

Gigaset C610/610A IP – your perfect companion

For more information about your phone, visit www.gigaset.com/gigasetC610ip or www.gigaset.com/gigasetC610Aip.

After purchasing your Gigaset phone, please register it at www.gigaset.com/service – this will ensure any questions you may have or warranty services you request are dealt with even faster!

Have fun using your new phone!

Please note

To change the display language, proceed as follows (→ [page 153](#)):

- ▶ Press right on the control key .
- ▶ Press left on the control key  to select the  symbol and confirm the selection with the **right display key**.
- ▶ Press the bottom of the control key  three times and confirm with the **right display key**.
- ▶ Press the bottom of the control key  until the correct language is selected. Then press the **right display key**.

Handset at a glance

- 1 **Display** in idle status
- 2 **Battery charge status** (→ [page 38](#))
- 3 **Display keys** (→ [page 42](#))
- 4 **Message key** (→ [page 71](#))
Access to call and message lists;
Flashing: new message or new call
- 5 **End call key, On/Off key**
End a call;
cancel function;
go back one menu level (press briefly);
return to idle status (press and hold);
handset on/off (press and hold in idle status)
- 6 **Hash key**
Keypad lock on/off (press and hold in
idle status);
toggles between upper/lower case and digits
- 7 **Mute key** (→ [page 59](#))
Muting the microphone
- 8 **Microphone**
- 9 **Recall key**
- Consultation call (flash)
- Insert a dialling pause (press and hold)
- 10 **Star key**

- 13 **Talk key**
Flashing: incoming call;
accept call;
open redial list (press briefly);
open connection list (press and hold);
→ [page 51](#));
when writing an SMS: send SMS
- 14 **Speaker key**
Switch between earpiece and speaker mode
- 15 **Control key** (→ [page 41](#))
- 16 **Signal strength** (→ [page 38](#))
Green: Eco Mode (→ [page 136](#)) activated

Display icons

The following icons are displayed dependent on the settings and the operating status of your telephone:

Signal strength (→ [page 136](#))
or Eco Mode+ icon (→ [page 136](#))

Ringtones switched off (→ [page 159](#))

Battery charging (→ [page 38](#))

Battery charge status (→ [page 38](#))

Alarm clock switched on and wake-up time set (→ [page 138](#))

Current time (→ [page 39](#))

Current day and month (→ [page 39](#))

Name of the handset (→ [page 149](#))

Number of new messages:

- ◆ On the answering machine/network mailbox (→ [page 69](#))
- ◆ In the missed calls list (→ [page 71](#))
- ◆ In the SMS list (→ [page 98](#)), the e-mail list (→ [page 107](#))
- ◆ In the missed alarms list (→ [page 72](#))

Signalling

External call (→ [page 54](#))

Alarm clock (→ [page 138](#))

Internal call (→ [page 146](#))

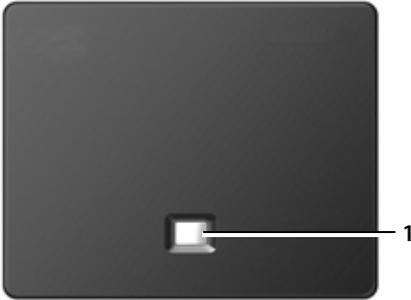

Anniversary (→ [page 80](#))

Answering machine is recording (→ [page 121](#))

The base at a glance

Base key

1 Paging key

Lights up:

LAN connection active (phone is connected to router)

Flashes:

Data transfer to LAN connection

Press **briefly**:

start paging, display IP address on handset

Press and **hold**:

set base to registration mode

Safety precautions

Warning

Read the safety precautions and the user guide before use.

Explain their content and the potential hazards associated with using the telephone to your children.

Use only the power adapter supplied, as indicated on the underside of the base or charger.

Use only the cables supplied for fixed line and LAN connection and connect these to the intended port only.

Use only **rechargeable batteries** that correspond to the **specification** (→ **page 213**). Never use a conventional (non-rechargeable) battery or other battery types as this could result in significant health risks and personal injury.

Using your telephone may affect nearby medical equipment. Be aware of the technical conditions in your particular environment, e.g., doctor's surgery.

If you use a medical device (e.g., a pacemaker), please contact the device manufacturer. They will be able to advise you regarding the susceptibility of the device to external sources of high frequency energy. Please refer to the "Appendix" chapter for the specifications of this Gigaset product.

Do not hold the rear of the handset to your ear when it is ringing or when speaker mode is activated. Otherwise you risk serious and permanent damage to your hearing.

Your Gigaset is compatible with the majority of digital hearing aids on the market. However, perfect function with all hearing aids cannot be guaranteed.

The handset may cause interference in analogue hearing aids (humming or whistling) or cause them to overload. If you require assistance, please contact the hearing aid supplier.

Do not install the base or charger in bathrooms or shower rooms. The base and charger are not splashproof (→ **page 213**).

Do not use your phone in environments with a potential explosion hazard (e.g., paint shops).

If you give your phone to a third party, make sure you also give them the user guide.

Remove faulty bases from use or have them repaired by our Service team, as these could interfere with other wireless services.

Please note

- ◆ Please note that only terminals that are operated in-house (inside buildings) may be connected to the analogue TAE connection.
- ◆ Not all of the functions described in this user guide are available in all countries.
- ◆ The device cannot be used in the event of a power failure. It is also **not** possible to transmit **emergency calls**.

First steps

Checking the package contents

- 1 Gigaset C610 IP or C610A IP base
- 2 One power cable for connecting the base to the mains power supply
- 3 One phone cable to connect the base to the analogue fixed line (TAE RJ11 6-pole; flattened cable) 3a or 3b, depending on the country/provider
- 4 One Ethernet (LAN) cable (Cat 5 with 2 RJ45 modular jacks) for connecting the base to a router (LAN/Internet)
- 5 **One Gigaset C610H handset**
- 6 Two batteries for the handset (uncharged)
- 7 One battery cover for the handset
- 8 One belt clip for the handset
- 9 One handset charger
- 10 One power adapter for connecting the charger to the mains power supply
- 11 One quick guide and a CD

Firmware updates

This user guide describes the functions of your phone from firmware version 020 onwards.

Whenever there are new or improved functions for your Gigaset, firmware updates are made available for you to download to your base (→ **page 169**). If this results in operational changes for using your phone, a new version of this user guide or the necessary amendments will be published on the Internet at www.gigaset.com.

Select the product to open the relevant product page for your base, where you will find a link to the user guide.

To find out what version of firmware is currently loaded, → **page 211**.

Setting up the handset for use

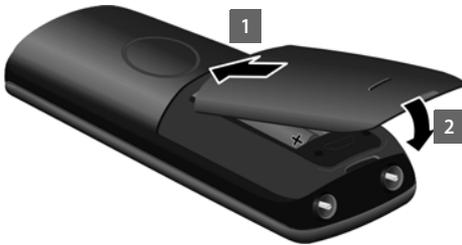

The display is protected by a plastic film.
Please remove the protective film!

Inserting the batteries and closing the battery cover

Warning

Use only rechargeable batteries (→ [page 213](#)) recommended by Gigaset Communications GmbH i.e., never use a conventional (non-rechargeable) battery, as this could result in significant health risks and personal injury. For example, the outer casing of the batteries could be damaged or the batteries could explode. The phone could also malfunction or be damaged as a result of using batteries that are not of the recommended type.

- ▶ Insert the batteries with the polarity in the correct direction. The polarity is indicated in/on the battery compartment.

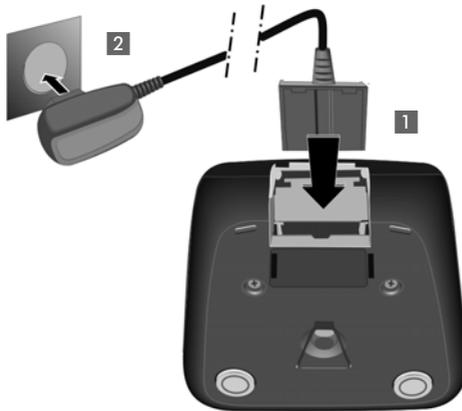

- ▶ First insert the battery cover at the top **1**.
- ▶ Then press the cover **2** until it clicks into place.

To open the battery cover, for instance to change the batteries:

- ▶ Insert a coin into the cavity on the casing, then pull the battery cover in an upward direction.

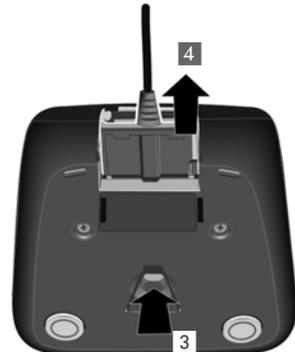

Connecting the charger

- ▶ Connect the flat plug from the power adapter **1**.
- ▶ Plug the power adapter into the plug socket **2**.

To disconnect the plug from the charger, press the release button **3** and disconnect the plug **4**.

Placing the handset in the charger

- ▶ Place the handset in the charger with its **display facing forward**.

Each handset is registered with the base at the factory. You do not need to register the handset again. If you wish to use your handset with a different base or use additional handsets with your base, you have to register the handset manually

→ [page 143](#).

To charge the batteries, leave the handset in the charger.

Please note

Only place the handset in the charger that is intended for it.

Initial charging and discharging of the batteries

The correct charge level can only be displayed if the batteries are first fully charged and discharged.

- ▶ Place the handset in the charger for ten hours.
- ▶ Then remove the handset from the charger and do not replace it until the batteries are fully discharged.

Please note

- ◆ After the first battery charge **and** discharge, you may place your handset in the charger after every call.
- ◆ Always repeat the charging and discharging procedure if you remove the batteries from the handset and reinsert them.
- ◆ The batteries may warm up during charging. This is not dangerous.
- ◆ After a while, the charge capacity of the batteries will decrease for technical reasons.

Installing the base

The base is designed for use in dry rooms in a temperature range of +5°C to +45°C.

- ▶ Set up the base at a central point in the building.

Please note

Pay attention to the range of the base. This is up to 300 m in unobstructed outdoor areas and up to 50 m inside buildings. The range is reduced when **Eco Mode** is activated (→ [page 136](#)).

The phone's feet do not usually leave any marks on surfaces. However, due to the multitude of different varnishes and polishes used on today's furnishings, the occurrence of marks on the surfaces cannot be completely ruled out.

Warning

- ◆ Never expose the telephone to any of the following: heat sources, direct sunlight or other electrical appliances.
- ◆ Protect your Gigaset from moisture, dust, corrosive liquids and fumes.

Connecting the base

The following diagram is an overview of all connections for your base. The individual connections are described in detail below. In order for you to make calls on your phone via the fixed line and VoIP, you need to connect the base to the fixed line and Internet (see diagram below).

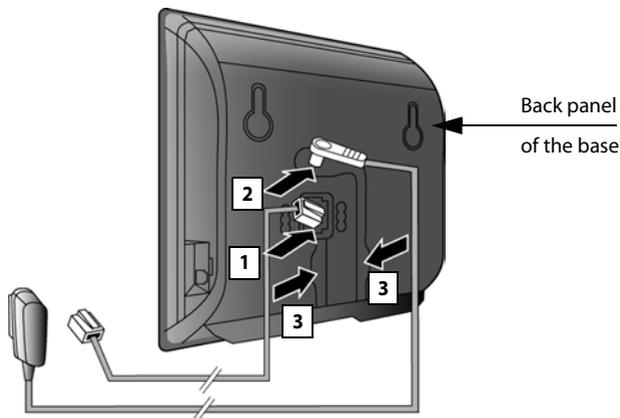

Follow the steps in the order given below:

- 1 Connect the phone and power cables to the base.
- 2 Connect the base to the telephone network and the mains power supply.
- 3 Connect the base to the router for accessing the Internet (via router and modem or via router with integrated modem) and for configuring the base via the Web configurator.
- 4 Connect the PC to the router.

You can then connect a wire-bound headset to the handset.

1. Connecting the phone and power cables to the base

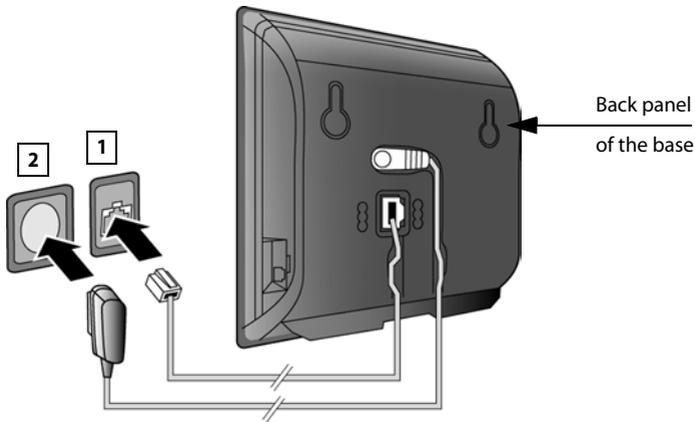

- 1 Insert the phone cable (TAE connection cable with RJ11 plug) into the lower connection socket at the rear of the base.
- 2 Insert the power cable of the power adapter into the upper connection socket at the rear of the base.
- 3 Push both cables into the appropriate cable channels.

Warning

Use only the power and telephone cables **supplied**. Pin connections on telephone cables can vary (pin connections → [page 215](#)).

2. Connecting the base to the fixed line and the mains power supply

- 1 Insert the phone cable into the fixed line connection socket.
- 2 Then insert the power adapter into the mains socket.

Warning

Keep the power cable **plugged in at all times** for operation, as the phone does not work without a mains connection.

You can now use your phone to make calls via the fixed line and can be reached on your fixed line number.

GigasetC610A IP: an answering machine on the base is set with a pre-recorded announcement in answer and record mode (→ [page 121](#)).

3. Connecting the base with a router (Internet)

Data protection notice

When the device is connected to the router, it automatically contacts the Gigaset support server to make it easier for you to configure the devices and to enable communication with the Internet services.

For this purpose, every device sends the following device-specific information once every day:

- ◆ Serial number/item number
- ◆ MAC address
- ◆ Private IP address for the Gigaset in the LAN/its port numbers
- ◆ Device name
- ◆ Software version

On the support server, this information is linked to the existing device-specific information:

- ◆ Gigaset.net phone number
- ◆ System-related/device-specific passwords

Further information about the Gigaset.net service data saved can be found at www.gigaset.net/privacy-policy

Your base features a LAN connection that you can use to connect the base to a router.

Connection to a router is required for Internet telephony VoIP (Voice over Internet Protocol). You can set up and configure up to six accounts (VoIP phone numbers) from one or more VoIP provider(s) on the phone.

You also need a connection to the router for the following features on your phone:

- ◆ You want to be notified as soon as new software is available for your phone on the Internet.
- ◆ You want the date and time on your phone to be updated by a time server on the Internet.
- ◆ You want to use info services and/or online directories on your phone.

You can also connect a PC to the router if you want to set your phone via its Web configurator.

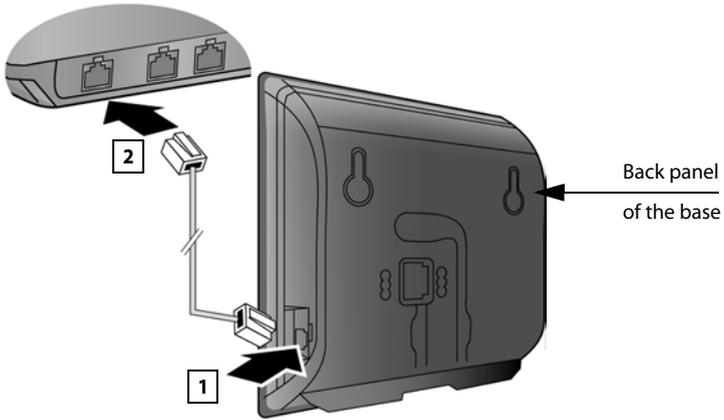

For Internet access you need a router connected to the Internet via a modem (this may be integrated in the router).

Please note

For telephony via the Internet, you need a broadband Internet connection (e.g., DSL) with flat rate (recommended) or volume rate and a router that connects your phone to the Internet. You can find a list of recommended routers on the Internet at:

www.gigaset.com/service

From here, go to the FAQ page and select your Gigaset IP telephone. Search for "Router", for example.

- 1 Insert a plug from the Ethernet cable supplied (Cat 5 with 2 RJ45 Western modular plugs) into the LAN connection socket at the side of the base.
- 2 Then insert the second Ethernet cable plug into a LAN socket on the router.

As soon as the cable connecting the phone and router is plugged in and the router is switched on, the key lights up on the front of the base (paging key).

You are now able to establish VoIP connections within Gigaset.net (→ [page 57](#)).

Setting up the phone – installation wizard

Auto configuration:

The configuration process for VoIP connections is automated for some VoIP providers. The provider creates a configuration file with all required VoIP access data (the general VoIP provider data and your personal account data). This file is placed on a configuration server on the Internet for downloading to your phone.

Your provider gives you a configuration code.

The installation wizard on your phone (→ [page 23](#)) prompts you to enter the code at the relevant point. All the required VoIP data is then downloaded automatically onto your phone.

The configuration file is only transferred via a secure connection (TLS authentication). If the TLS authentication fails, the message key  flashes. Press the message key to display the **Certificate error - Please check your certificates in the Web configurator.** message. Press the right display key to confirm the message.

Log in to the Web configurator (→ [page 179](#)).

The **Security** (→ [page 190](#)) Web page tells you why the secure connection could not be established and what you can do.

If the configuration file fails to download (e.g., because the configuration server is not available), the phone keeps trying to establish a connection until the file is downloaded successfully to the phone.

If no VoIP connections have been generated on the phone yet, you can start the installation wizard. The wizard allows you to make all necessary settings for your phone.

Two individual wizards are combined to form the installation wizard.

- 1 IP wizard
- 2 Connection wizard

Starting the installation wizard

As soon as the handset battery is sufficiently charged, the message key  on the handset will flash (approx. 20 minutes after you have put the handset in the charger).

- ▶ Press the message key .

1. IP wizard: making VoIP settings

You will see the following display:

Before you can use the Internet (VoIP) to phone any other numbers on the Internet, the fixed line or the mobile network, you need the services of a VoIP provider who supports the VoIP SIP standard.

Prerequisite: you have registered with a VoIP provider (e.g., via your PC) and set up at least one VoIP account (IP account).

To use VoIP, you now need to enter the access data for your VoIP account. You will receive all the necessary data from your VoIP provider. This will include:

Either:

- ◆ Your user name (if required by the VoIP provider).
This is the user name of your IP account (caller ID), frequently identical to your phone number.
- ◆ Your authentication name or login ID
- ◆ The (login) password registered with the VoIP provider
- ◆ General settings for your VoIP provider (server addresses etc.)

Or:

- ◆ An auto configuration code (activation code)

Your Gigaset phone's IP wizard can help you make these entries.

Please note

You can configure up to six VoIP connections. When you get started with the phone, you can initially only configure one VoIP connection. You can configure additional VoIP connections later with the IP wizard (→ [page 165](#)) or Web configurator.

Starting the IP wizard

Prerequisite: the phone is connected to the router. Your router is connected to the Internet (→ [page 21](#)).

- ▶ Press on the centre of the control key  or on the right display key **Yes** to start the IP wizard.

Information about the IP wizard appears in the display.

- ▶ Press the bottom of the control key  to scroll down.

- ▶ Press the **OK** display key to continue.

A list of all possible IP connections is shown in the display (IP 1 to IP 6). VoIP connections that are already configured are marked with .

- ▶ If necessary, press down on the control key  to select a connection.
- ▶ Press the **OK** display key to continue.

You will see the following display:

Your VoIP provider has supplied you with an **authentication name/password** and, where applicable, a user name:

- ▶ Press the key below **No** on the display screen.
- ▶ For further information, please see "**Downloading VoIP provider data**" → **page 29**.

You have received an **auto configuration code** (activation code) from your VoIP provider:

- ▶ Press the key below **Yes** on the display screen.
- ▶ For further information, please see "**Entering the auto configuration code**" → **page 28**.

No Internet connection:

The phone requires an Internet connection for you to register your telephone with a VoIP provider. If a connection cannot be made, one of the following messages is displayed:

- ◆ If the phone cannot establish a connection to the router, the message **IP address not available** is displayed.

Check the plug connection between the router and the base and check the settings on the router.

Your phone is preconfigured for dynamic assignment of the IP address. In order for your router to "recognise" the phone, dynamic IP address assignment must also be activated on the router i.e., the router's DHCP server must be activated.

If the DHCP server cannot or should not be activated, you must assign a fixed IP address to the phone (→ [page 163](#)).

- ◆ If the phone cannot establish a connection to the Internet, the message **Internet connection not available** is displayed.

The IP server may be temporarily unavailable. In this case, try to make a connection again later.

Otherwise: check the plug connection between the router and the modem or DSL connection and check the settings on the router.

- ▶ Press **OK**; the IP wizard is closed.

You will then need to call up the wizard later via the menu to configure the IP connection.

Entering the auto configuration code

- ▶ Using the keypad, enter the auto configuration code you received from the provider (max. 32 characters).
- ▶ Press the key below **OK** on the display screen.

All data required for VoIP telephony is loaded directly from the Internet to your phone.

When all the data has been successfully loaded onto your phone, **Your IP account is registered with your provider.** appears on the display.

- ▶ For further information, please see "**2. Connection wizard**", **page 33**.

Downloading VoIP provider data

The connection wizard establishes a connection with the Gigaset configuration server on the Internet. Various profiles with general access data for different VoIP providers can be downloaded here.

After a brief period you will see the following display:

A list of countries is loaded.

- ▶ Press up or down on the control key  repeatedly until the country in which you want to use the phone is selected in the display.

- ▶ Press the key below **OK** on the display screen to confirm your selection.

A list of the VoIP providers for which a profile with the general access data is available on the configuration server is displayed.

- ▶ Press up or down on the control key  repeatedly until your VoIP provider is selected in the display.

- ▶ Press the key below **OK** on the display screen to confirm your selection.

The general access data for your VoIP provider will be downloaded and saved on the phone.

You have not been able to download your provider's data

If your VoIP provider does not appear in the list, i.e., its general data is not provided for download, you must cancel the IP wizard:

- ▶ **Briefly** press the end call key  repeatedly until **End wizard?** appears in the display and then press the display key **Yes**.

You can perform the subsequent steps of the installation wizard.

You must then make the required VoIP provider and IP account settings using the Web configurator. You receive the general provider data from your VoIP provider.

You can change the assignment of the VoIP connection as send/receive connection at a later time via the telephone menu or the Web configurator.

Entering user data for your VoIP account

You are now prompted to enter your personal access data for your VoIP account.

The following are provider-dependent:

◆ User ID, Password, User name

Please note ...

... when entering access data, it is case sensitive.

To switch between upper and lower case and digits, press the **[↔#]** key (several times if necessary). You can see briefly in the display whether upper case, lower case or digit input is selected.

Characters entered incorrectly can be deleted using the left display key below **<C**. The character to the left of the cursor is deleted.

You can navigate within the input field using the control key **[↔]** (left/right).

► Using the keypad, enter the authentication name that you received from your VoIP provider.

► Press the key under **OK** on the display screen.

► Use the keypad to enter your password.

► Press the key under **OK** on the display screen.

► Using the keypad, enter the user name that you received from your VoIP provider.

► Press the key under **OK** on the display screen.

Once you have made all the necessary entries, the IP wizard will try to register the phone with the VoIP provider.

After successful registration, the message "**Your IP account is registered with your provider.**" appears in the display.

The connection wizard starts.

2. Connection wizard

The connection wizard enables you to assign previously configured connections (fixed line connection, Gigaset.net and VoIP connections, → [page 57](#) and → [page 24](#)) to internal parties as receive and, if applicable, as send connections. Internal parties are the registered handsets and (for Gigaset C610A IP) the base answering machine.

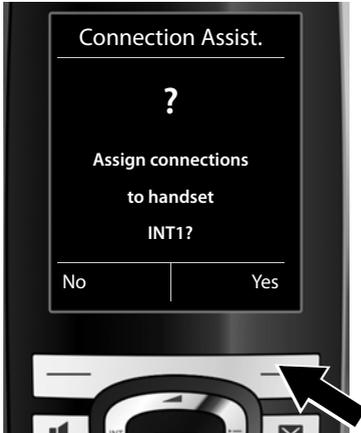

- ◆ **Receive connections** are the phone numbers (connections) on which you can be called. Incoming calls are only forwarded to the internal parties (end devices) for which the relevant connection is assigned as receive connection.
- ◆ **Send connections** are the numbers that are sent to the called party. The network provider calculates charges based on the send connections. You can assign each internal party a number or the associated connection as a send connection.
- ◆ Each connection (number) of your phone can be both a send as well as a receive connection. You can assign each connection to several internal parties as send and/or receive connection. It may only be assigned to one answering machine as a receive connection.

Default assignment

All configured connections are assigned as receive connections to the handsets and the local answering machine 1 for the Gigaset C610A IP at registration/start-up. The fixed line connection is assigned to the handsets as a send connection.

Starting the connection assistant

a.

- ▶ Press the display key **Yes** if you wish to change the setting for the send and receive connections of the **handset** with the internal name **INT1**.
- ▶ Press the display key **No** if you do not wish to change the setting for this handset.

b.

The list of receive connections currently assigned is displayed. Press down on the control key  to scroll through the list if necessary.

- ▶ Press the display key **Change** if you wish to change the receive connection setting.
- ▶ Press the display key **OK** if you do not wish to change the setting.

Press **OK** to skip the following steps. Continue from → **e**.

Press **Change** to display the following:

c.

If no calls to the VoIP connection IP1 are to be signalled on the handset:

- ▶ Press **right** on the control key  to set to **No**.

d.

- ▶ Press **down** on the control key  to switch to the next connection. Select either **Yes** or **No** as described above.
- ▶ Repeat the steps for each connection.
- ▶ Press the display key **Save** once you have finished configuring the settings for the handset.

The updated list of receive connections is displayed one more time for you to check.

Press the display key **OK** to confirm the assignment.

First steps

e.

The send connection currently set for the handset is displayed: **Fixed Line**.

- ▶ Press the display key **OK** if you do not wish to change the setting. Skip the following step.
- ▶ To change the setting, press the display key **Change**.

f.

If the handset is to make calls via a different connection/phone number:

- ▶ Press **right** on the control key  repeatedly, until the required connection is displayed (in the example, **IP1**).

- ▶ Press the display key **Save** to save the settings.

Instead of a connection, you can also select **Sel. at each call**. Each time you make a call, you can then select the connection you wish to use on this handset.

If other handsets are already registered to the base, you are requested to assign send and receive connections for the handsets. The following is shown in the display:

Assign connections to handset ?

- ▶ Perform steps **a.** to **f.** for each registered handset.

On the Gigaset C610A IP:

Once you have assigned send and receive connections to all handsets, you are prompted to assign the receive connections for the three answering machines on the base.

"Assign connections to answering machine ?" is shown in the display.

- ▶ Perform steps **a.** to **d.** for each answering machine.

Please note: each connection may only be assigned to one of the three local answering machines as a receive connection. If you assign a receive connection to an answering machine and this connection is already assigned to another answering machine, the "old" assignment is deleted.

After successfully configuring the settings, you will briefly see the following display:

Completing the installation

The handset then returns to idle status (an example of the display in idle status):

Displays

◆ Reception between the base and the handset:

- Good to poor:    
- No reception:  (red)

Green: Eco Mode activated

◆ Battery charge status:

-  white: charged over 66%
-  white: charged between 34% and 66%
-  white: charged between 11% and 33%
-  red: charged below 11%
-  flashes red: battery almost empty (less than 10-minutes talktime)
-     white: battery charging

◆ INT 1

Internal name of the handset

Please note

If you have chosen a colour scheme with a white background, the white symbols are displayed in black.

Gigaset C610A IP: the answering machines of the base to which you assigned a receive connection are activated and switched on in answer and record mode with a standard announcement (→ [page 121](#)). This is shown by the **AM 1+2 on** message on the display, for example.

Please note

To protect your phone and its system settings from unauthorised access, please define a 4-digit number code (system PIN) known only to yourself. This code must be entered before you can register/de-register handsets or alter your phone's VoIP or LAN settings.

The default system PIN is 0000 (4 x zero).

For instructions on changing the PIN, → [page 162](#).

Date/time

There are two methods of setting the date and time:

- ◆ By default, your phone is configured so that the date and time are transferred from a time server on the Internet, provided it is connected to the Internet. You can activate/deactivate the synchronisation with a time server via the Web configurator (→ [page 196](#)).
- ◆ You can also set the date and time manually via the menu of one of the registered handsets (→ [page 161](#)).

To ensure you have the correct time for incoming calls and to use the alarm clock, the date and time must be set.

Connecting the headset to the handset (optional)

You can connect a headset with 2.5 mm jack connectors. See the relevant product page for information on recommended headsets www.gigaset.com.

Attaching the belt clip (optional)

The handset has notches on each side to attach the belt clip.

- ▶ **To attach** – press the belt clip onto the back of the handset so that the protrusions on the belt clip engage with the notches.
- ▶ **To remove** – press the centre of the belt clip firmly with your right thumb, push the fingernail of your left index finger up between the clip and the housing and pull the clip in an upward direction.

Proceeding

Now you have successfully set up your phone, you will certainly want to adapt it to your personal requirements. Use the following guide to quickly locate the most important subjects.

If you are unfamiliar with menu-driven devices such as other Gigaset telephones, read the section entitled "**Using the phone**" → **page 41** first.

Information on is located here.
Making external calls and accepting calls	▶ page 51
Setting the ringtone melody and volume	▶ page 156
Storing your own area code in the telephone	▶ page 162
Setting Eco Mode	▶ page 136
Preparing the telephone for SMS reception	▶ page 94
Setting the answering machine (Gigaset C610A IP)	▶ page 121
Operating the telephone on a PABX	▶ page 173
Registering available Gigaset handsets to the base and transferring their directory entries to the new handset	▶ page 143 page 77
Using online directories	▶ page 81
Entering additional VoIP accounts	▶ page 165
Configuring the phone via the Web configurator	▶ page 176

If you have any questions about using your phone, please read the tips on troubleshooting (→ **page 203**) or contact our Customer Care team (→ **page 203**).

Using the phone

Control key

Below, the side of the control key that you must press in the respective operating situation is marked in black (top, bottom, right, left, centre) e.g.,  for "press right on the control key" or  for "press the centre of the control key".

The control key has a number of different functions:

When the handset is in idle status

-  Press **briefly** to open the handset directory.
Press and **hold** to open the list of available online directories.
-  Open the main menu.
-  Open the list of handsets.
-  Call up the menu for setting the handset's call volume ([page 156](#)).

In the main menu

- , ,  or 
- Navigate to the required function.

In submenus and lists

- / Scroll up/down line by line.

In input fields

Use the control key to move the cursor up , down , right  or left .
Press and **hold**  or  to move the cursor **word by word**.

During an external call

-  Open the directory.
-  Initiate an internal consultation call.
-  Adjust the loudspeaker volume for earpiece and speaker mode.

Functions when pressing the middle of the control key

Depending on the operating situation, the key has different functions.

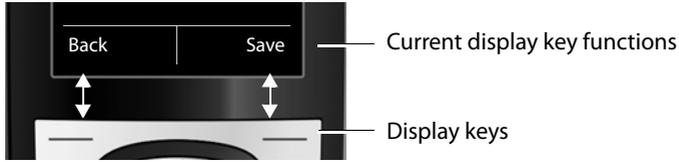

- ◆ **In idle status** the key opens the main menu.
- ◆ **In submenus, selection and input fields**, the key takes on the function of the display keys **OK**, **Yes**, **Save**, **Select** or **Change**.

Please note

These instructions demonstrate opening the main menu by pressing the right of the control key  and confirming the functions by pressing the appropriate display key. However, if you prefer, you can use the control key as described above.

Display keys

The functions of the display keys change depending on the particular operating situation. Example:

Some important display keys:

- Options** Open a menu for further functions.
- OK** Confirm selection.
- < C** Delete key: delete character by character/word by word from right to left.
- Back** Go back one menu level or cancel operation.
- Save** Save entry.
- Open the redial list.
- 00** Gigaset C610A IP: forward a call to an answering machine.

Keys on the keypad

 /  /  etc.
Press the matching key on the handset.

Enter digits or letters.

Correcting incorrect entries

You can correct incorrect characters in the input fields by navigating to the incorrect entry using the control key. You can then:

- ◆ Delete the **character** to the left of the cursor with the display key **< C** (**press and hold** to delete the **word**)
- ◆ Insert characters at the cursor position
- ◆ Overwrite the highlighted (flashing) character e.g., when entering time and date.

Menu guidance

You can access your telephone's functions by using a menu that has a number of levels.

The menu view can be extended (**expert mode** ) or restricted (**standard mode**). Expert mode is the active default setting.

Settings or functions that are only available in expert mode are marked in these instructions with the  icon.

Switching between standard mode/expert mode and the menu overview
→ [page 47](#).

Main menu (first menu level)

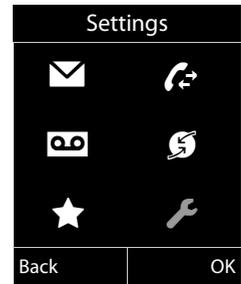

- ▶ When the handset is in idle status, press the **right** control key  to open the main menu.

The main menu functions are shown in the display as icons. The icon for the selected function is highlighted in orange and the name of the associated function appears in the display header.

To access a function i.e., to open the corresponding sub-menu (next menu level):

- ▶ Use the control key  to select the required function and press the display key **OK**.

Briefly press the display key **Back** or the end call key  to revert back to idle status.

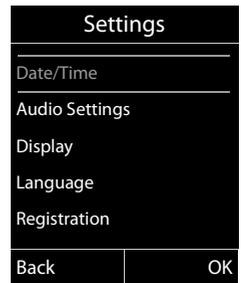

Submenus

The functions in the submenus are displayed as lists (example on the right).

To access a function:

- ▶ Scroll to the function with the control key  and press **OK**.

Briefly press the display key **Back** or the end call key  to return to the previous menu level/cancel the operation.

Reverting to idle status

You can revert to idle status from anywhere in the menu as follows:

- ▶ Press and **hold** the end call key .

Or:

- ▶ Do not press any key: After 2 minutes the display will **automatically** revert to idle status.

Settings that have not been saved by selecting the display keys **OK**, **Yes**, **Save** or **Change** are lost.

An example of the display in idle status is shown on [page 38](#).

Activating/deactivating the handset

With the phone in idle status, press and **hold** the end call key (confirmation tone) to deactivate the handset.
Press and **hold** the end call key again to reactivate the handset.

Please note

When the handset is activated, an animation showing the **Gigaset** logo is displayed for several seconds.

Activating/deactivating the keypad lock

The keypad lock prevents any unwanted use of the phone.

Press and **hold** the hash key in idle status to activate or deactivate the keypad lock. You will hear the confirmation tone.

If the keypad lock is activated, you will see a message when you press a key.

The keypad lock deactivates automatically when you receive a call. It is reactivated when the call is finished.

Please note

When the keypad lock is active, you cannot call emergency numbers.

Understanding the operating steps in the user guide

The operating steps are shown in abbreviated form.

Example:

The display:

 →  → Eco Mode → Eco Mode+ (☑ = on)

means:

- ▶ Press **right** on the control key  to open the main menu.

- ▶ Press right, left, down and up on the control key  to navigate to the **Settings** submenu.

- ▶ Press down on the control key  until the **Eco Mode** menu option is highlighted.

- ▶ Press the display key **OK** to confirm your selection.

Using the phone

- ▶ Press down on the control key  until the **Eco Mode+** menu option is highlighted.

- ▶ Press the display key **Change** to activate/deactivate the function.

The change is effective immediately and does not need to be confirmed.

- ▶ Press the key below **Back** to skip back to the previous menu level.

Or

- Press and **hold** the end call key  to return to idle status.

Menu tree

Setting standard or expert mode

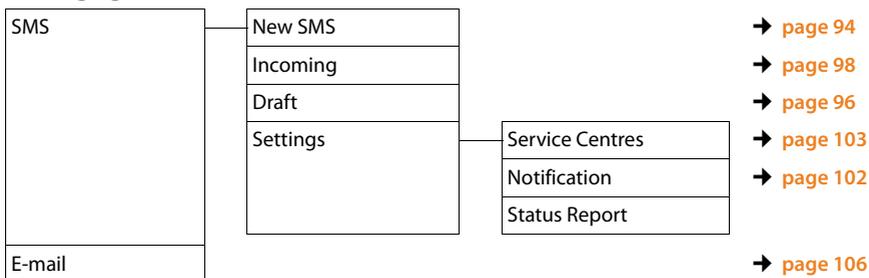

The menu view can be extended (**expert mode** ) or restricted (**standard mode**). Menu options that are only available in expert mode are marked with the  icon.

To change these settings:

Select  →  → **Menu View** → **Simplified** (standard mode) or **Complete** (expert mode) → **Select** (the active mode is marked with )

To open the main menu: press  when the handset is in **idle status**.

✉ Messaging

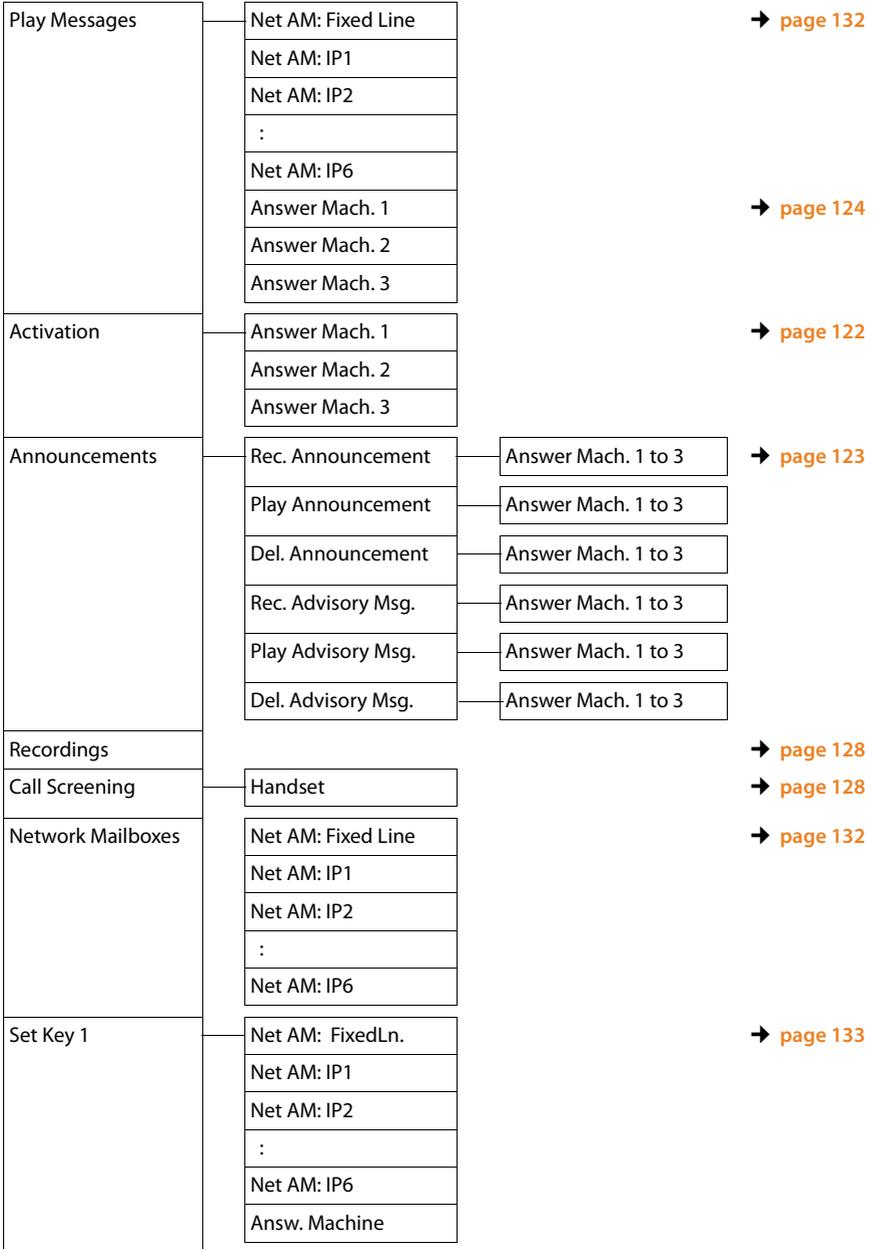

Call Lists

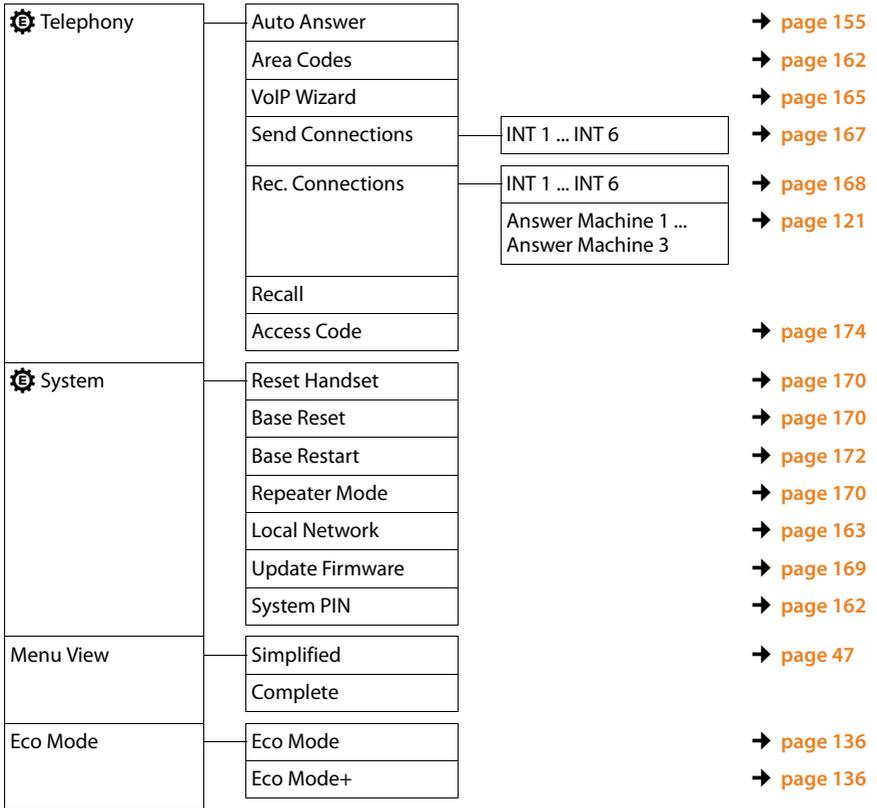

Menu tree

Voice Mail

Menu tree

Making calls

If the display backlight is deactivated (→ [page 155](#)), it can be reactivated by pressing any key.

Please note

You can make up to two external calls at the same time via your base, depending on the quality of your DSL connection.

Making an external call

External calls are calls made via the public telephone network (fixed line, mobile phone network) or via the Internet (VoIP).

To make an external call, you need to define one of the phone connections as a send connection. You have the following options:

- ◆ Assign a connection to the handset as a send connection permanently (→ [page 167](#)).
You can use a "fallback" via a display key (→ [page 150](#)).
- ◆ Select a send connection on the handset each time you make a call.

Permanently assigned send connection

Prerequisite:

A specific connection (fixed line or VoIP connection) is assigned to the handset as a send connection (→ [page 167](#)).

Enter the number and press the talk key. The number is dialed.

Or:

Press and **hold**. A list of your phone's connections will be displayed.

Select a connection.

Press the display key or the middle of the control key.

Enter the number. The number is dialed approximately 3.5 seconds after the last digit is entered.

Instead of the talk key , you can also press the speaker key  to make a call in speaker mode.

In this user guide, each of these variants is indicated by "Press the talk key ".

The dialed number and the send connection used are shown in the display (e.g., **via IP2**). The connection name you have assigned is displayed where available. Otherwise, the standard name is used.

Please note

- ◆ If a dialling plan has been defined for the dialled phone number (→ [page 192](#)), then the connection specified in the dialling plan will be used to establish the connection instead of the send connection. If the phone number is blocked by a dialling plan, it will not be dialled. **Not possible** is displayed.
- ◆ If you use VoIP to make a call to a fixed line, you may also have to dial the area code for local calls (depending on the provider). You can avoid having to dial your own area code by entering it in the configuration and activating the **Predial area code for local calls via VoIP** option (see Web configurator).
- ◆ You have activated the **Automatic Fallback to Fixed Line** option with the Web configurator. If an attempt to make a call via a VoIP connection fails, the phone automatically attempts to establish the connection via the fixed line.
- ◆ Gigaset.net numbers ending with the suffix #9 are automatically dialled via the Gigaset.net connection. The calls are free of charge (→ [page 57](#)).

Selecting a connection at each call

Prerequisite: "Sel. at each call" has been assigned to the handset instead of a send connection (→ [page 167](#)).

Enter the number and press the talk key. The list of all the phone's connections is displayed.

Select a connection.

Press the display key or the middle of the control key.

If a dialling plan has been defined for the dialled phone number (→ [page 192](#)), then the send connection specified in the dialling plan is used.

Please note

- ◆ You can cancel the dialling process with the end call key .
- ◆ You are shown the duration of the call while the call is in progress.
- ◆ Dialling with the directory ([page 73](#)) or call and redial list ([page 68](#)) saves you from repeatedly keying in phone numbers.
- ◆ If you have multiple handsets registered to the base, you can make **internal** calls free of charge ([page 146](#)).

Using an alternative connection/connection list on the display key

Prerequisite: you have assigned an "alternative connection" or the list with all configured connections to a display key (→ [page 150](#)).

Press the display key.

Select a connection.

Press the talk key or display key.

Enter a number. The number is dialled approximately 3.5 seconds after the last digit is entered.

Any dialling plan (→ [page 192](#)) that has been defined for the dialled phone number is ignored. The selected send connection is always used.

Calling an IP address (provider-dependent)

You can also dial an IP address instead of a phone number using VoIP.

- ▶ Press the star key  to separate the sections of the IP address (e.g., 149*246*122*28).
- ▶ If necessary, press the hash  key to attach the SIP port number of the person you are calling to the IP address (e.g., 149*246*122*28#5060).

If your VoIP provider does not support the dialling of IP addresses, each part of the address will be interpreted as a normal phone number.

Dialling emergency numbers

If no dialling plans for emergency numbers are preset on your telephone, you should set dialling plans yourself. Assign them to a connection that you know supports emergency numbers. Calls to emergency numbers are always supported by fixed lines.

Please note: if no dialling plans are defined for emergency numbers and you have programmed an automatic local area code, the code will also be prefixed to emergency numbers as soon as they are dialled via a VoIP connection.

Displaying the phone number you are calling (COLP)

Prerequisites:

- ◆ Your network provider supports COLP (**C**onnected **L**ine **I**dentification **P**resentation). You may need to activate COLP with the provider (ask your provider about this).
- ◆ The called party has not activated COLR (**C**onnected **L**ine **I**dentification **R**estriction).

For outgoing calls, the phone number of the connection on which the call is received is displayed on the handset.

The displayed number may differ from the number you have dialled. Examples:

- ◆ The called party has activated call divert.
- ◆ The call is answered by another connection within a PABX system.

If there is an entry in the directory for this phone number, the corresponding name will be displayed.

Please note

- ◆ The actual number of the connection you have reached (or the assigned name) is displayed instead of the called number during call swapping, conference calls and consultation calls.
- ◆ When the phone number is copied to the directory and the redial list, the dialled number (not the displayed number) is copied.

Ending a call

Press the end call key.

Accepting a call

An incoming call is indicated in three ways: By ringing, by a display on the screen and by the flashing speaker key .

Please note

Only calls to the receive connections assigned to the handset are signalled (→ [page 168](#)).

The following applies in particular if VoIP connections are configured on your base:

- ◆ If you have not assigned the receive connections on your phone, all incoming calls are signalled on all registered handsets.
- ◆ If you have assigned connections but not assigned a connection to any handset or answering machine as the receive connection, calls on this connection will not be signalled.
Gigaset C610A IP: if the number is only assigned to an answering machine, calls will not be signalled. If the answering machine is switched on, it will accept the call.
- ◆ If a call cannot be assigned to any connection on the phone, this call is signalled on all handsets.

Accept the call by:

- ▶ Pressing the talk key .
- ▶ Pressing the speaker key .
- ▶ Gigaset C610A IP: if the receive connection is assigned to an answering machine and that answering machine is not busy with another call:
 - For calls to one of your VoIP connections:
Select **Options** → **Divert to AM** to forward the call to the answering machine (→ [page 127](#)).
 - For calls to your fixed line connection:
Press the display key  to forward the call to the answering machine.

To deactivate the ringtone, press the **Silence** display key. You can accept the call as long as it is displayed on the screen.

If you press the end call key , a call to a VoIP connection is rejected. For a call to the fixed line connection, only the ringtone is deactivated as with **Silence**.

Calling Line Identification

When you receive a call, the caller's number is displayed on the screen if the following prerequisites are met:

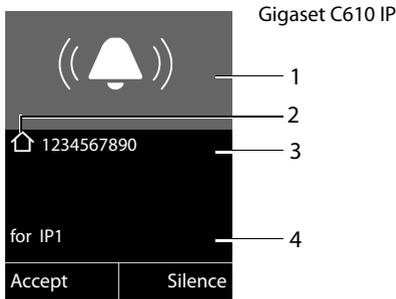

- ◆ Your network provider supports CLIP, CLI.
 - CLI (Calling Line Identification): the caller's number is transmitted.
 - CLIP (Calling Line Identification Presentation): the caller's number is displayed.
- ◆ You have requested CLIP from your network provider.
- ◆ The caller has arranged CLI with the network provider.

Call display

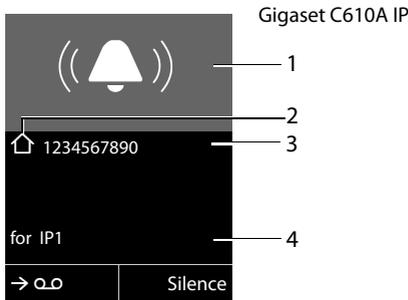

If the caller's number is saved in your directory, the number is replaced with the corresponding directory entry  /  /  symbol and name/number).

You can use the display to decide which receive connection the call is directed to.

Example of display

Or

1 Ringtone icon (background colour changes if VIP group is assigned → [page 74](#))

2 Where applicable,  /  /  symbol from the directory

3 Number or name of caller

4 Receive connection: Indicates which of your phone numbers the caller has dialled. The name you set when configuring the phone or the default name is displayed (**Fixed Line** or **IP1 to IP6**). For calls from Gigaset.net, **for Gigaset.net** is displayed.

The following is displayed instead of the number:

- ◆ **External**, if no number is transmitted.
- ◆ **Withheld**, if the caller has withheld Calling Line Identification (page 60).
- ◆ **Unavailable**, if the caller has not arranged Calling Line Identification.

Notes on calling line display (CLIP)

By default, the number of the caller is shown in the display of your Gigaset telephone. You do not have to make any other settings on your Gigaset telephone.

However, if the caller's number is not displayed, this can be due to the following:

- ◆ You have not requested CLIP from your provider
- ◆ Your telephone is connected via a PABX or a router with an integrated PABX (gateway) that does not transmit all information.

Is your telephone connected via a PABX/gateway?

You can establish this by checking for an additional device connected between your telephone and home connection e.g., a PABX, gateway etc. In most cases, simply resetting this device will remedy the situation:

- ▶ Briefly disconnect the PABX power plug. Re-insert the plug and wait for the device to restart.

If the caller number is still not displayed:

- ▶ Check the CLIP settings of your PABX and activate this function if necessary. In the user guide for the device, search for the term "CLIP" (or an alternative term such as "calling line identification", "phone number transmission", "caller ID" etc.). If necessary, contact the device manufacturer.

If this does not resolve the problem, it is possible that your network provider does not provide the CLIP service for this number.

Have you ordered the calling line display service from your network provider?

- ▶ Check whether your provider supports calling line display (CLIP) and that the function has been activated for you. If necessary, contact your provider.

Additional information on this subject can be found on the Gigaset homepage at: www.gigaset.com/service

VoIP telephony via Gigaset.net

You can use **Gigaset.net** to make free phone calls via the Internet **directly** to other Gigaset.net users without having to set up an account with a VoIP provider or make any further settings. You simply have to connect your phone to the power supply and the Internet connection and, if necessary, enter yourself in the Gigaset.net online directory under a name of your choice (→ [page 90](#)).

Gigaset.net is a VoIP service provided by Gigaset Communications GmbH to which all users of a Gigaset VoIP device can subscribe.

You can call other subscribers to Gigaset.net **free of charge** i.e., there are no telephone charges other than the costs for your Internet connection. Connections to/from other networks are not possible.

Numbers ending with the suffix #9 are automatically dialled via the Gigaset.net connection.

Please note

Gigaset.net supports broadband telephony: Gigaset.net calls that you make from your phone with a different broadband-capable terminal have excellent sound quality.

Every Gigaset VoIP device is assigned a Gigaset.net phone number by default (→ [page 211](#)).

All registered subscribers are included in the Gigaset.net directory, which you are able to access.

An echo service is available for you to check your VoIP connection.

The echo service is available in six languages:

- ◆ 12341#9 (English)
- ◆ 12342#9 (Dutch)
- ◆ 12343#9 (Italian)
- ◆ 12344#9 (French)
- ◆ 12345#9 (German)
- ◆ 12346#9 (Spanish)

After an announcement, the echo service immediately sends back the voice data you have received in the form of an echo.

Exclusion of liability

Gigaset.net is a voluntary service provided by Gigaset Communications GmbH with no liability or guarantee for the availability of the network and the service..

Please note

If you do not use your Gigaset.net connection for six months, it is automatically disabled. You cannot be reached for calls from Gigaset.net.

The connection is reactivated as soon as you:

- ◆ Start a search in the Gigaset.net directory
- ◆ Make a call via Gigaset.net (dial a number with #9 at the end)
- ◆ Activate the connection via the Web configurator

Gigaset HDSP – telephony with brilliant sound quality

Your Gigaset telephone supports the broadband codec G.722. You can therefore use it to make calls with brilliant sound quality (High Definition Sound Performance).

If you register broadband-capable handsets with your base, internal calls between these handsets will also be made via broadband.

The following are prerequisites for broadband connections on your telephone:

◆ **For internal calls:**

The handsets involved are broadband-capable, i.e., they support codec G.722.

◆ **For external calls via VoIP:**

- You make the call from a broadband-capable handset.
- You have selected codec G.722 for outgoing calls.
- Your VoIP provider supports broadband connections.
- The recipient's phone supports codec G.722 and accepts the establishment of a broadband connection.

Please note

The VoIP service **Gigaset.net** (→ [page 57](#)) supports broadband connections.

Activating/deactivating speaker mode

In speaker mode, instead of holding the handset to your ear you can put it down, for example on the table in front of you. For example, this allows others to participate in the call.

Activating speaker mode while dialling

Enter the number and press the speaker key.

Switching between earpiece and speaker mode

Press the speaker key.

During a call and when listening to the answering machine (on the Gigaset C610A IP), activate or deactivate speaker mode.

If you wish to place the handset in the charger during a call:

▶ Press and hold the speaker key  while placing the handset in the base.

For instructions on adjusting the speaker volume, → [page 156](#).

Muting the handset

You can deactivate the handset's microphone during an external call (including during a conference or when call swapping). The other parties cannot hear you, but you can still hear them.

Prerequisite: you are conducting an external call.

Deactivating the microphone

Press the mute key. The display shows **Microphone is off**.

Unmuting the microphone

Press the mute key again to unmute the microphone.

If a second call (call waiting) is received in mute mode, this is signalled acoustically as usual. However, it is only shown on the display once the microphone has been unmuted.

Please note

In mute mode, all keys on the handset are deactivated with the exception of the:

- ◆ Mute key 
- ◆ End call key , that you can use to end the call.

Making calls using network services

Network services are functions that your network provider makes available to you.

Please note:

- ◆ Some settings cannot be made simultaneously on multiple handsets. If this is the case, you will hear a negative acknowledge tone.
- ◆ Some network services may only be used if you have requested them from your fixed line provider (there may be an extra charge).
- ▶ **If you require assistance, please contact your network provider.**

Configuring general settings for all calls

Anonymous calling – withholding number

You can make anonymous calls (CLIR = Calling Line Identification Restriction). Your phone number will not be displayed when you make outgoing calls. You are calling anonymously.

Prerequisites:

- ◆ For anonymous calls via your fixed line connection, you need to have requested the relevant service (feature) from your network provider.
- ◆ Anonymous calls are only possible via VoIP connections through providers that support the "anonymous calling" function. You may have to ask your VoIP provider to activate this function.

Activating/deactivating "anonymous calling" for all calls

Withholding caller ID can be permanently activated/deactivated for all your phone's connections.

When this function is activated, the phone number is withheld for all fixed line calls and for all calls via VoIP connections. Withholding caller ID is activated for all registered handsets.

 →  **Select Services**

All Calls Anony.

Select and press **OK** (✓ = on).

For instructions on withholding the number temporarily for a subsequent call see [page 65](#).

General call divert (CD)

A distinction is made between

- ◆ Diverting calls internally and
- ◆ Diverting calls to an external phone number

Call divert to an external connection

With call divert the call is diverted to another external connection. Your call divert settings can be specific to a particular connection i.e., for every connection (fixed line number and VoIP connection) that is assigned to the handset as a receive connection.

Prerequisite: the VoIP provider supports call divert.

 →  **Select Services** → **Call Divert**

A list containing the configured and activated receive connections for your phone and **Internal** is displayed.

- ▶ Select the receive connection for which you want to activate or deactivate call divert, and press **OK**.
- ▶ You can enter data in the following fields:

Status

Activate/deactivate call divert.

Phone Number

Enter the number to which the call is to be diverted. You can specify a different fixed line, VoIP or mobile number for every connection.

You must specify another Gigaset.net number when diverting a call from your Gigaset.net number.

When

Select **All Calls** / **When Busy** / **No Answer**.

All Calls: calls are diverted immediately i.e., no more calls to this connection are signalled on your phone.

No Answer: calls are diverted if no one accepts the call within several rings (VoIP only).

When Busy: calls are diverted when your line is busy (VoIP only).

Send Press the display key.

For diverting calls from the fixed line:

A connection is established to the telephone network to activate/deactivate call divert.

- ▶ After confirmation from the fixed line, press the end call key .

Please note

Diverting calls to your phone numbers can result in **additional costs**. Please consult your provider.

Diverting calls internally

You can divert all **external** calls intended for a receive connection on the handset to a different handset.

 →  **Select Services** → **Call Divert**

Internal Select and press **OK**.

▶ You can enter data in the following fields:

Activation

Activate/deactivate call divert.

To Handset

Select internal party.

No Handset is displayed if internal call divert has not been set previously or if the previously set handset is no longer registered.

Ring Delay

If you prefer to have a delay before the call is diverted, select the length of the delay (**None**, **10 sec.**, **20 sec.** or **30 sec.**). If you select **None**, the call is not signalled on the handset and is diverted immediately.

Save Press the display key.

Internal call divert is only single-stage i.e., if calls for the handset are diverted to a different handset (e.g., MT1) on which a call divert is also active (e.g., to MT2), this second call divert is not activated. The calls are signalled on handset MT1.

Please note

- ◆ Any call for the handset that has been diverted is entered in the call lists.
- ◆ If a call to a receive connection that is only assigned to the handset is diverted to a handset that is not available (e.g., the handset is deactivated), the call is rejected after a short time.

Activating/deactivating call waiting for external calls

If the function is activated, during an **external** call you will hear a call waiting tone to signal that another external caller is trying to get through. If you have CLIP, the number of the waiting caller or the corresponding directory entry is shown in the display. The caller will hear the ringing tone.

When call waiting is deactivated, the caller will hear the busy tone if you are already making a call, you are the only party assigned to this connection and this connection is not assigned to an answering machine.

Activating/deactivating call waiting

Prerequisite for calls via VoIP: parallel VoIP connections are permitted on your telephone (default setting; setting can be changed via the Web configurator).

 →  **Select Services** → **Call Waiting**

Status Select **On** / **Off** to activate/deactivate call waiting.

▶ Press the display key **Save**.

Call waiting is activated/deactivated for all connections to the telephone and all registered handsets.

To activate/deactivate the function for the fixed line connection, the phone establishes a connection to the exchange to send the relevant code.

▶ After confirmation from the fixed line, press the end call key .

Call Waiting

Many Telecommunication providers in Australia and New Zealand offer a Call waiting service on your Home Phone Line. Please speak to your service provider to check if your Home Phone line is activated for this service (charges may apply).

The most common providers instructions for Call waiting are as follows

Please note

These processes depend on the network provider and are subject to change.

Australia:

Telstra:

To answer an incoming call when you're already on a call, or to switch between calls:

◆ Press the recall key and listen for the dial tone, then press .

To hang up on one call and return to the other:

◆ Press the recall key on your phone and listen for the dial tone, then press .

To reject an incoming call when you are already on a call:

◆ Push the recall key on your phone and listen for the dial tone, then press  again.

For more information please contact Telstra.

Making calls using network services

Optus:

You are on the phone and hear the beeps.

To put the first caller on hold and talk to the new caller (the caller on hold will hear nothing):

- ◆ Press the recall key on your phone.

To return to the first caller:

- ◆ Press the recall key and put the new caller on hold. You can alternate between the calls in this way.

Or

- ◆ Hang up the first call. The phone will ring again with the second caller. This means that you will not be able to go back to the first caller.

For more information please contact Optus.

New Zealand:

Telecom NZ:

You are on the phone and hear four beeps.

To talk to the second caller:

- ◆ Press the recall key on your phone.
- ◆ To return to the first caller:

Press the recall key again and you will be able to continue your original conversation.

For more information please contact Telecom NZ.

Special settings for calls via VoIP

Activating/deactivating transfer – ECT (Explicit Call Transfer)

If the **Transfer (ECT)** function is activated, you can connect two external callers on a VoIP connection with each other by pressing the end call key  (→ [page 66](#)).

This assumes that you are making an external call via one of your VoIP connections and start an external consultation call.

You can activate/deactivate this function via your handset.

 →  **Select Services**

Transfer (ECT)

Select and press **OK**  = on).

Please note

You can use the Web configurator to make further settings for the call transfer on a VoIP connection (→ [page 195](#)).

Configuring settings for the next call

Activating "anonymous calling" for the next call (VoIP only)

You can withhold your phone number for the next call (CLIR = Calling Line Identification Restriction). The setting applies to all the phone's connections.

In idle status:

 →  **Select Services** → **Nxt Call Anonymous**
Select and press **OK**.

Enter the number or copy from the directory.

Press the display or talk key. The number is dialed.

Generally, you can withhold your number for all calls, → [page 60](#).

Configuring settings during an external call

Please note

For VoIP telephony, the services described below are only available if parallel IP connections are permitted.

Accepting a waiting call (VoIP only)

You are making an external call and hear the call waiting tone.

Accept Press the display key.

Once you have accepted the waiting call, you can switch between the two callers ("Call swapping (VoIP only)" → [page 66](#)) or speak to both at the same time ("Conference" → [page 67](#)).

Please note

- ◆ Without CLIP, a waiting call is only announced with a signal tone.
- ◆ An internal, waiting call is shown on the display. You can neither accept the internal call nor reject it.
- ◆ For instructions on accepting a waiting external call during an internal call, → [page 148](#).

Rejecting a waiting call (VoIP only)

You can hear the call waiting tone but do not want to speak to the caller.

Reject Press the display key.

The caller hears the busy tone.

Please note

You can also press the end call key  to end the current call, and then press the talk key  again to accept the second call.

Consultation calls (external)

You can call a second external caller. The first call is placed on hold.

During an external call:

Ext. Call Press the display key.
The previous call is placed on hold. The caller hears an announcement or music on hold.

Enter the second participant's telephone number.

The phone number is dialled. You are connected to the second participant.

If the participant does not answer, select the display key **End** to return to the first participant.

The consultation call is established via the same send connection as the first call.

Please note

You can also select the second participant's phone number from the directory (page 78), redial list or a call list (page 69).

Ending a consultation call (VoIP only)

Options → End Active Call

You are reconnected to the first call participant.

If you have established the consultation call via your fixed line connection, you can also end the consultation call by pressing the end call key . The connection is briefly interrupted and you will receive a recall. As soon as the receiver is lifted, you are reconnected to the first call participant.

This only applies to VoIP connections if the call transfer is not activated by ending the call ("ECT" → page 64 and "Transfer Call by On-Hook" → page 195).

Call swapping (VoIP only)

You can speak to two callers one at a time (call swap).

Prerequisite: you are conducting an external call and have called a second participant (consultation call) or have accepted a waiting call.

▶ Use  to swap between the participants.

The caller you are currently speaking to is marked with the  icon.

Ending a currently active call

Options → End Active Call

You are re-connected to the waiting caller.

Conference

You can speak to two participants simultaneously.

Prerequisite: you are conducting an external call and have called a second participant (consultation call) or have accepted a waiting call.

- ▶ Press the display key **Conf.**

You and the other two callers (both marked by the  icon) can hear and speak to each other simultaneously.

Ending a conference call (VoIP only)

- ▶ Press the display key **EndConf.**

You return to "call swap" status. You are reconnected to the caller with whom you started the conference.

Or:

Prerequisite:

- ◆ You are making the conference call via your fixed line connection or
- ◆ For VoIP connections: Transfer Call by On-Hook is not activated ("ECT" → [page 64](#); VoIP: "[Configuring call transfer via VoIP](#)", → [page 195](#)).

Press the end call key to end the call with both participants.

Each of the callers can end their participation in the conference call by pressing the end call key and replacing the handset.

Transferring calls

Transferring a call to an internal party

You are making an **external** call and would like to transfer it to another handset.

- ▶ Set up an **internal** consultation call (→ [page 147](#)).

Press the end call key (even before the other party has answered) to transfer the call.

Transferring a call to an external number – ECT (Explicit Call Transfer)

You are making an **external** call via a VoIP connection and wish to transfer the call to another external party.

Prerequisite: the feature is supported by the relevant network provider.

If you have activated the **Transfer Call by On-Hook** function for VoIP using the Web configurator ([Configuring call transfer via VoIP](#), → [page 195](#)).

Press the end call key (even before the other party has answered) to transfer the call.

Please note

This equipment may not provide for the effective handover of a call to another device connected to the same line.

Using lists

The options are:

- ◆ Redial list
- ◆ Incoming message list
- ◆ E-mail list
- ◆ Call lists
- ◆ Answering machine list (Gigaset 610A IP only)

Redial list

The redial list contains the 20 numbers last dialled (max. 32 digits). If one of the numbers is in the directory, the corresponding name will be displayed.

Manual redial

Press the talk key **briefly** to open the redial list.

Select entry.

Press the talk key again. The number is dialled.

When a name is displayed, you can display the corresponding phone number:

- ▶ Press the display key **View** or the middle of the control key.
- ▶ Press right or left on the control key as required to view the next/previous number.

Open the redial list. Once you have assigned a line (e.g., to establish an external consultation call); you must then press the display key **OK** to dial the selected number.

Managing entries in the redial list

In idle status:

Press the talk key **briefly**.

Select entry.

Open menu.

You can select the following functions with :

Copy to Directory

Copy an entry to the directory ([page 73](#)).

Display Number

(As in the directory, [page 76](#))

Delete Entry

Delete selected entry.

(As in the directory, [page 76](#))

Delete List

Delete complete list.

(As in the directory, [page 77](#))

Incoming message list

All received SMS messages are saved in the incoming message list (→ [page 98](#)).

Answering machine list (Gigaset C610A IP only)

You can use the **answering machine list** to listen to the messages that are on the answering machine (→ [page 124](#)).

Call lists

Prerequisite: Calling Line Identification Presentation (CLIP, → [page 55](#))

Your base saves a range of call types:

- ◆ Accepted calls (from the user or the answering machine)
- ◆ Outgoing calls
- ◆ Missed calls

You can view each type of call separately or gain an overview of all calls. The list of accepted and missed calls contains the last 30 entries for each. The list of outgoing calls contains the last 60 entries.

In idle status, open the call lists by selecting the **Calls** (→ [page 152](#)) display key or via the menu:

 →  → All Calls / Outgoing Calls / Accepted Calls / Missed Calls

Please note

You can receive information on unknown numbers free of charge via the reverse search in the online directory (→ [page 81](#)).

List entry

New messages are displayed at the top.

Example of list entries:

All Calls	
  Frank	
for IP2	
14.02.11, 15:40	
 089563795	
for IP1	
13.02.11, 15:32	
View	Options

The following is displayed:

- ◆ List type (in header)
- ◆ The entry status (only in the list of missed calls)

Bold: new entry

Using lists

- ◆ The caller's number or the name saved for this number in the local or online directory. Where applicable, the  /  /  symbol from the directory.
- ◆ Name of the connection to which the missed/accepted call was directed (**for** receive connection), or via which the outgoing call was dialled (**via** send connection). The connection name you have assigned is displayed where available. Otherwise, the standard name is used.
- ◆ Date and time of call (if set).
- ◆ Type of entry:
 - Accepted calls ()
 - Missed calls ()
 - Outgoing calls ()
 - Calls recorded by the answering machine ()
- ◆ In the missed calls list:

The number of missed calls from this number in the form [3] ([1] = "A missed call" is not displayed)

Please note

Multiple calls from the same number are stored once in the missed calls list (the latest call). The number of calls from this number is shown in brackets after the entry.

One Withheld entry is created for all missed calls for which the number of the caller is withheld.

In addition, **one Unavailable** entry is created for every call for which the number was not transferred.

Press the talk key  or the speaker key  to call the selected caller back.

Press the **View** display key to access additional information, including for example the number linked to the name.

Use the **Options** display key to select the following options:

Copy to Directory

Copy number to the directory.

Delete Entry

Delete selected entry.

Delete List

Delete all entries.

When you exit the call lists, all entries are set to the status "old", i.e., the next time you call up the list, they will no longer be shown in bold.

Please note

In the case of each handset, only those accepted/missed calls directed to its receive connections are shown.

Opening lists with the message key

Use the message key  to open the following lists:

- ◆ Answering machine list (Gigaset C610A IP only) or Network mailbox, if your network provider supports this function and quick dial is set for the network mailbox (→ [page 133](#)).
- ◆ Incoming message list (→ [page 98](#))
- ◆ Missed calls list
- ◆ Missed alarms list

An advisory tone sounds as soon as a **new entry** appears on a list. The  key flashes. Flashing is disabled when you press the flashing key.

In **idle status**, the display shows an icon for the new message:

Icon	New message ...
	... in an answering machine list (Gigaset C610A IP only) or on the network mailboxes
	... in the Missed Calls list
	... in the SMS list or e-mail list
	... in the Missed Alarms list

The number of new entries is displayed under the corresponding icon.

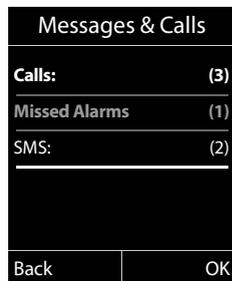

Please note

If calls are saved in the network mailbox, you will receive a message if the appropriate settings have been made (see your network provider user guide).

After pressing the message key , you can see all lists containing messages and the network mailbox lists.

Lists containing new messages are at the top of the list and are marked in a bold font.

Select a list with . To open, press **OK**.

Missed alarms list

Missed anniversaries (→ [page 80](#)) are displayed in the **Missed Alarms** list if:

- ◆ You do not accept an anniversary.
- ◆ The anniversary was signalled during a phone call.
- ◆ The handset is deactivated at the time of the anniversary.
- ◆ You open the list by pressing the **message key**  (→ [page 71](#)).

Each entry is displayed with:

- ◆ Number or name
- ◆ Date/time

The most recent entry is at the head of the list.

Press the **Delete** display key, to delete the selected entry.

If 10 entries are already stored in the list, the next appointment reminder will delete the oldest entry.

Using directories

The options are:

- ◆ (Local) directory (→ [page 73](#))
- ◆ Public online directory and Yellow Pages (→ [page 81](#))
- ◆ Gigaset.net directory (→ [page 87](#))
- ◆ Private net directory

Local handset directory

You can save a total of 150 entries in the directory.

You can create a personalised directory for your own individual handset. You can also send entries to other handsets ([page 77](#)).

Please note

You can assign numbers from the directory to the digit/display keys for quick access (quick dial) ([page 150](#)).

Directory entries

You can save the following information in a directory entry:

- ◆ First name and surname
- ◆ Up to three numbers
- ◆ E-mail address
- ◆ Anniversary with reminder
- ◆ VIP ringtone with VIP icon.

Open the directory in idle status or during an external call with the  key (press briefly).

Length of the entries

3 numbers:	Max. 32 digits each
First name and surname:	Max. 16 characters each
E-mail address:	Max. 60 characters

Saving number(s) in the directory – new entry

 → <New Entry>

▶ You can enter data in the following fields:

First Name: / Surname:

Enter first names and/or surnames.

If you do not enter a name in either of the fields, the first phone number saved in the entry is saved and displayed in place of a surname.

For instructions on entering text and special characters, → [page 216](#).

Phone (Home): / Phone (Office): / Phone (Mobile):

Enter a number in at least one of the fields.

When scrolling through the directory, prefixed icons indicate which numbers are contained in the entry:

 denotes **Phone (Home)**,  denotes **Phone (Office)**,
 denotes **Phone (Mobile)**.

E-mail:

Enter the e-mail address.

Anniversary:

Select **On** or **Off**.

With setting **On**:

Enter **Annivers. (Date)** and **Anniversary (time)** and select reminder type:

Anniversary (tone) → [page 79](#).

VIP Group:

Mark directory entry as **VIP** (Very Important Person).

You can assign one of 6 VIP groups to each entry. These groups are defined by the colour of the  icon, the name of the VIP group and the corresponding ringtone.

You recognise VIP calls by the ringtone. The ringtone animation background colour changes to the VIP group colour.

Prerequisite: Calling Line Identification ([page 55](#)).

 Press the display key.

Order of directory entries

Directory entries are generally sorted alphabetically by surname. Spaces and digits take first priority. If only the first name was entered in the directory, this is incorporated into the sort order instead of the surname.

The sort order is as follows:

- 1 Space
- 2 Digits (0–9)
- 3 Letters (alphabetical)
- 4 Remaining characters (*, #, \$ etc.)

To get round the alphabetical order of the entries, insert a space or a digit in front of the first letter of the surname. These entries will then move to the beginning of the directory.

Searching for a directory entry

 Open the directory.

You have the following options:

- ◆ Use  to scroll through the entries until the required name is selected.
 - Press  briefly to scroll on an entry-to-entry basis.
 - Press and hold  to scroll through the directory.
- ◆ Enter the first letters of the name (max. 8); use the  key to scroll to the entry if necessary. The letters entered are displayed in the bottom display line. Characters entered incorrectly can be deleted using the display key .
 - To skip to the top of the list from anywhere in the list (<New Entry>), press the end call key  briefly.

The directory searches for the surname. If a surname has not been added, then it will search for the first name.

Dialling with the directory

 →  (Select entry)

 Press the talk key.

Or during a call:

 Press the display key.

If the entry only contains one phone number, this is the number that is dialled.

If the entry contains several numbers, the icons for the numbers stored are displayed:  /  / .

 Select a number.

 /  Press the talk key or display key. The number is dialled.

Please note

When dialling, you can link several numbers from the directory (e.g., a call-by-call number to a telephone number, → [page 92](#)).

Managing directory entries

Viewing entries

 →  (Select entry)

View /  Press the display key or the middle of the control key. The entry will be displayed.

 Scroll through the entry if necessary.

Using other functions

Prerequisite: the directory was opened while the handset was in idle status.

Options Press the display key.

You can select the following functions with :

Display Number

To edit or add to a saved number, or to save it as a new entry, press  after the number is displayed. Select the number for the entry, if necessary, and change or edit the saved number before dialling with , or press  to save as a new entry.

Delete Entry

Delete selected entry.

Copy Entry

- **to Internal:** Send a single entry to a handset (→ [page 77](#)).
- **vCard via SMS:** Send a single entry in vCard format via SMS.

Editing entries

 →  (Select entry)

View **Change**
Press the display keys one after the other.

▶ Perform changes and save.

Using other functions

When the handset is in idle status:

 →  (Select entry) → **Options** (Open menu)

You can select the following functions with :

Display Number

(see above/[page 76](#))

Edit Entry

Edit selected entry.

Delete Entry

Delete selected entry.

Copy Entry

(see above/[page 76](#))

VIP Groups

Edit VIP group name and ringtone. To do this:

Select VIP group → **Edit** → Edit entry → **Save**.

Delete List

Delete **all** entries in the directory.

Copy All

to Internal: Send the complete list to a handset (→ [page 77](#)).

Available Memory

Display the number of entries that are still available in the directory.

Exchanging directory/entries with other handsets

You can send entries from the local directory or the complete local directory to handsets as well as receive directory entries from the handsets.

Please note:

- ◆ Entries with identical numbers are not overwritten on the receiving handset.
- ◆ The transfer is cancelled if the phone rings or the receiver's memory is full.
- ◆ Pictures and sounds assigned to entries are not transferred.

Prerequisites:

- ◆ The sending and receiving handsets must both be registered to the same base.
- ◆ The other handset can send and receive directory entries.

Sending a directory/directory entries to a handset

 →  (Select entry) → **Options** (Open menu) → **Copy Entry / Copy All**
→ **to Internal**

 Select the internal number of the receiving handset and press **OK**.

The transfer begins.

You can transfer several individual entries one after the other by responding to the **Entry copied - Copy next entry?** prompt with **Yes**, selecting the entry and pressing the middle of the control key .

A successful transfer is confirmed by a message and confirmation tone on the receiving handset.

Please note

The transfer is interrupted in the event of an external incoming call.

Receiving a directory/directory entries from a handset

Prerequisite: the handset is in idle status.

- ▶ Start the transfer of directory entries on the handset as described in the handset user guide.

If the data has been transferred successfully, the display on your handset will indicate the number of entries received (so far).

Adding a displayed number to the directory

You can add numbers to the directory:

- ◆ From a list e.g., the call list, answering machine list, incoming SMS message list or the redial list
- ◆ From the text of an SMS
- ◆ From a public online directory or the Yellow Pages
- ◆ From your private net directory
- ◆ When dialling a number

A number is displayed:

Options → **Copy to Directory**

Or:

 Press the display key.

The directory is opened. You can create a new entry or extend an existing entry.

 Select **<New Entry>** or the directory entry and press **OK**.

 Select the type of phone number  /  /  and press **OK**.
The number is copied into the corresponding field.

If the number field is already occupied, **Overwrite existing number?** is displayed.

Yes Press the display key to overwrite the number. If you select **No**, you are asked to select another type of phone number.

▶ If necessary, complete the entry (→ [page 74](#)).

Please note

For a new entry:

- ◆ If you are copying a number from an online directory, the surname or nickname (if available) are copied into the **First Name** field.
- ◆ The message playback is interrupted during the number transfer from the answering machine list.

Copying a number or e-mail address from the directory

In some operating situations, you can open the directory to copy a number or e-mail address, for example. Your handset need not be in idle status.

▶ Depending on the operating situation, open the directory with  or .

 Select entry (→ [page 75](#)).

Saving an anniversary in the directory

For each entry in the directory, you can save an anniversary and specify a time at which a reminder call should be made on the anniversary (default setting: **Off**).

 →  (Select entry)

View **Change**

Press the display keys one after the other.

 Scroll to the **Anniversary:** line.

 Select **On**. The following fields are displayed.

▶ You can enter data in the following fields:

Annivers. (Date)

Enter day/month/year in 8-digit format.

Anniversary (time)

Enter the hour/minute for the reminder call in 4-digit format.

Anniversary (tone)

Select the reminder type.

Save

Press the display key.

Please note

A time must be specified for reminder calls. If you select a visual signal, a time is not required and is automatically set to 00.00.

Deactivating anniversaries

 →  (Select entry)

View **Change**

Press the display keys one after the other.

 Scroll to the **Anniversary:** line.

 Select **Off**.

Save

Press the display key.

Anniversary reminder call

In **idle status**, a reminder call is shown in the display of the handset (→ [page 4](#)) and signalled with the selected ringtone.

You can:

SMS Write an SMS.

OFF Press the display key to acknowledge and end the reminder call.

When you are on the phone, a reminder call is indicated on the handset with a **single** advisory tone.

Anniversaries that are indicated during a call and are not acknowledged are entered in the **Missed Alarms** list (→ [page 72](#)).

Using online directories

You can use public online directories (online directories and classified directories e.g., "Yellow Pages") depending on your provider.

You can configure the online directories you wish to use via the Web configurator.

Exclusion of liability

Gigaset Communications GmbH assumes no guarantee or liability for the availability of this service. The service may be discontinued at any time.

Opening an online directory/Yellow Pages

Prerequisite: the handset is in idle status.

Press and **hold**.

This opens the list of online directories. Provider-specific names appear in the display.

Select a directory (online directory or Yellow Pages) from the list and press **OK**.

This establishes a connection to the online directory or the Yellow Pages.

If there is only one online directory available, a connection is immediately established if you press and **hold** down the control key

Please note

You can also establish a connection to the online directory as follows:

- ▶ When the handset is idle, dial **1#91** and press the talk key .
- ▶ To establish a connection to the Yellow Pages, dial **2#91**.
- ▶ To establish a connection to the Gigaset.net directory, dial **1188#9**.

Calls to the online directory are always free of charge.

Searching for an entry

Prerequisite: you have opened the online directory/Yellow Pages.

- ▶ You can enter data in the following fields:

Surname: (online directory) or

Category/Name: (Yellow Pages)

Enter the name, part of a name or the category (max. 30 characters).

City: Enter the name of the town/city in which the party you are searching for lives (max. 30 characters).

If you have already completed a search, the last names of the towns/cities you entered are displayed (maximum of five).

You can enter a new name or select one of the city names displayed using and confirm with **OK**.

Or:

Number: Enter the number (max. 30 characters).

- ▶ Press the display key **Search** or to start the search.

Using directories

You must make an entry in **Surname** or **Category/Name:** and in **City** or in **Number**. Searching by number is only possible if supported by the online directory you have selected. For instructions on entering text see [page 216](#).

A list of the towns/cities found is displayed if the search returns more than one result:

Select the town/city.

If the name of a town/city is longer than one line, it is abbreviated.

Select **View** to view the complete name.

If no matching town/city is found: Press **Change** to change the search criteria. The entries for **Category/Name** and **City** are copied and you can change them.

Search

Press the display key to continue the search.

A corresponding message will appear on the display if no party is found to match the search criteria. You have the following options:

▶ Press the display key **New** to start a new search.

Or

▶ Press the display key **Change** to change the search criteria. The name and town/city are copied over and you can change them.

No hits are displayed if the list of hits is too large. A message to this effect is displayed.

▶ Press the display key **Refine** to start a refined search (→ [page 84](#)).

Or

▶ Depending on the provider, you can view the list if the number of hits is shown on the display. Press the display key **View**.

Search result (hit list)

The search result is shown as a list on the display. Example:

1. 1/50: Consecutive number/total number of hits (only the consecutive number is displayed if the total number of hits >99).
2. Four lines including party's name, category, telephone number and address (possibly abbreviated). If a fixed line number is not available, the mobile number (if available) is displayed.

You have the following options:

- ▶ You can scroll through the list with .
- ▶ Press the display key **View**. Displays the full details of the entry (name, category where applicable, address, telephone numbers). You can scroll through the entry with .

Use **Options** to access the following options:

Refine search

Refine search criteria and restrict hit list (→ [page 84](#)).

New search

Start a new search.

Copy to Directory

Copy an entry to the local directory. If an entry contains several numbers, they are displayed in a selection list. A new entry is created for the selected number. The surname is transferred to the **Surname** field of the local directory (→ [page 78](#)).

Copy to Private NetDir.

Transfer the selected entry to the private net directory. The private directory and online directory must be provided by the same provider.

Depending on your provider, you can add a nickname to the entry in your private directory.

Calling subscribers

Prerequisite: a hit list is displayed.

- ▶ Select the entry and press the talk key .

If the entry only contains one phone number, this is the one that is dialed.

A list of numbers appears if there is more than one number.

- ▶ Using , select a number and press the display key **Dial**.

Starting a refined search

You can use the search options available in the refined search (first name and/or street) to limit the number of hits returned by a previous search.

Prerequisite: a search result is displayed (hit list with multiple entries or a message indicating too many hits).

Refine Press the display key.

Or

Options → **Refine search**
Select and press **OK**.

The search criteria from the previous search are copied and entered in the corresponding fields.

Surname: (online directory) or

Category/Name: (Yellow Pages)

If necessary, change the name/category or extend the partial name.

City: Name of the city/town from the previous search is shown (cannot be changed).

Street: If necessary, change the name of the street (max. 30 chars.).

First Name: (only in the online directory)

If necessary, enter the first name (max. 30 characters).

Search Start refined search.

Using the private net directory

Some providers offer users the option of creating and managing a private net directory on the Internet.

The advantage of an online directory is that you can call up entries from any telephone or PC, e.g., from your VoIP phone in the office or your PC at a hotel.

You can use the private net directory on your handset.

Prerequisites:

- ◆ Create your private net directory using your PC's Web browser.
- ◆ Create and manage entries in the online directory via your PC's Web browser.
- ◆ Activate the online directory on your phone using the Web configurator. You must save the username and password in particular for accessing your personal online directory on the phone.

You can use the directory from every registered handset.

Opening the online directory

Prerequisite: the handset is in idle status.

 Press and **hold**.

This opens the list of (online) directories. The provider-specific name is displayed for the private net directory.

 Select the private online directory from the list and press **OK**.

Your private online directory is opened.

Please note

If there is no other online directory available apart from the private online directory:

- ▶ Press  **briefly**. The private online directory opens.
- ▶ Press and **hold** . The handset's local directory opens.

The entries in the online directory are sorted alphabetically according to the first non-space field in the entry. This is generally the nickname or surname.

Selecting, viewing and managing entries in the online directory

Prerequisite: the online directory is open (see above).

- ▶ Scroll with  to the required entry.

Or:

Enter the first letter of the name and scroll with  to the required entry.

- ▶ Press the display key **View**.

The detailed view with the complete entry opens. You can scroll through the entry with the control key .

The following data is shown, if available (in the sequence specific to the provider):

Nickname, name, first name, phone number, mobile number, VoIP number, street, house number, post code, town/city, company name, category, date of birth, e-mail.

Using other functions

Options Press the display key.

You can select the following functions with :

Edit nickname

You can edit or delete the nickname in an entry. Press **Save** to save the change.

Copy to Directory

Copy an entry to the local directory ([→ page 78](#)).

Please note

You can copy numbers from a public directory to your private online directory ([→ page 83](#)).

Calling up an entry in the online directory

Prerequisite: you have opened the online directory.

 Select entry (open the details view, if necessary).

 Press the talk key.

If the entry only contains one phone number, this is the one that is dialled.

If the entry contains more than one phone number (e.g., mobile number and phone number), they are offered to you for selection.

 Select the number to be dialled.

OK Press the display key.

The selected phone number is dialled.

Transferring the local directory to the private online directory

You can save entries in the local directory in vCard format as a vcf file on your PC using the Web configurator ([→ Web configurator on page 196](#)).

Several providers support functions on your Web pages that you can use to copy these files to the online directory.

Using the Gigaset.net directory

The handset is in idle status.

Press and **hold**.

This opens the list of online directories.

Gigaset.net

Select and press **OK**.

The Gigaset.net directory opens.

Please note

- ◆ Calls to the Gigaset.net directory are always **free of charge**.
- ◆ You can also open the Gigaset.net directory by dialling **1188#9** (phone number of the Gigaset.net directory) and pressing the talk key .

If a connection cannot be established with the Gigaset.net directory, an error message is sent and the handset will return to idle status.

Opening the Gigaset.net directory for the first time

When you open the Gigaset.net directory for the first time, you are asked to enter a nickname for your connection. You are entered in the Gigaset.net directory under this name.

- ▶ Using the keypad, enter the name that you would like to be listed under in the Gigaset.net directory. The name may contain a maximum of 25 characters.
- ▶ Press the right-hand display key **Save**.

Data protection notice

If you enter a nickname at this point, it is stored on a central Gigaset server. The nickname appears in the Gigaset.net directory, and other subscribers that use the Gigaset.net service can call you using this nickname.

By entering your data, you agree to having your data saved. If you do not wish this to happen, you can cancel the operation at this point.

Cancel operation:

Do **not** enter a name and press the display key **Save**. You can use the directory to search for other Gigaset.net subscribers and call them. However, no nickname is entered for you (your phone).

Or:

Press and **hold** the end call key  to exit the Gigaset.net directory (without performing a search).

Further information about the Gigaset.net service data saved can be found at www.gigaset.net/privacy-policy

If an entry with this name already exists, the message **Nickname already exists. Please change.** is displayed. You are prompted to enter a name again.

Searching for subscribers in the Gigaset.net directory

Once the connection to the Gigaset.net directory has been established, you are asked to enter a name that you want to search for.

Gigaset.net name:

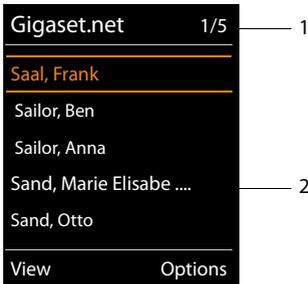

Enter the name or part of a name (max. 25 characters).

Search

Press the display key to start the search.

If the search has been successful, a hit list is displayed containing all the names that begin with the specified character string.

Example:

1. 1/5: Entry number/number of hits

2. Name of an entry, possibly abbreviated

You can scroll through the hit list with .

If **no matching** entry is found, a corresponding message is displayed. You have the following options:

- ▶ Press the display key **New** to start a new search.

Or

- ▶ Press the **Change** display key to change the search criteria. The name you previously entered in the search field is used as search criterion. You can then expand or edit as required.

If there are **too many matching** entries in the Gigaset.net directory, the message **Too many entries found** is displayed instead of a hit list.

- ▶ Press the display key **Refine** to start a refined search. The previously entered name is copied and you can edit/expand it.

Calling subscribers

-  Select the subscriber from the hit list and press the talk key.

Viewing the subscriber's number

-  Select the subscriber from the hit list.

- View** Press the display key.

The display shows the Gigaset.net number and the subscriber's name, whereby the name may appear over a number of lines.

-  Display the name and number of the next/previous subscriber in the hit list.

Please note

- ◆ Connections to Gigaset.net are always established via the Internet. This is regardless of the send connection configured/selected on your handset.
- ◆ You can open the Gigaset.net directory and establish connections, even if you have not entered yourself in the Gigaset.net directory.

Using other functions

Prerequisite: the hit list is displayed.

-  (Select entry) → **Options**

You can select the following functions with :

Copy to Directory

Copy the number to the handset directory. The number and name (abbreviated if necessary, max. 16 characters) are copied to the local directory.

- ▶ Edit and save the entry where necessary (→ [page 74](#)).

The hit list is displayed again.

New search

Start a search with a new name (→ [page 88](#)).

Refine search

Start a refined search. The name previously searched for is copied and you can edit/expand it.

Own Details

See "[Entering, editing and deleting own entry](#)" on [page 90](#).

Please note

If you select a Gigaset.net number from the local directory, the connection is automatically established via Gigaset.net (Internet).

Entering, editing and deleting own entry

You have the following options:

- ◆ Edit the name of your entry in the Gigaset.net directory.
- ◆ Delete your entry from the Gigaset.net directory.

Viewing your own entry

You are connected to the Gigaset.net directory and have performed a search. A hit list is displayed:

- ▶ Select **Options** → **Own Details** and press **OK**.

Your Gigaset.net number and, where applicable, your current name are displayed.

Entering/editing a name

Change

Press the display key.

Edit the name or enter a new name (max. 25 characters) and press **OK**.

You can delete the name with **<C**.

Data protection notice

If you enter a nickname at this point, it is stored on a central Gigaset server. The nickname appears in the Gigaset.net directory, and other subscribers that use the Gigaset.net service can call you using this nickname.

By entering your data, you agree to having your data saved. If you do not wish this to happen, you can cancel the operation at this point.

Cancel operation:

- ▶ Do **not** enter a name (or delete the name currently entered) and press the display key **Save**. You return to the hit list.

Or:

- ▶ Press and **hold** the end call key to return to the hitlist.

Further information about the Gigaset.net service data saved can be found at www.gigaset.net/privacy-policy

If there is no existing entry with this name in the Gigaset.net directory, the name is saved. A message to this effect is displayed. The handset switches to idle status.

If there is already an entry with this name, or the entered name contains impermissible characters, you are requested to enter a different name.

If an entry was created successfully in the Gigaset.net directory, the message "**Saved**" is displayed.

Please note

- ◆ If you delete the name, your entry is deleted from the directory. You are no longer "visible" to other Gigaset.net subscribers. However, you can still be reached via your Gigaset.net number. For instructions on displaying the number, → [page 211](#).
- ◆ You can also enter/edit your Gigaset.net name via the Web configurator.

Calling a Gigaset.net subscriber

You can call a Gigaset.net subscriber directly via the Gigaset.net directory (see above) or via their Gigaset.net number:

Enter the Gigaset.net number (including the #9) or select it from the local directory.

Press the talk key.

Every number ending with #9 is dialled via Gigaset.net.

Making cost-effective calls

Make phone calls through a network provider who offers particularly low-cost call rates (call-by-call; fixed line only).

Using the Internet (VoIP) is the preferred cost-effective way of making calls.

Defining dialling plans

You can also use your phone's cost control function for calls to fixed line or mobile networks. In addition to your fixed line connection, you can open accounts with various VoIP providers offering favourable rates for calls to other networks. In the phone configuration, define the best connections (account), e.g., for specific regional, national and mobile network codes, to be used when calls are made (→ Web configurator, **User-defined dialling plans – specifying rules for telephony, page 192**). Or define the send connection to be used when you actually dial the number (dialling via line selection, → **page 52**).

Linking a number with a call-by-call number

You can predial call-by-call numbers for calls via your fixed line connection. Use the call-by-call numbers to select the network of a cost-effective provider for a call.

You can store the call-by-call numbers from several network providers in the local directory (→ **page 74**).

To prefix a number with a call-by-call number ("linking"), when the handset is in idle status:

 Press **briefly** to open the local directory.

 Select entry (call-by-call number).

Options Press the display key.

Display Number

Select and press **OK**.

The call-by-call number is shown on the display.

  Enter the phone number and press the talk key.

Or:

 Press **briefly** again to copy the number from the local directory.

 Select entry (→ **page 75**).

 If there are several numbers stored in the entry:
Select the number and press **OK**.

 Press the talk key. Both numbers are dialled.

Displaying the call duration

The **duration** of each call appears in the display for all external calls

- ◆ During the conversation
- ◆ Until approximately 3 seconds after replacing the receiver.

Please note

The actual duration of the call can vary from that shown by a few seconds.

Sending SMS (text messages)

You can use your telephone to send and receive SMS messages via the fixed line and VoIP.

You must specify the line via which SMS are sent. You can receive SMS messages (abbreviation: SMS) via all of your phone's connections except for Gigaset.net.

Your telephone is delivered ready to send SMS messages as soon as the phone is connected to the fixed line. If you do not specify any settings the SMS messages are sent via the fixed line.

Prerequisites:

- ◆ Calling Line Identification is enabled for the VoIP connections/fixed line via which you wish to send/receive SMS messages. Calling Line Identification must not be withheld → [page 60](#).
- ◆ Your network provider supports the SMS service (information on this is available from your network provider).
- ◆ To receive SMS messages, you must be registered with your SMS service provider. This happens automatically when you send the first SMS via the provider's service centre.

Writing/sending SMS

Writing an SMS

 →  **Messaging** → **SMS**

New SMS Select and press **OK**.

Write SMS.

Please note

- ◆ For instructions on entering text and special characters, → [page 216](#).
- ◆ An SMS can be up to 612 characters. If there are more than 160 characters, the SMS is sent as a **linked** SMS (up to 4 SMS messages with 153 characters each). The top right of the display shows how many characters are still available and the number in brackets shows which part of a linked SMS is currently being written. Example **447 (2)**.
- ◆ Please note that linking SMS messages usually incurs higher charges.

Sending an SMS

Options Press the display key.

Send Select and press **OK**.

SMS Select and press **OK**.

Select number with area code (even if you are in that area) from the directory or enter directly. For sending SMS messages to an SMS mailbox: add the mailbox ID to the **end** of the number.

Send Press the display key. The SMS is sent.

Please note

- ◆ If you are interrupted by an external call while writing an SMS, the text is automatically saved in the draft list.
- ◆ If the memory is full, or if the SMS function is being used by a handset, the operation is cancelled. An appropriate message appears in the display. Delete SMS messages you no longer require or send the SMS later.

SMS status report

Prerequisite: your network provider supports this feature.

If you have activated the status report, you will receive an SMS with a confirmation message after sending.

Activating/deactivating a status report

→ **Messaging** → **SMS** → **Settings**

Status Report

Select and press **Change** (= on).

Reading/deleting status report/saving number to directory

▶ Open the incoming message list (→ [page 98](#)) and then:

Select SMS with **State OK** or **State not OK** status.

Read Press the display key.

◆ **Delete:**

Options → **Delete Entry** → **OK**.

◆ **Copy to directory:**

Options → **Copy to Directory** → **OK**.

◆ **Delete entire list:**

Options → **Delete List** → **OK**.

Draft list

You can save an SMS in the draft list and edit and send it later.

Saving an SMS in the draft list

▶ You are writing an SMS (→ [page 94](#)).

Options Press the display key.

Save Select and press **OK**.

After saving, the SMS editor will be displayed again with your SMS. You can continue writing the text and save it again. The SMS that was saved previously will be overwritten.

Opening the draft list

 →  **Messaging** → **SMS** → **Draft**

The first list entry is displayed, for example:

If the entry has been saved with the phone number e.g., when an SMS was saved from the incoming list, the number is displayed in the first line.

Reading or deleting SMS messages

▶ Open the draft list and then:

 Select SMS.

Read Press the display key. The text is displayed. Scroll line by line using .

Or delete the SMS with

Options → **Delete Entry** → **OK**.

Writing/changing an SMS

▶ You are reading an SMS in the draft list.

Options Open menu.

You have the following options:

Send

Send stored SMS (→ [page 95](#)).

Edit

Edit the text of the saved SMS and then send it (→ [page 95](#)).

The SMS that was saved previously remains unaltered in the draft message list

Character Set (one SMS is opened for reading)

Select the character set to be used to show the text (→ [page 99](#)). The setting only applies to the current SMS.

Deleting the draft list

► Open the draft list and then:

Options Open menu.

Delete List

Select, press **OK** and confirm with **Yes**. The list is deleted.

Sending SMS messages to an e-mail address

If your service provider supports the **SMS as e-mail** feature, you can also send your SMS messages to e-mail addresses.

The e-mail address must be at the beginning of the text. You must send the SMS to your SMS service centre's e-mail service.

 →  **Messaging** → **SMS** → **New SMS**

E-mail / **Options** → **Insert E-mail Adr.** / 

Load the e-mail address from the directory or enter it directly. End the entry with a space or colon (depending on the service provider).

Enter the SMS text.

Options Press the display key.

Send Select and press **OK**.

E-mail Select and press **OK**. If the number of the e-mail service is not entered (→ [page 103](#)), enter the number of the e-mail service.

Send Press the display key.

Sending SMS messages as a fax

You can also send an SMS to a fax machine.

Prerequisite: your network provider supports this feature.

► You are writing an SMS (→ [page 94](#)).

Options Press the display key.

Send Select and press **OK**.

Fax Select and press **OK**.

Select number from the directory or enter it manually. Enter the number with area code (even if you are in the same area).

Send Press the display key.

Receiving an SMS

All received SMS messages are saved in the incoming list. Linked SMS messages are displayed as **one** message. If this is too long or is not transferred completely, it is split into individual messages. Since an SMS remains in the list even after it has been read, **regularly delete SMS messages from the list**.

The display tells you if the SMS memory is full.

- ▶ Delete SMS messages you no longer require (→ [page 99](#)).

Please note

Each incoming SMS on the fixed line connection is signalled by a single ring (ringtone as for external calls). If you accept the "call", the SMS is lost. To prevent this ring, suppress the first ringtone for all external calls (→ [page 104](#)).

Incoming list

The incoming list contains:

- ◆ All received SMS messages regardless of the connection it was intended for. All received SMS messages are displayed on all handsets.
- ◆ SMS messages that could not be sent due to an error.

New SMS messages are indicated by the  icon in the display, the  message key flashing and an advisory tone sounding.

Opening the incoming list with the key

 Press.

The incoming list displays the number of entries (example):

SMS: (2)

Bold: new entries

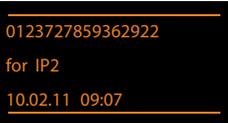

Normal font: old entries

- ▶ Open list with **OK**.

Every entry in the list contains:

- ◆ The number or name of the sender
- ◆ The receive connection to which the SMS is addressed
- ◆ The date of receipt

Example:

0123727859362922
for IP2
10.02.11 09:07

Opening the incoming list via the SMS menu

 →  Messaging → SMS → Incoming

Deleting the incoming list

All **new and old** SMS messages in the list are deleted.

▶ Open the incoming list.

Options Open menu.

Delete List

Select, press **OK** and confirm with **Yes**. The list is deleted.

Reading or deleting SMS messages

▶ Open the incoming list, then:

 Select SMS.

Read Press the display key. The text is displayed. Scroll line by line using 

Or delete the SMS with

Options → **Delete Entry** → **OK**.

After you have read a new SMS, it is given the status "Old" (is no longer shown in bold).

Changing the character set

If you cannot see any text or symbols, the SMS may have been written with a different character set (Cyrillic, Greek etc.).

▶ Read the SMS

Options Press the display key.

Character Set

Select and press **OK**.

 Select character set (e.g., **Turkish, Greek**) and press the display key **Select** ( = on).

The text is shown in the selected character set. The setting only applies to the current SMS.

Replying to or forwarding SMS messages

▶ Read the SMS

Options Press the display key.

You have the following options:

Reply

Write and send a new SMS to the sender (→ [page 94](#)).

Edit

Edit the text in the SMS and return it to the sender (→ [page 95](#)).

Forward

Forward the SMS to another number (→ [page 95](#)).

Copying the number to the directory

Copying the sender's number

- ▶ Open the incoming list and select the SMS (→ [page 98](#)).

Options → **Copy to Directory**

- ▶ Complete the entry (→ [page 74](#)).

Please note

An attached mailbox identifier is added to the directory.

Copying/dialling numbers from an SMS

- ▶ Read the SMS and scroll to the telephone number.

The digits are highlighted.

 Press the display key.

Complete the entry (→ [page 74](#)).

Or:

 Press the talk key to dial the number.

If you wish to use the number to send an SMS:

- ▶ Save the number with the local area code (dialling code) in the directory.

If an SMS contains several numbers, the next number will be highlighted if you scroll down until the first number disappears from the display.

Please note

- ◆ The + symbol is not transferred for international area codes.
 - ▶ You should then enter '00' at the start of the number.
- ◆ If there are no more entries available in the directory, you can only overwrite or modify an existing entry.

SMS with vCard

The vCard is an electronic business card. It is indicated by the  icon in the body of the SMS.

A vCard can include:

- ◆ Name
- ◆ Private number
- ◆ Business number
- ◆ Mobile number
- ◆ Birthday

Individual entries in a vCard can be saved to the directory one after the other.

Opening the vCard

- ▶ Read the SMS containing the vCard.

View Press the display key to open the vCard.

Then:

Back Press the display key to return to the SMS text.

Or:

Select the number.

Save Press the display key.

When you save a number, the directory is opened automatically. The number and name are copied. If a birthday is entered on the vCard, the date is copied to the directory as an anniversary.

- ▶ If necessary, edit the entry in the directory and save it. You will return to the vCard automatically.

Receiving notifications via SMS

You can be notified via SMS about missed calls or on the Gigaset C610A IP about new answering machine messages.

Prerequisite: the caller's number (CLI) must have been transmitted in the missed call.

Notification is sent to your mobile phone or another phone with SMS functionality. You only need to save the telephone number to which you wish the notification to be sent.

Please note

Your provider will usually charge for SMS notifications.

 →  **Messaging** → **SMS** → **Settings** → **Notification**

▶ You can enter data in the following fields:

To:

Enter the number (including area code) to which the SMS is to be sent.

On Missed Call:

Select **On** if you require SMS notification.

Msg. on Answer M.:

Select **On** if you require SMS notification.

Save

Press the display key.

Warning

Do **not** enter your own network number for the notification of missed calls. This can lead to chargeable endless looping.

Setting the SMS service centre/defining the send line

SMS messages are exchanged between SMS service centres operated by service providers. You must enter the SMS service centre through which you wish to send and receive SMS messages into your phone. You can receive SMS messages from **every** SMS service centre that is entered, provided you have registered with your service provider. This happens automatically when you send the first SMS via the relevant service centre.

Your SMS messages are sent via the **SMS service centre** that is entered as the **active send service centre**. However, you can activate any other SMS centre as the active send service centre to send a current message (→ [page 103](#)).

If no SMS service centre is entered, the submenu **SMS** only consists of the entry **Settings**. Enter an SMS Service Centre (→ [page 103](#)).

Entering/changing SMS service centres

- ▶ Find out about the services and special functions offered by your service provider **before you make a new application** and/or before you delete pre-configured numbers.

 →  **Messaging** → **SMS** → **Settings** → **Service Centres**

 Select an SMS centre (e.g., Service Centr. 1) and press **Edit**.

- ▶ You can enter data in the following fields:

Active Send:

Select **Yes** if SMS should be sent via the SMS service centre. For the SMS centres 2 to 4, the setting only applies to the next SMS.

SMS Service Centre no.:

Enter the number of the SMS service.

E-mail Service no.:

Enter the number of the e-mail service.

Send via:

Select the fixed line or VoIP connection that you want to use to send the SMS messages.

Save Press the display key.

Please note

- ◆ If you have selected a VoIP connection and the attempt to transmit the SMS messages fails, the SMS is stored in the incoming message list with error status. Even if you have activated the **Automatic Fallback to Fixed Line** option (→ [Web configurator](#)), your telephone will not attempt to send the SMS via the fixed line.
- ◆ If the selected send connection is deleted from the configuration, the fixed line connection in the configuration is used.

Sending SMS (text messages)

Sending an SMS via another SMS service centre

- ▶ Select **Service Centr. 2, 3 or 4** and activate it as the send service centre (set **Active Send = Yes**). **Service Centr. 1** is automatically deactivated as the send service centre for the next SMS.
- ▶ Send the SMS.

This setting only applies to the next SMS to be sent. After that the setting **Service Centr. 1** is reinstated.

Activating/deactivating first ringtone muting

Every SMS addressed to your fixed line connection is indicated by a single ring. To prevent this ring, suppress the first ringtone for all external calls on your fixed line connection.

 Open the main menu.

Press keys in sequence.

  Make the first ringtone audible.

Or:

  Mute the first ringtone.

Activating/deactivating SMS function

If you deactivate the SMS function, you cannot send or receive any SMS messages with your phone.

The settings you have made for sending and receiving SMS messages (e.g., the numbers of the SMS service centres) and the entries in the incoming and draft lists are saved even after deactivation.

 Open the main menu.

Enter the digits.

  Deactivate the SMS function.

Or:

  Activate the SMS function (default setting).

Troubleshooting SMS problems

Error codes when sending

E0	Calling Line Identification permanently restricted (CLIR) or Calling Line Identification not activated.
FE	Error occurred during SMS transfer.
FD	Connection to SMS service centre failed; see self-help.

Self-help with errors

The following table lists problem situations and possible causes and provides advice on troubleshooting.

<p>You cannot send messages.</p> <ol style="list-style-type: none"> You have not requested/enabled the Calling Line Identification Presentation (CLIP) feature. <ul style="list-style-type: none"> Ask your service provider to enable this service. SMS transmission has been interrupted (e.g., by a call). <ul style="list-style-type: none"> Re-send the SMS. The provider does not support this feature. No number or an invalid number is entered for the SMS service centre set as the active send service centre. <ul style="list-style-type: none"> Enter the number (→ page 103).
<p>You receive an incomplete SMS.</p> <ol style="list-style-type: none"> Your phone's memory is full. <ul style="list-style-type: none"> Delete old SMS messages (→ page 96). The service provider has not yet sent the rest of the SMS.
<p>You have stopped receiving SMS messages.</p> <p>Call divert is activated for All Calls or call divert is activated for All Calls for the network mailbox.</p> <ul style="list-style-type: none"> Change the call divert settings (→ page 61).
<p>The SMS is played back.</p> <ol style="list-style-type: none"> The "display call number" feature is not activated. <ul style="list-style-type: none"> Ask your service provider to enable this feature (there is a charge for this). No agreement is in place between your mobile operator and your fixed line SMS service provider. <ul style="list-style-type: none"> Obtain information from your fixed line SMS service provider. Your terminal has been recorded by your SMS provider as having no fixed line SMS functionality i.e., you are not registered with the provider. <ul style="list-style-type: none"> Send any SMS to automatically register your telephone to receive SMS.
<p>Messages are only received during the day.</p> <p>The terminal is recorded in your SMS provider's database as having no fixed line SMS functionality i.e., you are not registered with the provider.</p> <ul style="list-style-type: none"> Obtain information from your fixed line SMS service provider. Send any SMS to automatically register your telephone to receive SMS.

E-mail notifications

Your phone will notify you when new e-mail messages have been received on your POP3 server.

You can set your phone to periodically connect to your POP3 server and check whether you have new messages.

Any new e-mail messages that have been received are displayed on the handset: you will hear an advisory tone, the message key  will flash and the  icon will be displayed in the idle display.

Please note

- ◆ The  symbol is also displayed when you have new SMS messages.
- ◆ If new e-mail messages have been received, pressing the message key  will display them in the **E-mail** list.

Using the handset, you can display the sender, date/time of receipt and the subject and message text (abbreviated if necessary) for each e-mail in the incoming e-mail list (→ [page 107](#)).

The prerequisite for displaying the e-mail messages on the handset is that you have used the Web configurator to save the name of the POP3 server and your personal access data (account name, password) in the phone (→ [page 196](#)).

Please note

If you have also activated the authentication of the phone with the POP3 server via a secure connection in the Web configurator and this fails, the e-mail messages are not downloaded to your phone.

In this case, pressing the flashing message key  will display the message **Certificate error - Please check your certificates in the Web configurator..**

- ▶ Press the display key  to confirm the message.
- ▶ Log in to the Web configurator (→ [page 179](#)). The **Security Web** page (→ [page 190](#)) tells you why the secure connection could not be established and what you can do.

Opening the incoming e-mail list

Prerequisites:

- ◆ You have set up an e-mail account with an ISP.
- ◆ The incoming e-mail server uses the POP3 protocol.
- ◆ The name of the POP3 server and your personal access data (account name, password) are stored in the phone.

 →  **Messaging** → **E-mail**

Or if new e-mail messages have been received (message key  flashes):

 → **E-mail**

The phone establishes a connection to the POP3 server. A list of e-mail messages that are stored there is displayed.

New unread messages appear above old read messages. The most recent entry is at the head of the list.

The following details are displayed for each e-mail: name or e-mail address of the sender (one line, abbreviated if necessary) and date and time (date and time will only display correct values if sender and recipient are located in the same time zone).

Example display:

E-mail Incoming	
Frank.Miller@mailp.com	
10.02.11	15:40
Happy Birthday	
Anna Sand

Read	Delete

- 1 E-mail address or name transmitted by the sender (abbreviated if necessary)

Bold: new message.

All e-mail messages that were not present in the incoming e-mail server when the inbox was last opened are identified as "new". All other e-mails are not marked, regardless of whether or not they have been read.

- 2 Date and time of receipt of e-mail message

If the inbox on the incoming e-mail server is empty, **No entries** will appear in the display.

Please note

Many e-mail providers activate spam protection measures by default. E-mail messages classified as spam are stored in a separate folder and are therefore not shown in the incoming mail list.

Some e-mail providers allow you to deactivate spam protection or show spam e-mails in the incoming mail list.

Other e-mail providers may send a message to the inbox when a new spam e-mail is received. This is to inform you that a suspected spam e-mail has been received.

The date and sender of this mail are repeatedly updated, so that it is always displayed as a new message.

Messages when establishing a connection

The following problems may occur when connecting to the POP3 server. The messages are displayed in the display for a few seconds.

Server not accessible

The connection to the POP3 server could not be established. This may have the following causes:

- Incorrect entry for the name of the incoming e-mail server (→ Web configurator).
- Temporary problems with the POP3 server (server is down or is not connected to the Internet).
 - ▶ Check settings in the Web configurator.
 - ▶ Try again later.

Currently not possible

The resources your phone requires to make the connection are busy, e.g.:

- The permitted number of VoIP connections has already been reached.
- One of the registered handsets is currently connected to the POP3 server.
 - ▶ Try again later.

Login failed

Error when logging in to the POP3 server. This may have the following cause:

- Incorrect entries for name of POP3 server, user name and/or password.
 - ▶ Check settings (→ Web configurator).

Mailbox settings incomplete

Incomplete entries for name of incoming e-mail server, user name and/or password.

- ▶ Check/add to settings (→ Web configurator).

Viewing the message header and text of an e-mail

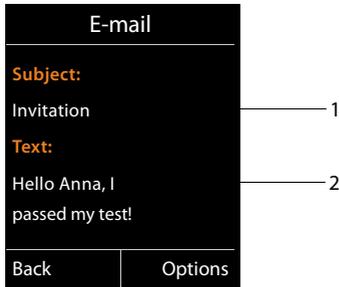

Prerequisite: you have opened the incoming mail list (→ [page 107](#)).

 Select an e-mail entry.

Read Press the display key.

The subject of the e-mail (maximum of 120 characters) and the first few characters of the text are displayed.

Example display:

1 **Subject** of the e-mail message. A maximum of 120 characters are displayed.

2 **Text** of the e-mail message. A maximum of 560 characters are displayed.

 Press the end call key to return to the incoming message list.

Please note

If the e-mail does not contain any standard text, the message **E-mail can't be displayed** will briefly appear.

Viewing e-mail sender's address

Prerequisite: you have opened the e-mail notification to read it (→ [page 109](#)).

Options → **From**
Select and press **OK**.

The sender's e-mail address is displayed, over several lines if necessary (maximum 60 lines).

Back Press the display key to return to the incoming message list.

Example:

Deleting e-mail messages

Prerequisite: you have opened the incoming e-mail list (→ [page 107](#)) or the header or sender's address for an e-mail is displayed (→ [page 109](#)):

Options → **Delete**
Select and press **OK**.

Yes Press the display key to confirm the security prompt.

The e-mail is deleted from the POP3 server.

Info Center – continuous Internet access from your phone

Data protection notice

The information services enable you to use a Gigaset telephone to call up selected information, such as weather forecasts.

The inventory data corresponds to that of the VoIP service.

When you use the service for the first time, a standard profile is created with configuration data for the device. You can then change and store the configuration data specific to your device, for example, the city for the weather forecast or the date of birth for the biorhythm. You can delete this configuration data again at any time.

The information services use the HTTP protocol.

Further information about the Gigaset.net service data saved can be found at www.gigaset.net/privacy-policy

You can use your phone to retrieve online content from the Internet i.e., request info services that are provided specifically for the telephone. The info services available are constantly updated. A default selection has already been made.

Information on the gigaset.net info services is available on the Internet at:

www.gigaset.com/nextg/apps

Please note

You can launch the Info Center and display info services with every registered Gigaset C610H, SL78H, SL400H and S810H handset.

Customising info services

You can change the default setting for the Info Center (standard profile) and add new services. Visit the Gigaset.net page www.gigaset.net on the Internet and compile your personal info services.

- ▶ Open the Web configurator page on the PC **Settings → Info Services** (→ **page 196**).
- ▶ Click the link gigaset.net/myaccount.

You are automatically logged in with the username and password that have been assigned to your phone by default.

Or:

- ▶ Enter the following address in the address field of your PC's Web browser: www.gigaset.net
- ▶ Enter your Gigaset.net user ID and password on the Gigaset.net page. You will find your user ID and password on the Web configurator page specified above.

In both cases, your Gigaset.net web page is displayed, where you can customise info services for your Info Center ("Info Center" tab) and the info services for the **Info Services** screensaver ("Screensaver" tab).

The "Info Center" tab has an icon for every info service provided by Gigaset.net (e.g., weather, horoscope), and an icon for personal applications that you want to add to your Info Center.

Activating/deactivating a service

An info service is displayed on your Gigaset phone if the relevant icon is orange and the option at the top right of the icon is activated.

(Example):

- 1 Icon of an activated info service (orange). The info service is displayed in the Info Center on your Gigaset phone.
 - 2 Icon of a deactivated info service (grey). The info service is not displayed on your phone.
 - 3 Option to activate or deactivate the info service.
- ▶ Click the option for an icon to activate/deactivate the corresponding info service (☑ = activated).

All activated info services are provided in the display of the registered handset when you open the Info Center.

Customising info services

For some info services you can customise the information that you want from your Gigaset phone yourself.

- ▶ Click the icon that belongs to an info service (e.g., weather). This will open another Web page where you can customise the RSS feeds.

The Web pages for the individual info services describe which settings you can make.

Example "weather information"

- ▶ Click the icon for the weather information. This will open a Web page to configure the weather information for your Info Center.

The world weather is already set.

You can also set up to nine other locations (worldwide) that you can request weather information for.

- ▶ Enter the name of the location that you want to access weather information for in the editable field.
- ▶ Click the magnifying glass icon .

This will list the locations that start with the specified name.

- ▶ Click the list icon to open the list and select the required location.
- ▶ Right-click the arrow icon  to add this location to your Info Center.

The Web page lists all the locations for which the Info Center provides weather information.

- ▶ If a location is deleted from the list, click the trash icon  after the location name.
- ▶ Click the disk icon  at the top right of the Web page to save your settings.

Please note

You can also configure weather information on the handset itself.

- ▶ Start the Info Center on your handset (→ [page 115](#)).
- ▶ Select the entry for the weather information and press the display key **OK**.
- ▶ Select the entry "Add location" and press **OK**.
- ▶ Specify which location you want the weather information to be displayed for and press **OK**. This will show a list of locations with the name specified.
- ▶ Select the required location and press **OK**.
- ▶ Press OK again to confirm your selection.

Configuring your own applications/info services

In addition to the info services provided by Gigaset.net Service, you can also enter up to ten extra info services (applications, apps). You can enter URLs for info services from different providers or develop your own applications. Specifications and examples that can help you to create your own applications are available on the Gigaset.net page www.gigaset.com/nextg/appstoolkit

- ▶ Click the "My applications" icon.
- ▶ Enter a name for the additional service in the field on the left. This name will subsequently appear on the handset.
- ▶ Enter the URL for the additional service or your application in the field on the right and click the  icon on the right next to this field to add this info service.
- ▶ Repeat the procedure to add any other info services.

The Web page lists all personal info services and applications that have been configured.

- ▶ To delete a service from the list, click the trash icon  after the service.
- ▶ Click the disk icon  at the top right of the Web page to save your settings.
- ▶ Click the icon's option for your own applications to activate them. A separate entry for "My applications" will then appear under the Info Center on your Gigaset. Your own services and applications that you have configured will then be shown under this entry.

Starting the Info Center, selecting info services

 → ★ **Additional Features** → **Info Centre**

Your Info Center menu i.e., a list of available info services is displayed. You can navigate between the info services.

 Select the info service and press **OK**.

To access certain info services (personalised services), you have to log in with a user name and password. In this case, enter your access data as described in the "**Login for personalised info services**" section on **page 116**.

Messages when loading requested information

The information is loaded from the Internet. Wait a few seconds until the information is displayed. The display shows **Please wait....**

If the information for an info service cannot be displayed, one of the following messages appears:

Requested page can't be reached.

Possible causes of this are:

- ◆ Time limit exceeded (timeout) when loading the information
- ◆ The Internet server for the info services cannot be accessed.
- ▶ Check your Internet connection and repeat the request at a later date.

Coding error on requested page

The content of the requested info service is coded in a format that the handset cannot display.

Can't display requested page

General error when loading the info service.

Login failed.

Login has failed. Possible causes of this are:

- ◆ You have not entered your login data correctly.
 - ▶ Reselect the info service and repeat the login process. Please remember that data is case sensitive.
- ◆ You are not entitled to access this info service.

Login for personalised info services

If a special login process with user name and password is required to access an info service, the following is displayed after the service has been called up:

Authent. Name

Enter the user name supplied by the provider of the info service.

Save

Press the display key.

Password

Enter the password associated with this user name.

Save

Press the display key.

If login was successful, the requested info service is displayed.

If login failed, a message to this effect appears on the display → [Messages when loading requested information, page 115](#).

Please note

Please remember that login data is case sensitive. For instructions on entering text, → [page 216](#).

Operating the Info Center

Depending on the type of info service requested, you can perform the following operations:

Scrolling within an info service

- ▶ You can use  to scroll downwards within an info service, and  to scroll up (back).

Skipping back to the previous page

- ▶ Press the left display key.

Skipping back to the Info Center menu

- ▶ Briefly press the end call key .

You want to go offline:

Press and **hold** the end call key , the handset returns to idle status.

Selecting a hyperlink

Hyperlink to further information:

If the page contains a hyperlink to further information, this is indicated by the  icon.

If a page with hyperlinks is opened, the first hyperlink is highlighted.

- ▶ Using the control keys ( and/or ) as required, you can navigate to the hyperlink that you would like to select. The hyperlink is then highlighted by bars.
- ▶ Press the right display key  to open the relevant page.

Hyperlink to a phone number:

If a hyperlink contains a phone number, you can copy the number to the local directory or call the number directly (Click-2-Call functionality).

- ▶ Select the hyperlink using the  and/or  keys, as required.
- ▶ You can identify a hyperlink of this type by the fact that  is shown above the right display key.
- ▶ Press the display key  to copy the phone number to the local directory on your handset.

Or:

- ▶ Press  to call the stored number.

Depending on the provider, if you press **Call**,

- ◆ The number is dialled directly
- ◆ The number appears first in the display, in which case you must first confirm the number before it is dialled.
 - ▶ If you press **Yes**, the number is dialled.

Or:

- ▶ If you press **No**, the page is displayed again with the hyperlink. The number will **not** be dialled.

Entering text

- ▶ If necessary, use  to navigate to the line containing the field into which you want to enter text. The cursor flashes in the text field.
- ▶ Enter the text using the keys on your handset (→ [page 216](#)).
- ▶ If necessary, navigate to other text fields to complete them or make a selection (see below).
- ▶ Press the right display key to complete the entry and send the data.

Making selections

- ▶ If necessary, use  to navigate to the line in which you would like to make a selection.
- ▶ Press left or right on the control key several times to make the required selection.
- ▶ Use  to navigate to other selection fields and make your selection as described above.
- ▶ Press the left display key to complete the selection and send the data.

Setting options

- ▶ Use  to navigate to the line containing the option. The line is highlighted.
- ▶ Activate or deactivate the option via the control key  (press right) or the left display key (e.g., **OK**).
- ▶ If necessary, navigate to other options or text fields to set or complete them.
- ▶ Press the left display key (e.g., **Send**) to complete the entry and send the data.

Accessing info services using quick dial

Each info service that is provided via Gigaset.net is assigned a quick dial that you can use to access the service. The table below contains examples.

Info service ¹	Quick dial ²
News	1#92
Weather	2#92
My eBay	3#92
Encyclopaedia	4#92
Translator	5#92
Unit converter	6#92
Horoscope	7#92
Biorhythm	8#92
My friends	9#92
Gigatweet	10#92
My applications (personal info services/applications that you have defined)	99#92

- 1 The list of info services is one example. Each info service is provider-dependent.
- 2 The numbers 11 to 98 are reserved for additional info services/applications that you are provided with in the future via Gigaset.net.

When the handset is in idle status:

Enter the quick dial for a service and press the talk key.

The Info Center page with this service/application is loaded and shown on the display.

Please note

If you enter the quick dial for an info service into the local directory and you assign this directory entry to a digit key on your handset (→ [page 150](#)), simply pressing and holding this digit key will show the relevant page of the Info Center on the display.

Displaying information from the Internet as a screensaver

You can configure your handset to display one of the info services from the Info Center (e.g., weather reports, newsfeeds) in the device's idle display.

To do this, you must switch on the **Info Services** (→ [page 153](#)) screensaver on your handset and activate the display of info services via the Web configurator (→ [page 196](#)).

The text information appears on the display approximately ten seconds after the handset returns to idle status.

Depending on the information feed selected, a display key appears on the right of the screensaver.

- ▶ Press the right display key to call up further information.
- ▶ Press and **hold** the end call key  to return to idle status.

Selecting information for the screensaver

The default setting for the **Info Services** screensaver is the weather forecast. You can change this setting:

- ◆ On the PC using your account on the Gigaset.net server (→ [page 112](#))
- ◆ On the handset using the Info Center (see below)

When the handset is in idle status:

 → ★ **Additional Features** → **Info Centre**

The menu for your Info Center appears.

-  Select **Screensaver** and press **OK**.
-  Select the information service for the **Info Services** screensaver.
-   Scroll to the next line, if necessary, and make further settings for the information service selected.
- Save** Press the display key.

Operating the Gigaset C610A IP base answering machine

You can operate the answering machines that are integrated in the base via a registered handset or via remote operation (other phone/mobile phone). You can only record your own announcement message or advisory message via a handset.

The base has three answering machines (AM1, AM2, AM3) that can be activated and used independently of each other.

Once the phone has been set up, AM1 is activated and all base connections (lines) are assigned to it as receive connections.

AM2 and AM3 are available once you have assigned at least one receive connection to them.

Each answering machine only receives calls that are directed to its receive connections. Each answering machine can only be operated via the handsets to which at least one of the machine's receive connections is assigned.

Assigning receive connections

Prerequisite: at least two connections have been configured on your base.

 →  **Settings** → **Telephony** → **Rec. Connections**

Answer Machine 1/2/3

Select and press **OK**.

- ▶ You can enter data in the following fields:

An entry **Receive calls for xxx** (xxx = name of the connection) is displayed for each base connection.

Make the following setting for every configured phone connection.

- ▶ Select  **Yes** if the answering machine should accept calls made on the connection in question.

Select **No**, if the receive connection should not be assigned to this answering machine.

If the connection is already assigned to another answering machine as a receive connection, you cannot select **Yes**. You have to cancel the old assignment first.

Parallel calls

If a caller is connected to an answering machine and a second call comes in for this answering machine, the second caller will hear the dialling tone. The call is signalled to the handsets to which the receive connection is assigned.

If the second call is not accepted, the answering machine will accept this call if:

- ◆ The connection with the first caller has ended and
- ◆ The set time period for the answering machine to answer a call (→ [page 129](#)) has expired.

Answering machine mode

You can use two different modes for each of the three answering machines.

- ◆ In **Answer & record** mode, the caller hears the announcement and can then leave a message.
- ◆ In **Answer only** mode, the caller hears your announcement but cannot leave a message.

Operation via the handset

The speaker activates **automatically** if you receive an acoustic prompt or message while operating. You can switch it off with the speaker key .

Activating/deactivating the answering machine and setting answering machine mode

You can choose between **Answer & record**, **Answer only** and **Alternating**. By using the **Alternating** setting, you can activate answer and record mode for a set period of time; outside this period the caller will only hear the announcement.

 →  → **Activation**

If more than one answering machine shares a receive connection with the handset, a list of these answering machines is displayed. Activated answering machines are marked with ✓.

 If necessary, select answering machine.

Change Press the display key.

▶ You can enter data in the following fields:

Activation:

Select **On** or **Off** to activate/deactivate the answering machine.

Mode:

Select **Answer & record**, **Answer only** or **Alternating**.

If **Alternating** mode is selected:

Record from:

Enter hours/minutes for the start of the period in 4-digit format.
(The time **must** be set.)

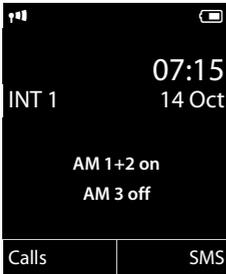

Record until:

Enter hours/minutes for the end of the period in 4-digit format.

Save Press the display key.

When you switch the answering machine on, the remaining memory time is announced. If the time has not yet been set, a corresponding announcement is made (set time → [page 161](#)).

A status message is shown in the handset's idle display for every answering machine that is assigned a receive connection (example):

If the message memory is full and **Answer & record** or **Alternating** mode has been selected, you will first be asked to delete old messages. The answering machine is activated as soon as you have deleted old messages.

If there is no time available, the answering machine changes from **Alternating** mode to **Answer & record** mode until the time is available again.

Recording announcements / advisory messages

The phone is supplied with pre-recorded announcements for answer and record mode and for answer only mode. If a personal announcement has not been recorded, the relevant pre-recorded announcement is used.

You can record your own personal announcement for answer and record mode and answer only mode for each answering machine.

Please note

A registered handset can only manage answering machines that have at least one common receive connection with the handset.

 →  → **Announcements** → **Rec. Announcement / Rec. Advisory Msg.**

 If several answering machines are assigned to the handset, select the answering machine and press **OK**.

OK Press the display key to start the recording.

The speaker mode is activated.

You hear the ready tone (short tone).

▶ Now speak your announcement (at least 3 secs.).

Just as if making a call via the receiver, place the telephone against your ear and speak into the microphone at a normal volume.

End Press the display key to end the recording.

Use  or **Back** to cancel recording and **OK** to restart the recording process.

After recording, the announcement is played back for you to check. You can re-record the announcement with **New**.

Please note:

- ◆ Recording ends automatically if the maximum recording time of 170 seconds is exceeded or there is a break in speech for more than 2 seconds.
- ◆ If you cancel the recording, the default announcement is used.
- ◆ The recording is not started or cancelled if the answering machine memory is full.
 - ▶ Delete old messages and the answering machine will automatically switch back to **Answer & record** mode.
 - ▶ Repeat recording if required.

Listening to announcements/ advisory messages

 →  → **Announcements** → **Play Announcement / Play Advisory Msg.**

 If several answering machines are assigned to the handset, select the answering machine and press **OK**.

If you have not recorded a personal announcement, the relevant pre-recorded announcement is played.

You can cancel playback by pressing  or **Back**.

Record a new announcement while playing the announcement:

New Press the display key.

If the answering machine's memory is full, it will switch to **Answer only** mode.

- ▶ Delete old messages and the answering machine will automatically switch back to **Answer & record** mode. Repeat recording if required.

Deleting announcements/advisory messages

 →  → **Announcements** → **Del. Announcement / Del. Advisory Msg.**

 If several answering machines are assigned to the handset, select the answering machine and press **OK**.

Yes Press the display key to confirm the prompt.

Once you have deleted your announcement for the specified answering machine, the relevant pre-recorded announcement is used again.

Playing back messages

The date and time of each message is logged (provided this has been set,

→ [page 161](#)) and displayed during the playback. If Calling Line Identification is activated, the caller's number is displayed. If the caller's number is saved in the directory, their name is displayed. For more information about the display → [page 55](#).

Playing new messages

New messages that have not yet been played back are indicated by the  icon in the display and by the  key flashing. The number of new messages is displayed.

Example:

Press the message key.

Answer Mach. 1 / Answer Mach. 2 / Answer Mach. 3

Select an answering machine from the list, if necessary, and press .

Or:

→  → Play Messages

If several answering machines are assigned to the handset, select the answering machine and press .

Only local answering machines that share a receive connection with the handset are assigned to the handset.

The speaker on the handset is activated.

If there are new messages, playback then begins with the first new message. After the last new message, you will hear the end tone and an announcement stating how much recording time remains.

If the message has been saved with the date and time, you will hear an appropriate announcement before playback begins.

All stored messages are played back regardless of the associated receive connection.

During playback, the entries in the answering machine list are shown on the display.

After the entry time and date have been played back (after approx. 3 seconds), a new message assumes the status "old".

Playing old messages

If there are no more new messages, you can start playing older messages as described in "[Playing new messages](#)" on [page 125](#).

Stopping and controlling playback

During message playback:

 /  Stop playback. Press  /  again to resume or

Options Press the display key.
Select **Pause** to stop and **Continue** to continue and press **OK**.

 Stop playback and call back a caller.

 or 

During time stamp playback: Skip to previous message.
During message playback: Skip to the start of the current message.

During time stamp playback: Skip to previous message.
During message playback: Repeat the last five seconds of the current message.

 or 

Go to the next message.

If playback is interrupted for over a minute, the answering machine returns to idle status.

Marking a message as "new"

A previously played back "old" message is displayed as a "new" message again.

During message playback or pause:

 Press the star key.

Or:

Options Open menu.

Mark as New

Select and press **OK**.

An announcement informs you of the message's new status.

Playback of the current message is cancelled. Playback of next message starts, if applicable.

The  key on the handset flashes.

Copying the phone number from a message to the directory

During playback or pause:

Options → **Copy to Directory**

▶ Complete the entry (→ [page 78](#)).

Deleting messages

You can either delete all old messages together or individually.

Deleting all old messages

During playback or pause:

Options → **Delete Old List** **OK**

Yes Press the display key to confirm the prompt.

Deleting an individual message

During playback or pause:

Delete / **0 +**

Press the display key or the **0 +** digit key.

You can only delete new messages once the time stamp has been played back along with the first few seconds of the message.

Accepting a call from the answering machine

You can pick up a call while the answering machine is recording or is being operated via remote operation:

 /  / **Accept**

Press the talk, speaker or display key.

Recording stops and you can speak to the caller.

If three seconds of the message have already been recorded when you accept the call, the message is saved. The message key  on the handset flashes.

You can answer the call, even if it is not signalled.

Diverting an external call to the answering machine

You can divert an incoming external call to the answering machine.

It is only possible to divert a call, if:

- ◆ The call comes in on a receive connection that is assigned to one of the answering machines
- ◆ The answering machine to which the receive connection is assigned is activated and not engaged with another call
- ◆ There is sufficient memory available on the answering machine

Prerequisite: an external call is signalled on the handset

→ 00 Select display key.

The answering machine starts immediately in answer & record mode and records the call. The set time for ring delay (→ [page 129](#)) is ignored.

Activating/deactivating two-way record

You can record an **external** call with the answering machine.

Prerequisite:

You are conducting an external call:

- ▶ Inform the caller that the call is being recorded.

Options Open menu.

Two-way Record

Select and press **OK**.

Two-way record is indicated on the display by an advisory text and is added to the answering machine list as a new message.

End Press the display key to stop two-way record.

- ◆ If the connection used for the call is assigned to an answering machine as a receive connection, the call is recorded by this answering machine.
- ◆ If the connection is not assigned to an answering machine as a receive connection, the call is recorded by **Answ. Machine 1**.

If the answering machine that is supposed to record the call is busy with another call, the message **Currently not possible** is displayed. You hear the end tone.

The maximum recording time depends on the memory available on the answering machine. If the memory is full, you will hear an end tone, the recording is aborted, and the call recorded up to that point is listed in the answering machine list as a new message.

Please note

All persons using this device for recording telephone conversations shall comply with New Zealand law. This requires that at least one party to the conversation is to be aware that it is being recorded. In addition, the Principles enumerated in the Privacy Act 1993 shall be complied with in respect to the nature of the personal information collected, the purpose for its collection, how it is used and what is disclosed to any other party.

Activating/deactivating call screening

During recording of a message you can screen a call via the handset loudspeaker.

Permanently activating/deactivating call screening

 →  → Call Screening → Handset

Change Select display key to activate/deactivate the function (= on).

Call screening is activated or deactivated for all registered handsets.

Deactivating call screening for the current recording

You can deactivate the function during the recording.

Silence / 

Briefly press the display key or end call key.

Answering a call

  Press the speaker or talk key.

Setting the recording parameters

The answering machine has already been preset at the factory. You can configure individual settings via the handset.

 →  → Recordings

▶ You can enter data in the following fields:

Length:

Select a maximum recording time of **1 min.**, **2 min.**, **3 min.** or **Maximum**.

Quality:

Select **Excellent** or **Long Play** recording quality. If the quality is higher, the maximum recording time is reduced.

Ring Delay:

Select when the answering machine should accept a call:
Immediately, after **10 sec.**, **18 sec.**, **30 sec.** or **Automatic**.

Save

Press the display key.

Information about ring delay

In **Automatic** mode, the following applies for ring delay:

- ◆ If there are no new messages, the answering machine answers a call after 18 seconds.
- ◆ If new messages are present, the answering machine answers a call after 10 seconds.

When operating remotely (→ [page 130](#)), you can tell after approx. 15 seconds that there are no new messages (otherwise the answering machine would have already accepted your call). There are no call charges if you hang up now.

Please note:

You can configure your telephone so that the **first** ringtone is **suppressed** on all calls (→ [page 104](#)). This means that the time set for the ring delay predetermines how long the caller must wait before the answering machine accepts the call (not how long it rings).

Operating when on the move (remote operation)

You can check and activate your answering machine from any other telephone (hotel, pay phone etc.).

Prerequisites:

- ◆ You have set a system PIN other than 0000 (→ [page 162](#)).
- ◆ The phone you are using for remote operation has tone dialling (DTMF) i.e., you hear different tones when you press the keys. Alternatively, you can use a code transmitter (available from retailers).
- ◆ The connection via which you call is assigned to the answering machine as a receive connection.

Please note

Remote operation via VoIP connections is possible as long as DTMF signals are transmitted (depending on the provider) as SIP info messages, audible signals in the voice channel (inband or audio) or as special RTP data packets (pursuant to RFC2833).

Calling the answering machine and playing messages

Dial your own number.

When you hear your announcement: press **9**.
The announcement is aborted.

Enter system PIN.

You are informed whether any new messages have been recorded. The messages are now played back. You can now operate the answering machine with the keypad.

You use the following keys:

- 1** During time stamp playback: Skip to previous message.
During message playback: Skip to the start of the current message.
- 2** Stop playback. Press again to resume.
After a pause of approx. 60 seconds, the connection is ended.
- 3** Go to the next message.
- 4** Repeat the last five seconds of the message.
- 0** During message playback: delete current message.
- *** Change the status of a previously played back message to "new".
The next message starts to play. The remaining memory is announced at the end of the last message.

cancelling remote operation

- ▶ Press the end call key or replace the earpiece.

Please note

The answering machine will terminate the connection under the following circumstances:

- ◆ An incorrect system PIN has been entered.
- ◆ There are no messages in the answering machine.
- ◆ After the remaining memory has been specified.

Activating the answering machine

- ▶ Phone home and let the phone ring until you hear: "Please enter PIN" (approx. 50 seconds).

Enter system PIN.

Your answering machine is activated. It tells you how much memory is left.

The messages are played.

The answering machine cannot be deactivated remotely.

If you enter an incorrect PIN or input is taking too long (more than ten seconds), the connection is ended. The answering machine will remain deactivated.

Using the network mailbox

Some providers offer answering machines on the network – network mailboxes. Each network mailbox accepts incoming calls made via the corresponding line (fixed line or corresponding VoIP phone number). To record all calls, you should therefore set up network mailboxes for both the fixed line and for each of your VoIP connections.

You need to have **requested** the network mailbox for your fixed line connection from your network provider. You can store the number of the network mailbox for the fixed line in the phone.

You can activate/deactivate the network mailboxes for your VoIP connections using the handset or the Web configurator. To do this, you only require the phone number of the network mailbox.

Activating/deactivating the network mailbox, entering numbers

On the handset, you can manage the network mailboxes that are assigned to one of its receive connections.

 →  **Voice Mail** → **Network Mailboxes**

The list of connections (VoIP and fixed line) that are assigned to the handset as receive connections is displayed. **Net AM: xxx** where xxx is replaced by the standard name in the connection (**Net AM: IP1** to **Net AM: IP6**, **Net AM: Fixed Line**).

 If several receive connections are assigned to the handset, select connection and press **OK**.

You have selected a VoIP connection:

▶ You can enter data in the following fields:

Status

Select **On** to activate the network mailbox. Select **Off** to deactivate.

Network Mailbox

The number that is currently stored for the network mailbox is displayed.

Enter or change the phone number for the network mailbox if necessary.

With some VoIP providers your network mailbox phone number is downloaded together with the general VoIP provider data, saved to your base and displayed under **Network Mailbox**.

▶ Press the display key **Save**.

You have selected the fixed line/connection:

Enter or change the phone number for the network mailbox if necessary.

Save Press the display key.

You cannot activate/deactivate the network mailbox for the fixed line connection via the handset. For instructions on activating/deactivating the network mailbox, see the information provided by the network provider.

Configuring a answering machine for quick dial

You can use quick dial to make direct calls to a network mailbox or the integrated answering machine on the phone.

Assigning key 1, changing assignment

Quick dial settings are device-specific. You can assign a different answering machine to key  on each registered handset.

No answering machine is preconfigured for quick dial in the default settings.

 Press and **hold** key .

Or:

 →  **Voice Mail** → **Set Key 1**

The list of VoIP connections and the fixed line connection assigned to the handset as receive connections is displayed. **Net AM: xxx** where xxx is replaced by the standard name in the connection (**Net AM: IP1** to **Net AM: IP6**, **Net AM: Fixed Line**).

On the Gigaset C610A IP: this list contains the entry **Answ. Machine** for the local phone answering machines.

 Select entry and press **Select** ( = on).

You have selected the local answering machine:

Quick dial is immediately activated for the local answering machines on the phone.

 Press and **hold** the end call key (idle status).

You have selected a network mailbox:

If a number is already stored for this network mailbox, quick dial is activated immediately.

 Press and **hold** the end call key (idle status).

If no number is saved for the network mailbox, you are asked to enter the number of the network mailbox.

 Jump to the **Network Mailbox** line.

 Enter the number for the network mailbox.

 **Save** Press the display key.

 Press and **hold** the end call key (idle status).

Quick dial is activated.

Please note

You can only assign quick dial to **one** answering machine.

You can also call the network mailboxes for the handset's receive connections directly via the message key (→ [page 135](#)).

Calling the answering machine via quick dial

Press and **hold**.

If you have set a network mailbox for quick dial you are connected directly to this network mailbox.

If necessary, press the speaker key.

You hear the network mailbox announcement.

Gigaset C610A IP: if you have set quick dial for the local answering machine on the phone, message playback starts only if one answering machine is assigned a receive connection for the phone. If multiple local answering machines are assigned to the phone, then a list of answering machines will appear.

Select answering machine and press **OK**.

Displaying new messages in the handset's idle display

If a new message is present on one of the network mailboxes that is assigned to the handset via its receive connection, or on the local answering machine, the symbol  and the number of new messages are displayed in idle status.

The  message key flashes.

Calling the network mailbox using the message key

Under the message key  you will find a list for each network mailbox that fulfils the following prerequisites:

- ◆ The corresponding connections are assigned to the handset as receive connections.
- ◆ The network mailbox phone number is saved on the phone.

You can use the list to call the network mailbox directly and listen to the messages.

 Press the message key.

The following is displayed (example):

Messages & Calls	
Net AM: Fixed Line (1)	1
Mailbox IP 1: (1)	2
Mailbox IP 2:	3
Mailbox IP 3:	4
Mailbox IP 4:	
Back	OK

- 1 **Net AM: Fixed Line** The network mailbox for the fixed line connection
- 2 If there are new messages in the network mailbox, the list entry is shown in bold. The number of new messages is shown in brackets following the list entry.
- 3 **Mailbox IP 1**, **Mailbox IP 2**: and so on are the network mailboxes for the VoIP connections. "IP1", "IP2" and so on are the standard names of the corresponding VoIP connections. The standard names are always displayed regardless of which connection name you specified during configuration.
- 4 If there are no new messages, no number is shown after the list entry for the network mailbox. The number of messages stored in the network mailbox is not displayed.

Net AM: Fixed Line / Mailbox IP 1: / Mailbox IP 2: / ... / Mailbox IP 6:

Select the network mailbox entry and press **OK**.

You are connected directly to the network mailbox and hear its announcement. Messages can generally be played back using your handset keypad (digit codes). Listen to the announcement.

Please note

- ◆ The network mailbox is automatically called via the corresponding connection. An automatic area code specific to your phone is **not** prefixed.
 - ◆ Network mailbox messages can generally be played back using your phone's keypad (digit codes). You need to define how the digit codes for VoIP should be converted to DTMF signals and transmitted (→ [page 194](#)).
- Ask your VoIP provider which type of DTMF transmission it supports.

ECO DECT

You are helping to protect the environment with your Gigaset.

Reduced energy consumption

Your telephone has a power-saving adapter plug and uses less power.

Reducing radiation

The radiation from your telephone is reduced **automatically**: the closer the handset is to the base, the lower the radiation.

You can reduce the radiation from the handset and the base even more by using Eco Mode:

Eco Mode

Reduces the radiation of the base and handset by 80% – whether you are making a call or not. **Eco Mode** reduces the range of the base by approx. 50%. Using **Eco Mode** always makes sense when a reduced range is sufficient.

Switching off radiation

◆ Eco Mode+

When you activate **Eco Mode+**, the radiation (DECT transmission power) of base and handset is switched off automatically in idle status. This is also true when multiple handsets are used, if the handsets support **Eco Mode+**.

Eco Mode/Eco Mode+ can be activated/deactivated independently of one another and can also be used with multiple handsets.

Activating/deactivating Eco Mode / Eco Mode+:

 →  **Settings** → **Eco Mode** → **Eco Mode / Eco Mode+**

Change Press the display key (☑ = on).

Status displays

Display icon	
  red	Reception strength: – Good to poor – No reception
 white	Eco Mode deactivated
 green	Eco Mode enabled
 white	Eco Mode+ enabled (displays instead of the reception strength icon when in idle status)
 green	Eco Mode and Eco Mode+ activated

Please note

- ◆ When using **Eco Mode+**, you can ensure that the range of the base is sufficient by **pressing and holding** the talk key . You hear the dial tone if the base can be reached.
- ◆ When **Eco Mode+** is enabled:
 - Call setup is delayed by approx. 2 seconds.
 - Handset standby time is reduced by approx. 50%.
- ◆ Registering handsets that do not support **Eco Mode+** causes the mode to be deactivated on the base and all other handsets.
- ◆ Activating **Eco Mode** reduces the range of the base.
- ◆ **Eco Mode/ Eco Mode+** and repeater support (→ [page 170](#)) cancel each other out, i.e., if you use a repeater, you cannot use **Eco Mode** and **Eco Mode+**.

Setting the alarm clock

Prerequisite: the date and time have already been set.

Activating/deactivating the alarm clock and setting the wake-up time

 →  → Alarm Clock

▶ You can enter data in the following fields:

Activation:

Select **On** or **Off**.

Time:

Enter the wake-up time in 4-digit format.

Volume:

Set the volume (1–6).

Melody:

Select the melody.

Save Press the display key.

The  icon and wake up time are shown in idle status.

A wake-up call is shown on the display (→ [page 4](#)) and signalled with the selected ringtone melody. The wake-up call sounds for 60 seconds. If no key is pressed, the wake-up call is repeated twice at five minute intervals and then switched off.

During a call, the wake-up call is only signalled by a short tone.

Deactivating the wake-up call/repeating after a pause (snooze mode)

Prerequisite: a wake-up call is sounding.

OFF Press the display key. The wake-up call is deactivated.

Or

Snooze Press the display key or any key. The wake-up call is deactivated and then repeated after 5 minutes. After the second repetition the wake-up call is deactivated completely.

Using a handset as a room monitor (Babyphone)

If the room monitor is activated, the phone number saved in the system is called as soon as a set noise level is reached. You can save an internal or external number in your handset as the destination number. All of the handset keys are deactivated except for the display keys.

The room monitor call to an external number is cancelled after approximately 90 seconds. The room monitor call to an internal number (handset) stops after approx. 3 minutes (depending on the base station). When the room monitor is activated, all keys are locked except the end call key. The handset's speaker can be switched on or off (**Two Way Talk = On or Off**). If **Two Way Talk** is switched on, you can answer the room monitor call.

When room monitor mode is activated, incoming calls to the handset are indicated **without a ringtone** and are only shown on the display. The display and keypad are not illuminated and advisory tones are also turned off.

If you accept an incoming call, the room monitor is suspended for the duration of the call, but the function **remains** activated.

If you deactivate then reactivate the handset, the room monitor remains activated.

Caution!

- ◆ **Always check the operation of the room monitor before use. For example, test its sensitivity. Check the connection if you are diverting the room monitor to an external number.**
- ◆ Activating the function significantly reduces the operating time of your handset. If necessary, place the handset in the charger. This ensures that the battery does not run down.
- ◆ Ideally the handset should be positioned 1 to 2 metres away from the baby. The microphone must be pointed towards the baby.
- ◆ The connection that the room monitor is diverted to must not be blocked by an activated answering machine.

Activating the room monitor and entering the destination number

☰ → ★ **Additional Features** → **Room Monitor**

▶ You can enter data in the following fields:

Activation:

Select **On** to activate.

Alarm to:

Select **Internal** or **External**.

External number: select the number from the directory (press display key **☰**) or enter it directly.

Internal number: press the display key **Change** → select the handset or **Call All** to call all registered handsets → **OK**.

In idle status, the destination number or the internal destination number is displayed.

Two Way Talk:

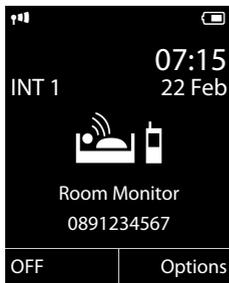

Switch the handset's speaker on or off (select **On** or **Off**).

Sensitivity:

Select the sensitivity of the sound level (select **Low** or **High**).

▶ Press **Save** to save the settings.

When the room monitor function is activated, the idle display looks like this:

Please note

A room monitor call to an external number is generally called via the send connection of the handset.

If the selection of the send connection for each call is assigned to the handset, the first activated IP connection in the configuration is automatically used. If there is no IP connection configured or activated, the fixed line connection is used..

Changing the destination number saved

 → ★ **Additional Features** → **Room Monitor**

- ▶ Enter and save number as described in "**Activating the room monitor and entering the destination number**" (→ [page 140](#)).

Cancelling/deactivating the room monitor

Press the end call key  to cancel the call when the **room monitor is activated**.

In **idle status**, press the display key **OFF** to deactivate room monitor mode.

Deactivating the room monitor remotely

Prerequisites:

- ◆ The telephone must support tone dialling
- ◆ The room monitor call is diverted to an external destination number.
- ◆ If room monitor is activated via a VoIP connection, the DTMF signalling must be done via SIP info or RFC2833 (→ [page 194](#)).

- ▶ Accept the call from the room monitor and press keys  .

The room monitor function will deactivate after the call ends. There are no further room monitor calls. The other room monitor settings on the handset (e.g., no ring-tone) remain activated until you press the display key **OFF** on the handset.

To reactivate the room monitor function with the same phone number:

- ▶ Reactivate and save with **Save** (→ [page 140](#)).

One Touch Call (toddler call)

You can set up your phone in such a way that pressing any key dials a previously stored number. This allows children, for example, who cannot enter a number, to call a certain number.

In One Touch Call mode, the phone is locked for all other calls (including **emergency calls**).

Activating One Touch Call mode

 → ★ **Additional Features** → **One Touch Call**

▶ Change multiple line input:

Activation:

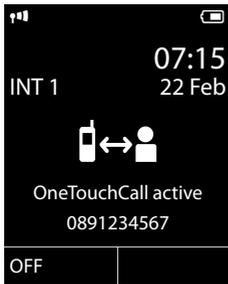

Select **On** to activate.

Call to:

Enter or change the number to be dialled by pressing any key..

▶ Press **Save** to save the settings.

When the function is activated, the idle display appears as shown below:

Making and ending a one touch call

▶ Press **any key** on the handset. The stored number is called via the send connection of the handset.

If the selection of send connection at each call is assigned to the handset, the first activated IP connection in the configuration is automatically used. If there is no IP connection configured or activated, the fixed line connection is used.

To end or to cancel the one touch call:

▶ Press the End key .

Deactivating the one touch call mode

In idle status:

▶ Press the display key **OFF**.

▶ Press **and hold** the hash key  to deactivate the one touch mode.

Connecting/using other handsets

You can register up to six handsets and six Gigaset repeaters to your base.

Each registered device is assigned an internal number (1 – 6) and an internal name (INT 1 – INT 6). You can change the number assignment and names.

If all internal numbers have already been assigned on your base, you must deregister a handset that is no longer required before registering a new one.

When you register a Gigaset handset, the base transfers entries for the following online directories to the local directory on the handset to enable you to use the online directories on your new handset as well.

Prerequisite: the handset can send and receive directory entries (see handset user guide).

- ◆ The online directory currently set (→ [page 196](#)) with a provider-specific name.
- ◆ The Yellow Pages currently set (→ [page 196](#)) with a provider-specific name.
- ◆ The private directory currently set with the name **Prv.NetDir**.
- ◆ The Gigaset.net directory with the name **Gigaset.net**.

Successful registration is therefore acknowledged with the message **Data Transfer x** entries received.

Registering handsets

You can register up to six handsets to your base.

A Gigaset C610H handset can be registered on up to four bases.

Manually registering Gigaset C610H to Gigaset C610/C610A IP

You must register the handset manually on both the handset (1) and the base (2).

Once registration is complete, the handset returns to idle status. The handset's internal number is shown in the display, e.g., **INT 1**. If not, repeat the procedure.

1) On the handset

The handset is not registered to a base.

Register Press the display key.

The handset is already registered to a base:

 →  **Settings** → **Registration** → **Register Handset**

If the handset is already registered to four bases:

 Select base, e.g., **Base 3** and press **OK**.

 Enter the system PIN for the base, if required, and press **OK**.

A message appears stating that the handset is searching for a base that is ready for registration.

2) On the base

Within 60 seconds, press and **hold** the register/paging key on the base (→ [page 5](#)) (for approx. 3 seconds).

Please note

All base connections are assigned to a handset as receive connections as soon as registration is complete.

The fixed line connection is assigned to the handset as a send connection.

You can change the assignment → [page 167](#).

Registering other handsets

You can register other Gigaset handsets and handsets for other devices with GAP functionality as follows.

1) On the handset

Start to register the handset as described in its user guide.

2) On the base

Press and **hold** the register/paging key on the base (→ [page 5](#)) (approx. 3 sec.).

Assigning the internal number

The base assigns the handset the lowest free internal number (possible numbers: 1–6). The internal number appears in the handset's display, e.g., INT 2. This means that the internal number 2 has been assigned to the handset.

De-registering handsets

You can de-register any other registered handset from any registered Gigaset C610H handset.

 →  **Settings** → **Registration** → **De-reg. Handset**

 Select the internal party you wish to de-register and press **OK**.
(The handset you are currently using is highlighted with <).

 If the system PIN is not 0000: enter the current system PIN and press **OK**.

 **Yes** Press the display key.

Searching for a handset, finding the phone's IP address ("Paging")

You can locate your handset using the base.

- ▶ **Briefly** press the register/paging key on the base (→ [page 5](#)).

All handsets will ring at the same time ("paging"), even if the ringtones are switched off.

The current (local) **IP address** for the base appears in the handset displays.

Ending paging

- ▶ **Briefly** press the registration/paging key on the base (→ [page 5](#)).

Or:

- ▶ Press the talk key  on the handset.

Or:

- ▶ Press the display key **Silence** on the handset.

Or:

- ▶ Do not press any key on the base or handset:
After approx. 30 seconds, the paging call will end **automatically**.

Please note

- ◆ An incoming external call will not interrupt the paging process.
- ◆ If there are already two internal connections between the handsets/to the answering machine (Gigaset C610A IP), then paging is not possible.
- ◆ A paging call is also signalled acoustically on handsets where the ringtone is permanently deactivated (→ [page 159](#)).

Changing the base

If your handset is registered to more than one base, you can set it to a particular base or to the base that has the best reception (**Best Base**).

 →  → **Registration** → **Select Base**

 Select one of the registered bases or select **Best Base** and press **Select**.

Making internal calls

Internal calls to other handsets registered on the same base are free.

Calling a specific handset

 Initiate internal call.

 Enter the number of the handset.

Or:

 Initiate internal call.

 Select handset.

 Press the talk key.

You hear the busy tone if:

- ◆ There are already two internal connections.
- ◆ The handset being called is not available (deactivated, outside range).
- ◆ The internal call is not accepted within three minutes.

Calling all handsets ("group call")

 Press **briefly** to initiate an internal call.

 Press the star key.

Or

 Press **briefly** to initiate an internal call.

Call All Select

 Press the talk key.

Or

 Press and **hold**.

All handsets are called.

Ending a call

 Press the end call key.

Transferring a call to another handset

You can transfer (connect) an external call to another handset.

You are conducting an **external** call:

-  Open the list of handsets.
The external party hears music on hold, if activated (→ [page 163](#)).
-  Select a handset or **Call All** and press **OK**.

When the internal party answers:

- ▶ If necessary, announce the external call.

-  Press the end call key.

The external call is transferred to the other handset.

If the internal party does **not** answer or the line is busy, press the display key **End** to return to the external call.

When transferring a call, you can also press the end call key  before the internal party answers.

If the internal party does not answer or the line is busy, the call will automatically return to you.

Initiating an internal consultation call/conference

When you are conducting an **external** call, you can call an **internal** participant at the same time for consultation or hold a conference call between all 3 participants.

You are conducting an **external** call:

-  Open the list of handsets.
The external party hears music on hold, if activated (→ [page 163](#)).
-  Select handset and press **OK**.
You are connected to the internal participant.

Either:

Options → **End Active Call**

You are reconnected with the external participant.

Or:

Conference Press the display key.

All three participants are connected with each other.

If the internal participant does not answer:

- ▶ Press the display key **End** to return to the first external caller.

Ending a conference call

-  Press the end call key.

If an **internal** participant presses the end call key , the other handset remains connected to the external participant.

External call waiting during an internal call

If you receive an **external** call during an **internal** call, you will hear the call waiting tone (short tone). The caller's number appears in the display if Calling Line Identification is enabled.

You have the following options:

Rejecting the external call

Reject Press the display key.

The call waiting tone is turned off. You remain connected with the internal participant.

For calls to a VoIP connection: the external caller hears the busy tone.

For calls to the fixed line connection:

The call continues to be signalled on the registered handsets.

Accepting an external call/Putting an internal party on hold

Accept Press the display key.

You are connected to the external caller. The internal call is placed on **hold**.

You have the following options:

- ◆ Swap between both participants:
 - ▶ Use  to swap between the participants.
- ◆ Speak to both participants at the same time:
 - ▶ Press the display key **Conf.** to establish the conference call. Press the display key **EndConf** to return to call swap mode.

Ending an internal call

 Press the end call key.

The external call is signalled as an incoming call. You can accept the call ([→ page 54](#)).

Internal call waiting during an internal/external call

If an internal party attempts to call you while you are involved in an external or external call, this call is shown on the display (internal call waiting). You can either accept or reject this call.

Press any key to make this prompt disappear from the display.

You must end the current call to accept the internal call. Then the internal call is signalled as per usual. You can accept the call.

Changing the name of an internal party

The names "INT 1", "INT 2" etc. are assigned automatically on registration. You can change these names. The name must be no more than 10 characters. The changed name is displayed in every handset's list.

Open the list of handsets. Your own handset is indicated by ◀.

Select handset.

Options

Open menu.

Rename

Enter the name.

Save

Press the display key.

Changing the internal number of an internal party

A handset is **automatically** assigned the lowest free internal number from 1–6 during registration. If all numbers are in use, then the number 6 is overwritten as long as this handset is in idle status. You can change the internal numbers of all registered handsets (1–6).

Open the list of handsets. Your own handset is indicated by ◀.

Options

Open menu.

Assign Handset No.

Select and press **OK**.

Select the handset, if necessary.

Select or enter the internal number.

Switch to another handset, if necessary, and select the number etc.

Save

Press the display key to save the entry.

You will hear the error tone if an internal number has been assigned twice.

- ▶ Repeat the procedure with a free number.

Setting the handset

Your handset comes with default settings, but you can change the settings to suit your individual requirements.

Accessing functions and numbers quickly

You can assign one **number from the directory** to each of the **digit keys**  and  to .

The left and right **display keys** have a default **function**. You can change the assignment (→ [page 151](#)).

The number is then dialled or the function started by simply pressing a key.

Assigning digit keys (quick dial)

Prerequisite: you have not yet assigned a number to the digit key.

- ▶ Press and **hold** the digit key

Or

Press the digit key **briefly** and press the display key **Quick Dial**.

The directory is opened.

Select an entry and press **OK**.

If the entry contains several numbers, the icons for the numbers stored are displayed:  /  / .

Select a number and press **OK**.

The entry is saved to the corresponding digit key.

Please note

If you delete or edit the entry in the directory at a later date, this will not affect the assignment to the number key.

Dialling a number

Prerequisite: the digit key already has a number assigned to it.

When the handset is in idle status

- ▶ Press and **hold** the digit key to dial the number.

Or

- ▶ **Briefly** press the digit key.

Press the left-hand display key with the number/name (abbreviated if necessary) to dial the number.

Changing number key assignments

Prerequisite: the digit key already has a number assigned to it.

When the handset is in idle status

- ▶ **Briefly** press the digit key
- ▶ Press the display key **Change**. The directory is opened.

Either:

- ▶ Select an entry and press **OK**. Select the number if necessary and press **OK**.

Or:

- ▶ Press the display key **Clear Key** to delete the assignment.

Assigning display keys, changing assignments

- ▶ Press and **hold** the left or right the display key. The list of possible key assignments is opened.
- ▶ Select a function and press **OK**.

The following functions are available:

Room Monitor

Assign the menu for setting and activating the room monitor to a key
(→ [page 140](#)).

 → ★ **Additional Features** → **Room Monitor**

Alarm Clock

Assign menu for setting and activating the alarm clock to a key (→ [page 138](#)):

 → ★ **Additional Features** → **Alarm Clock**

Withhold Number

Withhold Calling Line Identification for the next call (→ [page 65](#)).

E-mail

Opens the e-mail submenu for receiving and reading e-mail notifications
(→ [page 107](#)):

 → ✉ **Messaging** → **E-mail**

Redial

The key opens the redial list.

Services

The key opens a particular directory where you can save special services from your provider, e.g., the number for information or the hotline.

Setting the handset

More Functions...

More features are available:

◆ Send Connection

Assign an alternative send connection to a key.

- ▶ Select a connection as a (further) send connection for the handset from the list of connections and press **OK**.

Press this display key if the alternative send connection should be used (temporarily) for the subsequent call (instead of the send connection for the handset).

◆ Line Selection

Assign the list of connections for your phone to a key.

Select the send connection for each call from the list (→ [page 52](#)).

◆ Call Lists

Assign the call lists menu to a key (→ [page 69](#)).

 →  **Call Lists**

◆ Withhold Number (VoIP only)

Withhold Calling Line Identification for the next call (→ [page 65](#)).

◆ Call Divert

Assign menu for setting and activating/deactivating call divert to a key (→ [page 61](#)):

Prerequisite: the provider supports call divert.

 →  **Select Services** → **Call Divert**

◆ E-mail

Opens the e-mail submenu for receiving and reading e-mail notifications (→ [page 107](#)):

 →  **Messaging** → **E-mail**

Info Centre

Start Info Center and open the list of available information services – go online (→ [page 115](#)).

 → **Additional Features** → **Info Centre**

The selected function is displayed in the bottom display line above the display key (abbreviated if necessary).

Starting a function

With the telephone in idle status:

- ▶ Press the display key **briefly**.

The submenu opens and the function is performed.

Changing the display language

You can view the display texts in different languages.

 →  → **Language**

The current language is indicated by a .

 Select a language and press **Select**.

If you accidentally choose a language you do not understand:

 →  

Press keys in sequence.

 Select the correct language and press the **right display key**.

Setting the display

Setting the screensaver

You can display a screensaver when the handset is in idle status.

The following screensavers are available:

- ◆ One of the pre-loaded images
- ◆ The digital time (**Clock**)
- ◆ Information from an info service (**Info Services** – weather information, horoscope etc.). You must have activated the display of info services via the Web configurator.

The phone must be connected to the Internet to display info services.

The type of info service available to your phone is set on the Internet on the Gigaset.net server. You can change the setting (→ [page 120](#)).

If no information is currently available, the digital time (**Clock**) is displayed instead until information is available again.

Together with the information, display keys that open the Info Center selection menu can be shown.

The screensaver replaces the idle status display. This conceals the date, time and internal name.

The screensaver is not displayed in certain situations e.g., during a call and when a status message is displayed.

If a screensaver is activated, the **Screensaver** menu option is marked with ✓.

 →  → **Display** → **Screensaver**

The current setting is displayed.

▶ You can enter data in the following fields:

Activation:

Select **On** (screensaver is displayed) or **Off** (no screensaver).

Setting the handset

Selection:

Select screensaver or

 Press the display key. The active screensaver is displayed.

 Select screensaver and press **OK**.

Save Press the display key.

The screensaver is activated approx. 10 seconds after the display has changed to idle status.

If the screensaver conceals the display, **briefly** press  to show the idle display.

Activating/deactivating the info ticker

You can display text information from the Internet (weather information etc.) that is set for the screensaver **Info Services** as a scrolling message in the idle display. The scrolling message is shown in the bottom line of the idle display (immediately above the display keys). The end of one set of information and beginning of the next are separated by "+++".

 →  **Settings** → **Display** → **Info Ticker** (☑ = on)

The ticker starts as soon as the telephone changes to idle status. If, however, a message is shown in the idle display, the information ticker is not displayed.

Setting large font

You can increase the font size of print and icons in call lists and the directory to improve readability. Only one entry is shown at a time on the display, instead of several entries, and names are abbreviated if necessary.

 →  → **Display** → **Large Font**

Change Press the display key (☑ = on).

Setting the colour schemes

You can set the display to show a dark or a light background.

 →  → **Display** → **Colour Schemes**

Select **Colour Scheme 1** or **Colour Scheme 2** and press **OK**.

Setting the display backlight

Depending on whether or not the handset is in the charger, you can activate or deactivate the lighting. If it is activated, the display is permanently dimmed. If the display backlight is deactivated, you can reactivate it by pressing any key. The key has no further function in this situation.

 →  → **Display** → **Backlight**

The current setting is displayed.

▶ You can enter data in the following fields:

In Charger

Select **On** or **Off**.

Out of Charger

Select **On** or **Off**.

Please note

The **On** setting can significantly reduce the standby time of the handset.

Save

Press the display key.

Activating/deactivating auto answer

If this function is activated, you can simply lift the handset out of the charger without having to press the talk key  when you receive a call.

 →  → **Telephony** → **Auto Answer**

Change

Press the display key (= on).

Changing the speaker/earpiece volume

You can set the volume for speaker mode and earpiece mode to five different levels.

In idle status:

-  Open **Handset Volume** menu.
-  Set the earpiece volume.
-  Scroll to the **Speaker:** line.
-  Set the speaker volume.
- Save** Press the display key if necessary to save the setting permanently.

Setting the volume during a call:

-  Press the control key.
-  Select the volume.

The setting will automatically be saved after approximately 3 seconds or press the display key **Save**.

If  is assigned to another function, e.g., call swap (→ [page 66](#)):

Options Open menu.

Volume Select and press **OK**.

Configure the setting (see above).

Please note

You can also set the call volume using the menu (→ [page 49](#)).

Changing ringtones

Setting the volume

You can choose between five volumes (1–5; e.g., volume 3 = ) and the "crescendo" ringtone (6; volume increases with each ring = .

In idle status:

-  →  → **Audio Settings** → **Ringtones(Handset)** → **Volume**
-  Set the volume for internal calls and anniversaries.
-  Scroll to the next line.
-  Set the volume for external calls.
-  **Save** Press the display key to save the setting.

Setting a melody

You can select from a list of pre-loaded ringtones and melodies.

You can set different ringtones for the following functions:

- ◆ Internal Calls
- ◆ For external calls to each individual receive connection on the phone (**Landline, IP1 to IP6, Gigaset.net**).
- ◆ For all calls.

In idle status:

-  →  → **Audio Settings** → **Ringtones(Handset)** → **Melodies**
-  Select **Internal Calls** or a receive connection.
-  Select the melody for this connection.
-   Where necessary, select the next connection and set a melody etc.
-  **Save** Press the display key to save the setting.

Or:

You can set the ringtone melody so it is used for both internal and all external calls.

-  Select **All calls**.
-  Select melody.
-  **Save** Press the display key to save the setting.
-  **Yes** Press the display key to confirm the settings.

The setting for all calls will not work as soon as you change the setting for an individual connection.

Setting time-controlled signalling of external calls

You can specify a time period when you do not want the telephone to ring for an external call, e.g., during the night..

Precondition: Date and time are set.

 →  → **Audio Settings** → **Ringtones(Handset)** → **Time Control**

▶ Change multiple line input:

For external calls:

Select **On** or **Off**.

The following fields are only shown if **For external calls** is set to **On**.

Suspend ring. from:

Enter the start of the period in 4-digit format.

Suspend ring. until:

Enter the end of the period in 4-digit format.

▶ Press the **Save** display key.

Please note

During this period, you will continue to receive calls from numbers to which you have assigned a VIP group in the directory.

Activating/deactivating the ringtone for anonymous calls

You can set your handset not to ring if a caller withholds their number. The call will only be signalled on the display.

In idle status:

 →  → **Audio Settings** → **Ringtones(Handset)** → **Anon. Calls Silent**

Press **Change** to activate or deactivate the function. means that the ringtone is deactivated for anonymous calls.

Activating/deactivating the ringtone

You can deactivate the ringtone on your handset before you answer a call or when the handset is in idle status; the ringtone can be deactivated permanently or just for the current call. The ringtone cannot be re-activated while an external call is in progress.

Deactivating the ringtone permanently

 Press and **hold** the star key.

The  icon appears in the display.

Reactivating the ringtone

 Press and **hold** the star key.

Deactivating the ringtone for the current call

 Press the display key.

Activating/deactivating alert tones

In place of the ringtone, you can activate an alert tone. When you receive a call, you will hear a **short tone** ("Beep") instead of the ringtone.

 Press and **hold** the star key and **within 3 seconds**:

 Press the display key. A call will now be signalled by **one** short alert tone.

 is shown in the display.

Activating/deactivating advisory tones

Your handset uses advisory tones to tell you about different activities and statuses. You can activate/deactivate the following advisory tones independently of each other:

- ◆ **Key tone:** every key press is confirmed.
- ◆ **Confirmation tones:**
 - **Confirmation tone** (ascending tone sequence): at the end of an entry/setting and when an SMS or a new entry arrives in the answering machine list (Gigaset C610A IP) or call list
 - **Error tone** (descending tone sequence): when you make an incorrect entry
 - **Menu end tone:** when scrolling to the end of a menu
- ◆ **Battery:** the battery needs charging.

In idle status:

 →  → **Audio Settings** → **Advisory Tones**

▶ You can enter data in the following fields:

Key Tones:

Select **On** or **Off**.

Confirmation:

Select **On** or **Off**.

Battery:

Select **On** or **Off**.

Save Press the display key.

Please note

You can also set the call volume, the ringtones and the advisory tones via the menu (→ [page 49](#)).

Restoring the handset default settings

You can reset any individual settings and changes that you have made.

The following settings are **not** affected by a reset

- ◆ Registering the handset to the base
- ◆ Date/time
- ◆ Directory entries, the call lists, the SMS lists

 →  → **System** → **Reset Handset**

Yes Press the display key.

Configuring the system settings

You can make the following settings via the menu on the relevant handset or on a registered Gigaset SL78H, SL400H, S79H handset or via the Web configurator on the phone.

Setting the date and time manually

To ensure you have the correct time for incoming calls and to use the alarm clock, the date and time must be set.

Please note

The address of a time server on the Internet is stored on your phone. The date and time are taken from this time server provided that the phone is connected to the Internet and synchronisation with the time server is activated. Manual settings are overwritten in this case.

If the date and time have not yet been set on the handset, the **Time** display key appears.

Time Press the display key.

Or:

 →  **Settings** → **Date/Time**

- ▶ You can enter data in the following fields:

Date:

Enter day, month and year as an 8-digit number via the keypad,
e.g.,         for 14/01/2011.

Time:

Enter the hours and minutes in 4-digit format via the keypad,
e.g.,     for 07:15 am.

- ▶ Press the display key **Save** to save the settings.

Protecting against unauthorised access

Protect the phone system settings with a PIN known only to you. You have to enter the system PIN if you register or de-register a handset, change local network settings, perform a firmware update or reset the phone to default settings.

Changing the system PIN

You can change the phone's 4-digit system PIN (default setting: **0000**) to a 4-digit PIN known only by you.

Gigaset C610A IP: setting a system PIN enables remote operation of the answering machine (→ [page 130](#)).

 →  **Settings** → **System** → **System PIN**

Enter the current system PIN if necessary and press **OK**.

Enter new system PIN.

Press the display key.

Your own area code setting

Your area code (international and local area code) must be saved on the phone before you can transfer phone numbers (e.g., in vCards).

Some of these numbers are already preset.

 →  **Settings** → **Telephony** → **Area Codes**

Check that the (pre)set area code is correct.

▶ You can enter data in the following fields:

Select/change input field.

Navigate in the input field.

If necessary, delete number: press the display key.

Enter number.

Press the display key.

Example:

Area Codes	
International code:	00 - 61
Local area code:	0 - []
< C	Save

Activating/deactivating music on hold

 →  Settings → Audio Settings → Music on hold

Press **Change** to activate or deactivate the music on hold (= on).

Setting the base's IP address in LAN

Prerequisite: your base is connected to a router or a PC (→ [page 21](#)).

An IP address is required in order for the LAN to "recognise" your phone.

The IP address can be assigned to the phone automatically (by the router) or manually.

- ◆ If done **dynamically**, the router's DHCP server automatically assigns an IP address to the phone. The base's IP address can be changed according to router settings.
- ◆ For manual/**static** assignment, you assign a static IP address to the phone. This may be necessary depending on your network configuration (e.g., if your phone is connected directly to a PC).

Please note

To assign the IP address dynamically, the DHCP server on the router must be activated. Please also read the user guide for your router.

 →  Settings → System → Local Network

If the system PIN is not 0000: enter the system PIN and press **OK**.

- ▶ You can enter data in the following fields:

IP Address Type

Select **Static** or **Dynamic**.

For **IP Address Type Dynamic**:

The following fields show the current settings that the phone obtained from the router. These settings cannot be changed.

For **IP Address Type Static**:

You must manually define the IP address and the subnet mask for the phone as well as the standard gateway and DNS server in the following fields.

For **IP Address Type Static**:

IP Address

Enter the IP address that is to be assigned to the phone (overwriting the current settings).

The default is 192.168.1.2.

For information on the IP address, see the glossary (→ [page 222](#)).

Subnet Mask

Enter the subnet mask to be assigned to the phone (overwriting the current settings).

The default setting is 255.255.255.0

For information on the subnet mask, see the glossary (→ [page 226](#)).

Configuring the system settings

DNS Server

Enter the IP address for the preferred DNS server. The DNS server (Domain Name System, → [page 219](#)) converts the symbolic name of a server (DNS name) into the public IP address for the server when the connection is made.

You can specify your router's IP address here. The router forwards phone address requests to its DNS server.

The default is 192.168.1.1.

Default Gateway

Enter the IP address for the standard gateway (→ [page 221](#)) through which the local network is connected to the Internet. This is generally the local (private) IP address for your router (e.g., 192.168.1.1). Your phone requires this information to be able to access the Internet.

The default is 192.168.1.1.

- ▶ Press **Save** to save the settings.

Please note

You can also make local network settings via the Web configurator (→ [page 186](#)).

Configuring VoIP connections

Please note

If auto configuration is used to download the VoIP data to your phone (provider-specific, → [page 23](#)), the VoIP wizard is not available. In this case you cannot change the VoIP settings manually.

You can configure up to six VoIP connections on your telephone, i.e., you can assign up to six VoIP phone numbers to your phone.

You need to set up an IP account (VoIP account) with a VoIP provider for each connection. You must save the access data for this IP account on your phone. The VoIP wizard will help you to do this.

Starting the VoIP wizard:

 →  Settings → Telephony → VoIP Wizard

You will see the following in the display

The remaining procedure for the IP wizard is described on [page 24](#).

Each time you run the IP wizard you can configure/reconfigure **one** VoIP connection (IP account).

- ▶ Restart the IP wizard if you wish to configure/reconfigure another VoIP connection.

Please note

You can also use the Web configurator to configure and manage VoIP connections (→ [page 188](#)).

Automatic update for the VoIP provider settings

After the first download of the VoIP provider settings, your phone will check daily whether a newer version of the file for your VoIP provider is available from the Internet on the configuration server.

Auto configuration has been used to download VoIP settings

(→ [page 23](#))

If there is new configuration data, this is automatically downloaded to your phone (without notification).

Manual VoIP configuration with the VoIP wizard

If there is new provider data, the idle display on the handset displays the message **New profile available**.

Yes

Press the display key to confirm the prompt.

Enter the system PIN if necessary and press **OK**.

The new data for your VoIP provider will be downloaded and saved on the phone.

If you answer the prompt with **No**, the phone returns to idle status. Your telephone will not remind you of this new profile again. The message will only be shown again if a newer version of the provider data is available.

A profile update will only be started if no other profile or firmware update is taking place at the time.

Assigning send and receive connections to internal parties

If you have several connections configured for your telephone system, you can do the following for each internal party:

- ◆ Assign a send connection or allow the internal party to select the line for each external call (select line).
- ◆ Assign one or several receive connections. Only calls received via one of the assigned connections are signalled on the device.

Assigning a send connection

Prerequisite: you have configured at least one VoIP connection on your phone.

 →  **Settings** → **Telephony** → **Send Connections**

A list of handsets is displayed.

 Select the handset that should be assigned a new send connection and press the display key **OK**.

 Choose **Sel. at each call** or a connection as the send connection. All configured connections are displayed with the names you have set.

Save Press the display key to save the changes.

Sel. at each call is only offered if more than one connection is configured.

If you select **Sel. at each call**, you can select the connection you want to use for each call you make.

The Gigaset.net connection is not included in the selection for the send connections. Gigaset.net numbers (suffix #9) are automatically dialled via Gigaset.net.

Please note

If the send connection on a handset is deleted or deactivated, the fixed line connection is assigned to it as the send connection.

Assigning receive connections

Prerequisite: several connections are configured for your phone.

 →  **Settings** → **Telephony** → **Rec. Connections**

A list of internal parties is displayed (handsets, local answering machines).

 Select the internal parties that should be assigned new receive connections and press the display key **OK**.

A list of all configured connections and the Gigaset.net connection is opened. You can select **Yes** or **No** for each connection.

 Select **Yes** if you want the relevant connection to be the receive connection for the internal party. Select **No** if it should not be the receive connection.

 Change to the next connection.

- ▶ Repeat these two steps for each connection.
- ▶ Press the display key **Save** to save the changes.

Further information on how to assign receive connections to local answering machines for a Gigaset C610A IP can be found on [page 121](#).

Please note

- ◆ If a new connection is configured, it is assigned as the receive connection to all internal parties and **Answer Machine 1**.
- ◆ If a connection is not assigned as the receive connection to any internal party, calls on this connection will not be signalled.

Updating the phone firmware

Prerequisite: the phone is connected to the Internet (i.e., connected to a router, → [page 21](#)).

If necessary, you can update your phone's firmware.

The firmware update is downloaded directly from the Internet by default. The relevant Web page is preconfigured in your phone.

Prerequisite:

The phone is in idle status i.e.,

- ◆ No calls are being made.
- ◆ There is no internal connection between the registered handsets.
- ◆ The base menu is not open in any of the handsets.

Starting the firmware update manually

 →  **Settings** → **System**

Update Firmware

Select and press **OK**.

Enter the system PIN and press **OK**.

The phone establishes a connection to the Internet.

Yes Press the display key to start the firmware update.

Please note

- ◆ The firmware update can last up to six minutes, depending on the quality of your DSL connection.
- ◆ When updating from the Internet, checks are made to ensure that no newer version of the firmware exists. If this is not the case, the operation is terminated and a message is issued to that effect.

Updating firmware automatically

Your phone will check daily whether a newer firmware version is available from the Internet on the configuration server. If firmware updates are available, the message

New firmware available is displayed in the idle display of the handset.

Yes Press the display key to confirm the prompt.

The firmware is uploaded to your phone.

Please note

If the telephone is not connected to the Internet at the time when the check for new firmware is to be performed (e.g., because the router is deactivated), the check is performed as soon as the phone is reconnected to the Internet.

You can deactivate the automatic version check via the Web configurator.

Repeater support

You can increase the range and signal strength of your phone using a repeater. To do this you need to activate repeater mode. This will terminate any calls that are in progress at the time.

Prerequisite: Eco mode(+) is deactivated.

 →  → **System** → **Repeater Mode**

Change Press the display key to activate or deactivate repeater mode (☑ = on).

Yes Press the display key to confirm the prompt.

Please note

- ◆ Repeater support and **Eco Mode / Eco Mode+ (→ [page 136](#))** cancel each other out, i.e., both functions cannot be used at the same time.
- ◆ The default encrypted transmission setting is deactivated when repeater mode is activated.

Resetting the base to the default settings

The individual settings are reset.

Resetting the base via the menu

When the settings are restored:

- ◆ Handsets are still registered
- ◆ The system PIN is not reset.

The following settings in particular are reset to the default settings (you can make the settings marked "*" via the Web configurator):

- ◆ The entered VoIP connections (are deleted)
- ◆ The assignment of send and receive connections
- ◆ Audio settings for VoIP connections *
- ◆ DTMF settings *
- ◆ Own area code
- ◆ Settings for the local network
- ◆ The names of the handsets
- ◆ SMS settings (e.g., SMS service centres)
- ◆ Eco Mode and Eco Mode+ are deactivated.
- ◆ PABX connection settings
- ◆ Digit and display key assignments as well as the  key
- ◆ Settings for network services: call divert
- ◆ Gigaset C610A IP: answering machine settings and personal announcements are deleted

The following lists are deleted:

- ◆ SMS lists
- ◆ Call lists
- ◆ Answering machine lists (Gigaset C610A IP)

→ System → Base Reset

Enter the system PIN and press **OK**.

Press the display key.

After the reset, the base is restarted. The restart takes around ten seconds.

The installation wizard is launched (→ [page 23](#)).

Resetting the base using a key on the base

As with resetting the base via the menu, all individual settings are reset. The **system PIN** is also reset to **"0000"** and all **handsets** registered above and beyond the scope of delivery **will be de-registered**.

Please note

For instructions on re-registering the handsets after a reset (where applicable), → [page 143](#).

- ▶ Remove the cable connections from the base to the router (→ [page 21](#)) and fixed line (→ [page 19](#)).
- ▶ Remove the base power adapter from the socket (→ [page 19](#)).
- ▶ **Press and hold** the registration/paging key (→ [page 5](#)).
- ▶ Plug the power adapter back into the power socket.
- ▶ Press and hold the registration/paging key (at least 20 sec.).
- ▶ Release the registration/paging key. The base has now been reset.

Restarting the base

When the handset is in idle status:

 →  → **System** → **Base Restart**

The firmware for the base is then rebooted. This process takes about 20 seconds.

Checking the base MAC address

Depending on your network configuration, you may have to enter your base MAC address in your router's access control list, for example. You can check the MAC address on the handset.

In idle status:

 Open menu.

Press keys in sequence.

The MAC address is displayed.

Back Return to idle status.

Connecting the phone to a PABX

The following settings are only necessary if your PABX requires them; see the PABX user guide.

Please note

You cannot send or receive SMS messages on PABXs that do not support Calling Line Identification.

Recall

The current setting is indicated by .

Setting recall (fixed line)

By default, your phone is set for operation on the main connection (recall 250 ms). For operation on a PABX, you may have to change this value. Please refer to the user guide for your PABX.

 →  → **Telephony** → **Recall**

 Select recall and press **Select** ( = set value). Possible values include: 80 ms, 100 ms, 120 ms, 180 ms, 250 ms, 300 ms, 400 ms, 600 ms, 800 ms.

Saving an access code (outside line code)

You can save two access codes: one for dialling via the fixed line and one for dialling via VoIP.

Prerequisite: you must enter an access code for external calls using your PABX, e.g., "0".

 →  → **Telephony** → **Access Code**

▶ You can enter data in the following fields:

Access external line with:

For dialling via the fixed line: enter or change the access code, max. three digits.

For:

Specify when the access code should be inserted for dialling via the fixed line:

Call Lists

The access code is put in front of numbers dialled from one of the following lists:

- The SMS list
- The accepted calls list
- The missed calls list
- An answering machine list (Gigaset C610A IP)

All Calls

The access code prefixes all numbers dialled.

Off

The access code for the fixed line is deactivated. It does not prefix any phone number.

Access external IP line with:

For dialling via VoIP connections: Enter or change access code, max. 4 digits.

For:

Specify when the access code should also be dialled when dialling via VoIP:

Call Lists

For dialling from the SMS list, missed calls list, accepted calls list or an answering machine list (Gigaset C610AIP).

All Calls

For all numbers dialled on the handset.

Off

No access code should be dialled first for calls via a VoIP connection.

Save Press the display key.

Please note

The access code never prefixes any emergency numbers or SMS service centre numbers.

Setting pauses (fixed line)

Changing the pause after line seizure

You can change the length of the pause that is inserted between pressing the talk key  and sending the number.

 Open the main menu.

   0 +     

Press keys in sequence.

Enter number for the length of the pause (1 = 1 sec.; 2 = 3 secs; 3 = 7 secs) and press **OK**.

Changing the pause after recall key

You can change the length of the pause if your PABX requires this (refer to the user guide for your PABX).

 Open the main menu.

   0 +     

Press keys in sequence.

Enter a digit for the length of the pause (1 = 800 ms; 2 = 1600 ms; 3 = 3200 ms) and press **OK**.

Changing a dialling pause (pause after access code)

 Open the main menu.

   0 +     

Press keys in sequence.

Enter a digit for the length of the pause (1 = 1 sec.; 2 = 2 sec.; 3 = 3 sec.; 4 = 6 sec.) and press **OK**.

To insert a dialling pause: press and hold  for 2 seconds. A P appears in the display.

Configuring the phone via the Web configurator

The Web configurator for your Gigaset telephone enables you to make the settings for your phone conveniently on your PC.

- ◆ You can make settings that are also possible using your telephone handset using the web browser on your PC as an alternative, e.g., configure VoIP connections, download firmware updates or start Eco Mode.
- ◆ You can make additional settings that are not possible via the handset, e.g., meet particular prerequisites for connecting the phone to a company network or adjust the voice quality on VoIP connections
- ◆ On the base, you can save data that is required to access specific services on the Internet. These services include access to public and private online directories, to the POP3 server for your e-mail account and synchronising date/time with a time server.
- ◆ You can save data for your phone (base and handsets) in files on the PC and, in the event of an error, you can download them onto your phone again.

Below you will find a list of the Web configurator functions and the navigation paths to the Web configurator pages where the functions are available. See the Online Help for the Web configurator (→ [page 184](#)) for a detailed description of the Web pages and the required entries.

Connecting the PC with the telephone's Web configurator

Prerequisites:

- ◆ A standard Web browser is installed on the PC e.g., Internet Explorer version 7.0 or higher, Firefox version 3.5 or higher or Apple Safari version 3.x.
- ◆ The phone and PC are directly connected with each other via a router. The settings of any existing firewall installed on your PC allow the PC and phone to communicate with each other.

There are two ways of connecting your PC to the Web configurator of the phone:

- ◆ Via the phone's IP address in the local network;
- ◆ Via the Gigaset configuration service, if the phone and PC are connected to the Internet (→ [page 178](#)).

Please note

- ◆ Depending on your VoIP provider, it is possible that you will be unable to change individual settings in the Web configurator.
- ◆ The phone is **not** blocked while you select your settings in the Web configurator. You can make calls with your phone or modify settings at the same time.
- ◆ While you are connected to the Web configurator, it is blocked to other users. It cannot be accessed by more than one user at any time.

Establishing a connection via the phone's IP address

- ▶ Establish the telephone's current IP address on the handset:
You can see the phone's current IP address in the handset display by **briefly** pressing the registration/paging key on the base.
Your phone's IP address can change if you have activated dynamic IP address assignment (→ [page 163](#)).

Warning

If one of the four parts of the IP address contains leading zeros (e.g., 002), these zeros must not be entered in the Web browser address field. Otherwise, the Web browser will not be able to establish a connection to the Web configurator.

Example: the IP address 192.168.002.002 is displayed on the phone. 192.168.2.2 should be entered in the address field.

- ▶ Launch the web browser on your PC.
- ▶ Enter **http://** and the telephone's current IP address (for example: `http://192.168.2.2`) into the address field of the Web browser.
- ▶ Press the return key.

A connection is established to the phone's Web configurator.

Establishing a connection via Gigaset config

Prerequisite: your PC and phone are connected to the Internet.

- ▶ Launch the web browser on your PC.
- ▶ Enter the following URL into the Web browser's address field:
<http://www.gigaset-config.com>
- ▶ Press the return key.

You will receive a message stating that the connection has been forwarded to your phone.

If several Gigaset phones can be reached via your Internet connection, you are asked which of these phones you would like to be connected to.

After successfully forwarding the connection, the Web configurator's **Login** page is displayed in the Web browser.

Please note

The connection between the PC and the Web configurator is a local connection (LAN connection). The Internet is only accessed to establish the connection.

Logging in to/off the Web configurator

Prerequisite: your PC and phone are connected to the Internet.

Logging in, setting the interface language

Once you have successfully established the connection, the **Login** Web page is displayed in the Web browser.

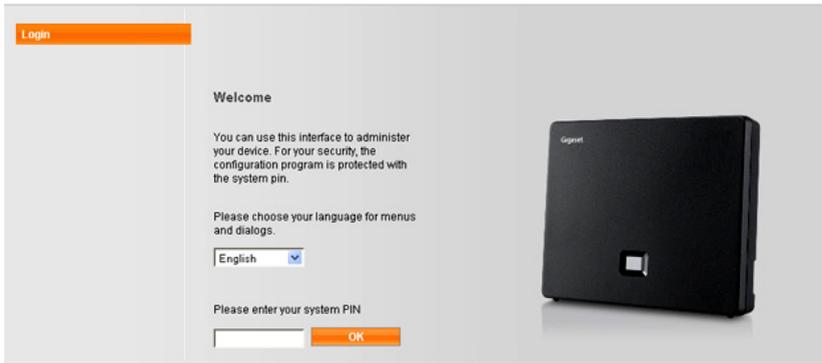

Figure 1 Start screen

You can select the language you want the menus and Web configurator dialogues to be displayed in. The language that is currently selected is displayed in the first field on the Web page.

- ▶ If necessary, click to open the list of available languages.
- ▶ Select the language.

The Web page is reloaded in the selected language. This may take some time, as the web pages for the Web configurator for the required language are loaded onto the base from the configuration server.

- ▶ Enter your phone's system PIN (default setting: 0000) in the bottom field of the Web page, to access the Web configurator functions.
- ▶ Click **OK**.

Once you have successfully logged in, the **Home** Web page opens with general information on the Web configurator.

If you enter an incorrect system PIN, a corresponding message is displayed. You are prompted to re-enter the PIN.

If you enter an incorrect system PIN a second time, the PIN field is blocked for a short time (greyed out). The duration of the block will double each time a PIN is subsequently entered incorrectly.

Please note

- ◆ If the system PIN is still set as 0000 on the phone (default setting), you will be notified during login that the device is not secure and you should change the PIN. You can deactivate this security notice for subsequent logins by selecting the option “**Don’t show this security advice again.**” Click **OK** to close the dialog box.
- ◆ If you do not make any entries for a lengthy period (approx. 10 minutes), you are automatically logged off. The next time you try to make an entry or open a Web page, the **Login** Web page is displayed. Re-enter the system PIN to log back in again.
- ◆ Any entries that you did not save on the phone before automatic log-off will be lost.

Logging off

In the menu bar (→ [page 181](#)) at the top right of every Web page in the Web configurator, you will see the **Log Off** command. Click **Log Off** to log off from the Web configurator.

Warning

Always use the **Log Off** command to end the connection to the Web configurator. If, for example, you close the Web browser without logging off beforehand, it is possible that access to the Web configurator is blocked for a few minutes.

Understanding the structure of the Web configurator pages

The Web configurator pages (Web pages) contain the UI elements shown in [Figure 2](#) (example).

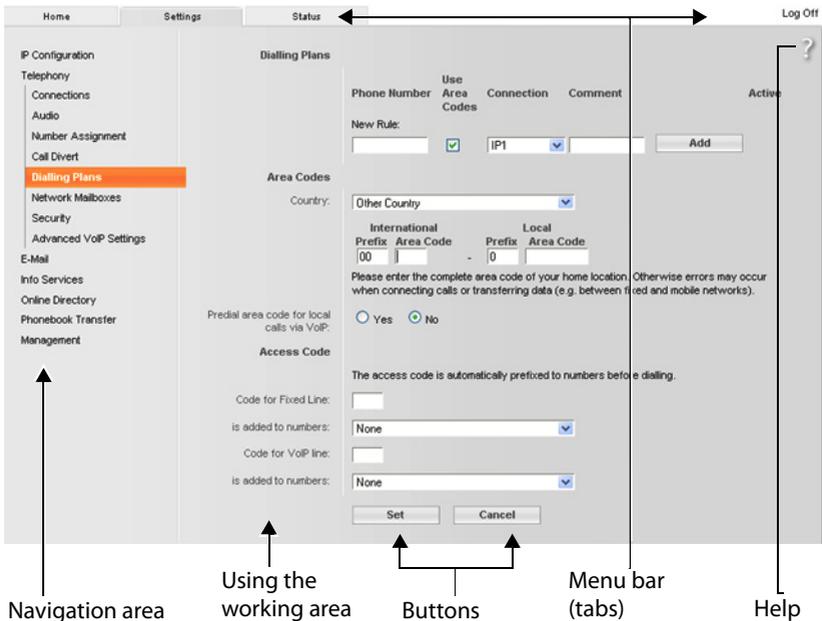

Figure 2 Example of the structure of a Web configurator page

Menu bar

The Web configurator menus are displayed in the form of tab pages in the menu bar.

The following menus are available:

Home

The home page opens once you have logged in to the Web configurator. It contains information on the Web configurator functions.

Settings

This menu allows you to make settings on your phone.

If you select the **Settings** menu, a list containing this menu's functions is displayed in the navigation area (→ [page 182](#)).

Status

This menu provides you with information about your phone.

Log Off

You will find the **Log Off** function to the right of the menu bar on every Web page.

Please note

For an overview of the Web configurator menus, → [page 185](#).

Using the navigation area

The functions of the menu (→ [page 181](#)) selected in the menu bar are listed in the navigation area.

If you select a function, the associated page containing information and input fields opens in the working area. The selected function is highlighted in orange.

If a function is assigned subfunctions, these are listed below the function as soon as you select the function (in the example **Telephony**).

The relevant page for the first subfunction (highlighted in orange) is displayed in the working area.

Using the working area

Depending on the function selected in the navigation area, information or dialogue boxes are displayed in the working area that allow you to make or change your phone settings.

Making changes

Make settings via input fields, lists or options.

- ◆ There may be restrictions regarding the possible values for a field e.g., the maximum number of characters, entering special characters or certain value ranges.
- ◆ To open a list, click . You can choose between default values.
- ◆ There are two kinds of options:
 - Checkboxes: you can activate one or more options from a list. Active options are indicated by , non-active options by . You can activate an option by clicking . The status of the other options in the list does not change. You can deactivate an option by clicking .
 - Alternative options (radio buttons). The active option in the list is indicated by , and the non-active by . You can activate an option by clicking . The previously activated option is deactivated. You can only deactivate an option by activating another option.

Entering Cyrillic and Turkish characters

In the following section, the specified maximum number of characters permitted in a field refers to Latin characters and digits (1 character = 1 byte), i.e., 1 character means 1 byte.

Cyrillic and Turkish characters require 2 bytes each, e.g., with a field length of 16 characters, you can enter a maximum of 8 Cyrillic or Turkish characters.

If you enter too many characters into a field, the entry is rejected (not saved in the phone). The "old" field content (or the default settings) is retained and displayed again when the Web page is updated. No warning/confirmation is given.

Applying changes

As soon as you have made your change on a page, save and activate the new setting on the phone by selecting **Set**.

If your entry does not comply with the rules for this field, an appropriate error message is displayed. You can then repeat the input.

Warning

Changes that have not been saved on your phone are lost if you move to another Web page or the connection to the Web configurator is lost e.g., due to exceeding the time limit (→ [page 180](#)).

Using the buttons

Buttons are displayed in the bottom section of the working area. Depending on the current function of a Web page, various buttons are displayed. The functions of these buttons are described in the Online Help of the Web configurator. The most important buttons are:

Cancel

Reject changes made on the Web page and reload the settings that are currently saved in your phone to the Web page.

Set

Store changes made on a Web page on the phone.

Help

You will see a question mark at the top right of most Web pages. Click this question mark to open the Online Help for this Web page in a separate window.

The Help pages are downloaded directly from the configuration server.

Please note

You may need to change your browser settings to display the Help pages correctly. Internet Explorer and Firefox require the following settings, for example:

- ▶ You must allow blocked active content for Help (right-click the information bar at the top of the browser window).
- ▶ Allow the pages to use their own fonts or set Arial as the standard font (general option).

Means of representation in Help

Bold font

User interface terms such as menu functions, names of input fields and options.

[Bold font]

Buttons.

[About this Help](#) ▶ / [About this Help](#) ▼

Blue, underlined text shows hidden text.

Click this link once to show the hidden text. The arrow at the end of the link rotates by 90°.

Click [About this Help](#) ▼ to hide the text again.

Telephony > Dialling Plans

Navigation to a Web configurator function.

Matches the illustration "Telephony → Dialling Plans" in this user guide (→ [Opening Web pages](#) below).

Searching in Help

Click inside the Help window and press the **Ctrl** and **F** keys. A search dialogue opens.

Opening Web pages

A brief outline of how to navigate to the individual Web configurator functions is given below.

Example

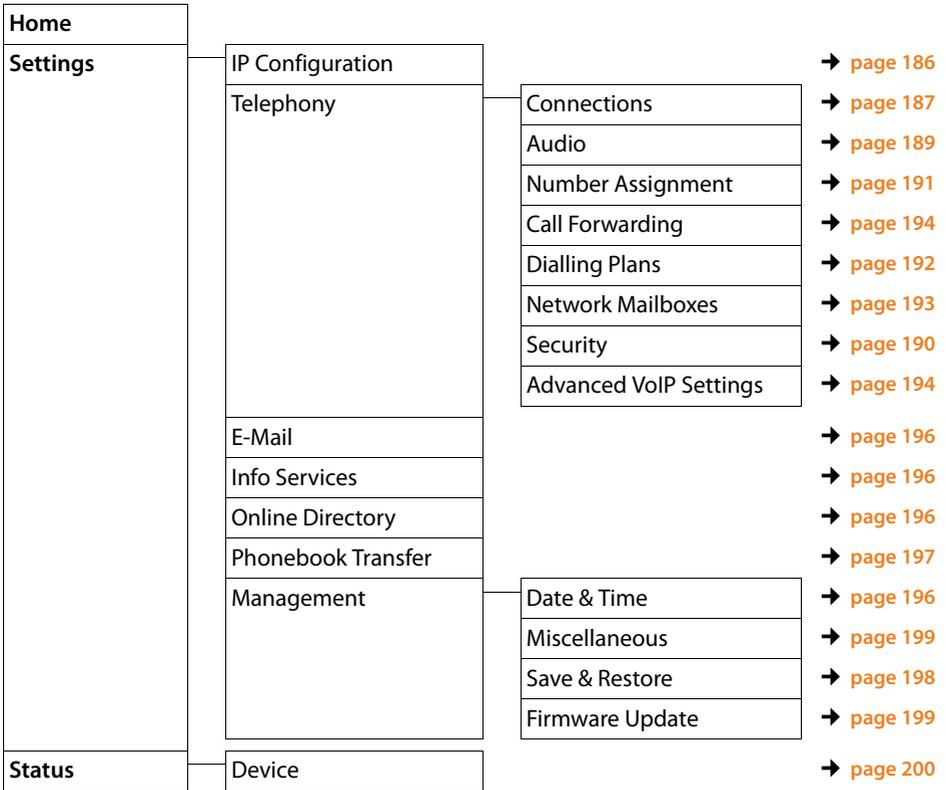

Defining dialling plans:

Settings → Telephony → Dialling Plans

To open the Web page, proceed as follows after registration:

- ▶ Select the **Settings** menu in the menu bar.
- ▶ Click the **Telephony** function in the navigation area.
The **Telephony** subfunctions are displayed in the navigation tree.
- ▶ Select the **Dialling Plans** subfunction.

Web configurator menu

Functions of the Web configurator

Connecting the base to the local network (LAN/router)

You can find the functions for connecting to the LAN on the Web page:

Settings → IP Configuration

In most cases, special settings are not required to connect the phone to the router/ a local network. Your phone is preconfigured for dynamic assignment of the IP address by default (DHCP). In order for your router to "recognise" the phone, dynamic IP address assignment must also be activated on the router i.e., the router's DHCP server must be activated.

If the DHCP server cannot or should not be activated, you must assign a fixed/static IP address to the phone (→ [page 163](#)). A static IP address is useful, for example, if port forwarding or a DMZ is set up on the router for the phone.

You can also assign a static IP address via the handset.

You can also use the Web configurator to make further settings that are required if you connect your phone to a large (company-wide or organisation-wide) network, or if you want to manage the phone remotely using the Web configurator. You can:

- ◆ Store **VLAN Identifier / VLAN Priority** for access to a tagged VLAN.
- ◆ Allow PCs outside your LAN to connect to the Web configurator.

Warning

- ◆ Authorising access from other networks increases the risk of unauthorised access. It is therefore recommended that you disable remote access if you no longer require it.
- ◆ The Web configurator can only be accessed from other networks if your router passes on the service requests from "outside" to port 80 (the default port) of the phone. Make sure you read the user manual for your router.

Managing base connections; activating/deactivating connections

You can manage your base connections using the Web page:

Settings → Telephony → Connections

This Web page displays a list with all possible connections and your status (e.g., connected, registered):

◆ Fixed Line Connection

You do not have to configure the fixed line connection. You can make or receive calls on the fixed line connection once your phone is connected to the fixed line connection.

You can change the name of the fixed line connection and the setting for the **Recall** by clicking the corresponding **[Edit]** button.

The name entered is shown, e.g., for calls to your fixed line connections, in the display of the registered handsets and in the call list.

The recall is set by default for operating the phone on the main connection.

You must change it if necessary if you connect the phone to a PABX (see the user guide for your PABX). The flash time specifies the duration of the line interruption used to send control signals to the exchange or the telecommunications system (call transfer, setting up a consultation call etc.).

◆ Gigaset.net

The Gigaset.net connection is preconfigured in your phone. Your phone is pre-assigned a Gigaset.net number.

You can activate and deactivate the Gigaset.net connection. If the connection is deactivated, the phone will not register with the Gigaset.net service. You are then not available via the Gigaset.net connection.

Click the corresponding **[Edit]** button to change the name of the Gigaset.net connection and deactivate STUN.

The Gigaset.net connection uses a STUN server as standard. In the sent data packets, Gigaset.net replaces the private IP address of your phone with its public IP address.

If you operate your phone behind a router with symmetric NAT, STUN cannot be used. You must deactivate it. Otherwise, when making Gigaset.net calls you will not be able to hear the caller.

◆ IP Connection

You can assign up to six VoIP connections (VoIP phone numbers) to your phone. You need to set up a VoIP account with a VoIP provider for each VoIP phone number. You must save the access data for each account and for the relevant VoIP provider in the phone.

A list entry is available for each VoIP connection; this is used to configure and manage the connection.

To do this, click on the corresponding **[Edit]** button.

Configuring/deleting VoIP connections

To configure and delete VoIP connections, open the Web page

Settings → Telephony → Connections

Click on the [Edit] button next to the list entry for the VoIP connection.

This opens a Web page with the following areas:

- ◆ **Auto Configuration**
- ◆ **Profile Download**
- ◆ **Personal Provider Data**
- ◆ **General data of your service provider**
- ◆ **Network data for your service provider**

For detailed information on the areas, see the Online Help for this Web page.

Open the Online Help by clicking on the  question mark (at the top right of the Web page).

There are various ways of configuring a VoIP connection:

- ◆ Some providers support auto configuration with an auto configuration code. In this case you simply have to enter this code in the **Auto Configuration** area. All the required VoIP data is then downloaded into the areas specified above. The configuration is complete.
- ◆ Most providers supply provider profiles with the general provider data on the configuration server. Select your provider in the **Profile Download** area and download the provider profile to the phone. The profile data is downloaded into the **General data of your service provider** and **Network data for your service provider** areas.

You then have to enter the data for your VoIP account in the **Personal Provider Data** area.

In exceptional cases, you also have to adjust the settings in the **Network data for your service provider** area to suit the settings for your router:

- If you cannot hear the caller on an outgoing call, you may have to switch between outbound proxy server mode and STUN use. In the sent data packets, STUN or outbound server replaces the private IP address of your phone with its public IP address. If you operate your phone behind a router with symmetric NAT, STUN cannot be used.
- If you are sometimes unavailable for incoming calls, you may have to adjust the value in **NAT refresh time**:
If you have not activated port forwarding or set up a DMZ on the router for the phone, an entry in the routing table for the NAT (in the router) is required to make the phone available. The phone must confirm this entry in the routing table at certain intervals (**NAT refresh time**) so that the entry stays in the routing table.
- ◆ There is no provider profile for your provider.
If this is the case, you must make the settings in the **Personal Provider Data**, **General data of your service provider** and **Network data for your service provider** areas yourself. Your VoIP provider will supply you with this data.

Optimising voice quality for VoIP connections

Functions to improve the voice quality on VoIP connections are available on the Web page:

Settings → Telephony → Audio

The voice quality for VoIP connections is mainly determined by the **voice codec** used for transferring the data and the available **bandwidth** of your DSL connection. In the case of the voice codec, the voice data is digitalised (coded/decoded) and compressed. A "better" codec (better voice quality) means more data needs to be transferred, i.e., perfect voice data transfer requires a DSL connection with a larger bandwidth.

You can influence the voice quality by selecting (bearing in mind the bandwidth of your DSL connection) the voice codecs your phone is to use, and specifying the order in which the codecs are to be suggested when a VoIP connection is established.

Default settings for the codecs used are stored in your phone; one setting optimised for low bandwidths and one for high bandwidths.

You can generally select one of these standard settings for all VoIP connections on your phone. If your DSL connection has a low bandwidth, you can also exclude parallel VoIP connection to increase the voice quality.

You can also make the settings for the voice codecs yourself by selecting the voice codecs to be used for each VoIP connection on your phone and specifying the sequence in which they should be suggested when establishing a VoIP connection.

The following voice codecs are supported by your phone:

G.722

Excellent voice quality. The **broadband** speech codec **G.722** works at the same bit rate as G.711 (64 kbit/s per speech connection) but with a higher sampling rate. This allows higher frequencies to be played back. The speech tone is therefore clearer and better than for the other codecs (High Definition Sound Performance).

G.711 a law / G.711 μ law

Excellent voice quality (comparable with ISDN). The necessary bandwidth is 64 kbit/s per voice connection.

G.726

Good voice quality (inferior to that with G.711 but better than with G.729). Your phone supports G726 with a transmission rate of 32 kbit/s per voice connection.

G.729

Average voice quality. The necessary bandwidth is less than or equal to 8 kbit/s per voice connection.

To save additional bandwidth and transmission capacity, on VoIP connections that use the **G.729** codec you can suppress the transmission of voice packets in pauses ("Silence Suppression"). Instead of the background noises in your environment, your caller then hears a synthetic noise generated in the receiver (option: **Enable Annex B for codec G.729**).

Please note

Observe the following for good voice quality:

- ◆ When making calls using VoIP, avoid performing other Internet activities (e.g., surfing the Internet).
- ◆ Please note that voice delays can occur depending on the codec used and the network capacity utilisation.

Making security settings – managing certificates for TLS authentication

The phone supports the establishment of secure data connections on the Internet with the TLS security protocol (Transport Layer Security). With TLS, the client (the phone) uses certificates to identify the server. These certificates must be stored on the base.

You can manage TLS certificates using the Web page:

Settings → Telephony → Security

This page contains the **Server Certificates / CA Certificates** lists. They contain the certificates saved in the base. The certificates have either already been saved on the base by default, or you have downloaded them to your base via the **Security Web** page.

The **Invalid Certificates** list contains the certificates received from servers that have not passed the certificate check when establishing a connection, and certificates from the **Server Certificates / CA Certificates** lists that have become invalid (e.g., because they have expired).

You can remove certificates and download new certificates to the base, and you can also accept or reject invalid certificates.

If the connection to a data server on the Internet is not made because the phone does not accept the certificate received from the server (e.g., when downloading your e-mail messages from the POP3 server), you will be prompted to open the **Security Web** page.

The **Invalid Certificates** list contains the certificate used to make the connection. You can display information on the certificate by marking it and clicking on the **[Details]** button. This information includes who issued the certificate (certification authority) and who for, as well as its validity period.

You must use the information to decide whether to accept or reject the certificate.

If you accept the certificate, depending on its type, it is transferred to one of the **Server Certificates / CA Certificates** lists (even if it has already expired). If a server responds again with this certificate, this connection is accepted immediately.

If you decline the certificate, it is transferred to the **Server Certificates** list with the label (**rejected**). If a server responds again with this certificate, this connection is rejected immediately.

Assigning send and receive connections

For the number assignment, open the Web page:

Settings → Telephony → Number Assignment

Assign send and receive connections to the registered handsets and receive connections to the answering machines for the Gigaset C610A IP base.

Please note:

- ◆ During registration, each handset is automatically assigned the fixed line connection as a send connection and all base connections as receive connections.
- ◆ You can assign each handset either a fixed send connection or a connection selection. For connection selection, you choose the connection to be used for each call.
- ◆ The Gigaset.net number is fixed as the send connection for each registered handset. Numbers that end in #9 are automatically dialed via Gigaset.net.

And on the Gigaset C610A IP:

- ◆ Once the new entry is made, each connection is assigned to integrated answering machine 1 as a receive connection.
- ◆ Answering machines 2 and 3 are only activated if you have assigned each one at least one receive connection. If an answering machine is not activated, it does not appear on the answering machine list and you cannot activate it.
- ◆ Each receive connection can only be assigned to one answering machine.

Please note

- ◆ You can override the assignment of the send connection for certain phone numbers by defining dialling plans for these numbers.
- ◆ For number assignment → [page 167](#) and → [page 121](#).

Activating the fixed line connection as the fallback send connection

You can activate the fixed line connection on your phone as a fallback connection. If a call attempt fails via VoIP, an attempt is automatically made (without prompting) to establish a connection via the fixed line.

A fallback is used in the following situations:

- ◆ Your VoIP connections are busy
- ◆ The SIP server for the VoIP connection cannot be accessed
- ◆ The dialed VoIP connection has not yet been configured or has not been configured correctly (e.g., incorrect password)
- ◆ The phone does not have a connection to the Internet, for example, because your router is deactivated or not connected to the Internet.

Exception

SMS messages that are to be sent via a VoIP connection are **not** sent via the fallback connection.

The option to activate the fallback connection is on the Web page:

Settings → Telephony → Number Assignment

User-defined dialling plans – specifying rules for telephony

You can define your own dialling plans in the **Dialling Plans** area on the Web page:

Settings → Telephony → Dialling Plans

You can specify the following dialling plans:

- ◆ You can define a connection (fixed line or a VoIP connection) for specific phone numbers that are always used to dial these phone numbers and therefore for billing.
If you enter just a few digits (e.g., local area, national or mobile network code) any call to a number beginning with these digits will be made via the selected connection.
- ◆ If you block specific phone numbers, your phone will not establish a connection to these numbers (e.g., 0190 or 0900 numbers).

These dialling plans apply to all registered handsets. The send connection settings are inactive when you dial numbers that are governed by a dialling plan.

You can activate and deactivate the dialling plans as required.

Please note

Dialling plans, with the exception of a block, are not effective if you have assigned the choice of connection to a display key on the handset and you explicitly choose a send connection from the list of available connections before dialling.

Tips:

- ◆ Compare the rates for long-distance calls (especially for international calls) offered by your fixed line and VoIP providers, and determine which connection should be used specifically for these countries/locations, e.g., a dialling plan for the **Phone Number** "0033" would apply to every call made to France.
- ◆ Use dialling plans to define that numbers starting with a call-by-call number are always made via your fixed line connection. To do so, enter the call-by-call number in the **Phone Number** field.

Please note

If dialling plans overlap, the one with the greatest concordance will apply.

Example:

There is a dialling plan for the number "02" and one for the number "023". If you dial "0231..." the second plan will apply; if you dial "0208..." the first plan will apply.

Examples

All calls to the mobile phone network should be made via your VoIP connection with provider B.

Dialling plans:

Phone Number = 017 **Connection** = IP3, provider B
and the corresponding entries for "015" and "016".

Emergency numbers

If no emergency numbers are set by default, you should define dialling plans for emergency numbers yourself and assign them to a connection that you know supports emergency calls.

Local area codes – activating dialling plans for local calls using VoIP

If you use VoIP to make a call to the fixed line, you may also have to dial the area code for local calls (depending on the provider). You can avoid having to enter your own local area code by entering the full area code (with the international code) for the location where you are using the phone in the phone configuration and activating the **Predial area code for local calls via VoIP** option.

These settings are available in the **Area Codes** area on the Web page:

Settings → Telephony → Dialling Plans

Access codes – activating dialling plans when connecting to a PABX

If your phone is connected to a PABX, you may have to enter an access code for external calls (external prefixes e.g., "0").

Save one access code each for fixed line and VoIP connections and specify separately for VoIP and fixed line connections when the phone numbers should be automatically prefixed with the digits.

You can choose between "All", "None" and „from Call Lists“ or an answering machine list.

These settings are available in the **Access Code** area on the Web page:

Settings → Telephony → Dialling Plans

Entering the network mailbox, enabling/disabling the network mailbox

A list of the network mailboxes for all connections on your phone is available on the Web page:

Settings → Telephony → Network Mailboxes

You can enter the phone numbers for the network mailboxes in this list.

You can use this list to activate/deactivate the network mailboxes for all configured VoIP connections.

Making special settings for VoIP telephony

Activating call divert (call forwarding) for VoIP connections

The settings for call divert (call forwarding) are on the Web page:

Settings → Telephony → Call Forwarding

You can divert calls to your VoIP connections and to your Gigaset.net number.

You can divert calls to your VoIP connections to any external number (VoIP, fixed line or mobile number). Call divert takes place via VoIP.

You can divert calls to your Gigaset.net number within the Gigaset.net, i.e., to another Gigaset.net number.

For each of your VoIP connections (VoIP accounts), you can determine if and when calls to the corresponding VoIP number should be diverted to a different VoIP phone number.

Setting DTMF signalling for VoIP

You make the settings for DTMF signalling in the **DTMF over VoIP connections** area on the Web page:

Settings → Telephony → Advanced VoIP Settings

DTMF signalling is required, for example, for querying and controlling certain network mailboxes via digit codes or for remote operation of an answering machine.

To send DTMF signals via VoIP you must first define how key codes should be converted into and sent as DTMF signals: as audible information via the speech channel or as a "SIP Info" message. Ask your VoIP provider which type of DTMF transmission it supports.

You can configure your phone so that, for each call, it tries to set the appropriate type of DTMF signalling for the current codec (**Automatic**).

Or you can explicitly define the type of DTMF signalling:

- ◆ **Audio** or **RFC 2833** if DTMF signals are to be transmitted acoustically (in voice packets).
- ◆ **SIP Info** if DTMF signals are to be transmitted as code.

Please note

- ◆ The settings for DTMF signalling apply to all VoIP connections (VoIP accounts).
- ◆ DTMF signals cannot be transmitted in the audio path (**Audio**) on broadband connections (the G.722 codec is used).

Configuring call transfer via VoIP

You make the settings for call transfer in the **Call Transfer** area on the Web page:

Settings → Telephony → Advanced VoIP Settings

You can connect an external call to one of your VoIP connections with a second external participant (depending on the provider). You do this by establishing an external consultation call to the second participant and pressing the recall key on the handset once you have registered the second participant. The call is forwarded.

You can expand or change the settings for call transfer as follows:

- ◆ You can activate call transfer by ending the call. The two external participants are connected with one another when you press the end call key  on the handset. Your connections with the participants are terminated.
- ◆ You can activate direct call transfer. You can then transfer the call before the two participants have registered.
- ◆ You can deactivate call transfer with the recall key if you want to assign a different feature to the recall key (see below "**Defining recall key functions for VoIP (hook flash)**").

Defining recall key functions for VoIP (hook flash)

You can specify the function for the recall key on the Web page:

Settings → Telephony → Advanced VoIP Settings

Your VoIP provider may support special performance features. To make use of these features, your phone needs to send a specific signal (data packet) to the SIP server. You can assign this "signal" as the recall function to the recall key of the handsets.

Prerequisite: the recall key is not used for call divert (default setting, see above).

If you press this key during a VoIP call, the signal is sent. This requires that DTMF signalling via SIP info messages is activated on the phone (see above).

Defining local communication ports for VoIP

The settings for the communication ports are on the Web page:

Settings → Telephony → Advanced VoIP Settings

The following communication ports are used for VoIP telephony:

◆ SIP port

The communication port via which the phone receives (SIP) signalling data. The default standard port number is set to 5060 for SIP signalling.

◆ RTP port

Two consecutive RTP ports (consecutive port numbers) are required for each VoIP connection. Voice data is received via one port and control data via the other. The default standard port number range is set to 5004 - 5020 for voice transmission,

This setting only has to be changed if the port numbers are already being used by other subscribers in the LAN. You can then specify other fixed port numbers or port number ranges for the SIP and RTP port.

Configuring the phone via the Web configurator

If several VoIP phones are operated on the same router with NAT, it makes sense to use randomly selected ports. The phones must then use different ports so that the router's NAT is only able to forward incoming calls and voice data to one (the intended) phone. Use the Web configurator to specify a port number range for the SIP and RTP port that the ports are chosen from.

Making settings for access to Internet services

You can use the following Internet services on your phone.

◆ E-mail notifications

In order to use the e-mail function of your base on the handset, you have to save the address of the POP3 server and your personal access data for your mailbox in the base.

You can also specify the time interval at which your phone should check whether the POP3 server has received new e-mail messages, and specify whether authentication on the incoming e-mail server should be carried out via a secure connection.

You make the settings on the Web page:

Settings → E-Mail

◆ Customising info services for the Info Center and the Info Services screensaver

You can customise your personal services on the Gigaset.net server for your Info Center (→ [page 111](#)) and for the Info Services (→ [page 153](#)) screensaver. You can access the Gigaset.net server (URL and personal access data) on the Web page:

Settings → Info Services

You can also activate the Info Services screensaver for your phone.

◆ Using net directories

You have to select the provider whose net directories you want to use on the registered handsets.

You make the settings on the Web page:

Settings → Online Directory

◆ Managing the synchronisation of the base with a time server

By default, your phone is configured so that the date/time is transferred from a time server on the Internet.

Changes to the settings for the time server and activating/deactivating the synchronisation are done via the Web page:

Settings → Management → Date & Time

Deleting handset directories and downloading to/from the PC

The functions to edit the directories are on the Web page:

Settings → Phonebook Transfer

The Web configurator has the following options for editing the directories of the registered handsets.

- ◆ Store the directories on a PC. Entries are stored in vCard format in a vcf file on the PC. You can download these files onto every registered handset. You can also copy directory entries to your PC directory.
- ◆ Copy contact details from your PC address book to handset directories. Export the contacts in vcf files (vCards) and transfer them to directories for the handsets using the Web configurator.
- ◆ Delete the directory on the handset.
If you have edited the directory file (vcf file) on the PC and would like to load this modified directory to the handset, you can delete the current directory on the handset before the transfer.

Tip: back up the current directory on your PC before deleting it. You can then reload it if the modified directory is affected by formatting errors and some, or all, of it cannot be loaded onto the handset.

Please note

- ◆ You can find information on vCard format (vcf) on the Internet e.g., at:
www.en.wikipedia.org/wiki/VCard (English) or
www.de.wikipedia.org/wiki/VCard (German)
(You can set the display language at the bottom left-hand side in the navigation area of the Web page.)
- ◆ If you wish to copy a directory (vcf file) with multiple entries stored on the PC to the Microsoft Outlook™ directory, please proceed as follows:
Microsoft Outlook™ only ever transfers the first (directory) entry from the vcf file to its directory.

Transfer rules

The directory entries from a vcf file that are loaded onto the handset will be added to the directory. If an entry already exists for a name, it will either be supplemented or a new entry for the name is created. The process will not overwrite or delete any phone numbers.

Please note

Depending on your device type, up to three entries with the same name are created in the directory for each vCard – one entry per entered number.

Understanding directory file content (vcf file)

The following data (if available) is written into the vcf file for entry into the directory or transferred from a vcf file into the handset directory.

- ◆ Name
- ◆ First name
- ◆ Number
- ◆ Number (office)
- ◆ Number (mobile)
- ◆ E-mail address
- ◆ Birthday (YYYY-MM-DD) and time of the reminder call (HH:MM) separated by a "T" (example: 2008-12-24T11:00).

Other information that a vCard may contain is not entered into the handset directory.

Example of an entry in vCard format:

```
BEGIN:VCARD
VERSION:2.1
N:Smith;Anna
TEL;HOME:1234567890
TEL;WORK:0299123456
TEL;CELL:0175987654321
E-MAIL:anna@smith.com
BDAY:2008-12-24T11:00
END:VCARD
```

Saving and restoring system settings

Once you have configured your base and after each configuration change, you can save the current base settings in a file on the PC (suffix .cfg).

If you change the settings accidentally or you need to reset the base due to a fault (base reset), you can reload the saved settings from the file on your PC to your phone.

The contents of the .cfg file include:

- ◆ The settings for the local network (IP configuration)
- ◆ The data for the (VoIP) connections established
- ◆ The assignment of send and receive connections
- ◆ Your own local area code and access code
- ◆ The network mailbox number
- ◆ The Internet services settings
- ◆ The ECO DECT settings.

You can save and restore the system settings via the Web page:

Settings → Management → Save & Restore

Changing the base settings, registering handsets

You can use the Web configurator to:

- ◆ Switch the base to registration mode to register more handsets to the base. This setting corresponds to pressing and holding the Registration/Paging key on the front of the base.
- ◆ Activate Eco Mode or Eco Mode+. For Eco Mode see [page 136](#).
- ◆ Change the system PIN (→ [page 162](#)) for your phone.
- ◆ Activate and deactivate the LED for the Registration/Paging key on the front of the base. See [page 5](#) for the meaning of the LED.
- ◆ Activate/deactivate the display of VoIP status messages on your handset.

The base settings are on the Web page

Settings → Management → Miscellaneous

Updating firmware for the base/restoring firmware updates, activating/deactivating automatic updates

You can start firmware updates and downgrades via the Web page:

Settings → Management → Firmware Update

Regular updates to the base firmware and the provider profile for your VoIP connections (general provider data) are made available on an Internet configuration server. You can download these updates onto your base as required. The URL for this server is stored in the base.

You have the following options:

- ◆ Starting a firmware update

If a **new** version of the firmware is available, this is downloaded to the base and the base is restarted. A firmware update lasts around six minutes. The duration also depends on the bandwidth of your DSL connection.

- ◆ Enabling/disabling the automatic version check

When the version check is enabled, the phone checks on a daily basis whether the Gigaset configuration server has a new version of the phone firmware.

If the telephone is not connected to the Internet at the time when the check is to be performed (e.g., because the router is disabled), the check is performed as soon as the phone is reconnected to the Internet.

If a new version is available, a message to this effect is shown on the display of the registered handsets. You can start the update of the firmware on one of the handsets.

- ◆ Downgrading firmware

You have the following options:

- You can reload the firmware version that was loaded before the last update on the base.
- You can reload the firmware version that was loaded by default onto the phone.

The selected firmware is reloaded on the phone and the current firmware is overwritten.

Displaying the phone status

The **Status** tab includes the following information about the phone:

- ◆ IP and MAC address for the base
- ◆ Version of the firmware currently loaded

The version is shown in the following format: aabbbxxyyyz.

aa denotes the phone's product variant

bbb is the version of the firmware and xx the sub-version (yyyz are only significant for the service).

Edition 420200000 means that version 20 of the firmware is currently loaded on your base.

- ◆ The connections for your phone and their status.
- ◆ A list of the registered handsets

Customer service & product warranty – Australia and New Zealand

IMPORTANT

Please retain your sales receipt as proof of the date of purchase.

Customer Service

If you require assistance in operating this product please contact us

AUS: 1300 780 878 or by e-mail at the Customer Care section of our website at www.gigaset.com/au

NZ: 0800 780 878 or by e-mail at the Customer Care section of our website at www.gigaset.com/au

If you are trying to access a Network Service and require assistance specifically related to the network service or would like to subscribe to the service, contact your service provider.

Product Warranty

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a repair or replacement for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Subject to the conditions stated in this Product Warranty Section, this product, excluding battery and accessory devices, is guaranteed against any defect in materials or workmanship under conditions of normal use for a period of 12 months from date of purchase (Product Warranty).

The benefits conferred by this warranty are in addition to other warranties and remedies that are implied under the Australian Trade Practices Act and similar Country, State and Territory laws (Statutory Rights). For New Zealand customers, this warranty is in addition to statutory rights observed under New Zealand Legislation.

Subject to your Statutory Rights, the goods will not be eligible for service under this warranty if:

- 1 Proof of purchase cannot be provided;
- 2 The defect was caused by an accident, misuse, abuse, improper installation or operation, vermin infestation, lack of reasonable care, unauthorised modification, loss of parts, tampering or attempted repair by a person not authorised by Gigaset; or
- 3 The product has been damaged by lightning or a mains power surge.
- 4 The Phone was not imported into Australia by Gigaset Communications GmbH.

Customer service & product warranty – Australia and New Zealand

To obtain service during the terms of this warranty and/or to claim warranty call the Information Line on

AUS: 1300 780 878 or by e-mail at the Customer Care section of our website at www.gigaset.com/au

NZ: 0800 780 878

If it is necessary to have the product serviced, the customer service representative will inform you of the product return process. If it is necessary to have the product serviced under warranty in both Australia and New Zealand you will need to return the product to your place of purchase. If this is not possible please call the relevant Technical Support line listed in this document whereby the customer service representative will inform you of the product return process. Except as explicitly stated in this document, all other expenses with regard to claiming Product Warranty shall be borne by you.

Please ensure that:

- 1 You provide proof of purchase;
- 2 Your product is suitably packaged; and
- 3 You have included all components from the original purchase.

In Australia and New Zealand the product will be serviced within ten business days after the defective product is received by the authorised agent.

Any and all warranty services referred to under this Product Warranty will be provided

- ▶ In **Australia** by CommsPlus Distribution, Unit 3a, 100 Station Street, Nunawading, Victoria, 3131 Phone: **1300 780 878**, and
- ▶ in **New Zealand** by Atlas Gentech (NZ) Limited, 76 Carbine Road, Mt Wellington, Auckland 1741 Phone: **0800 780 878**.

Subject to your Statutory Rights:

- 1 Any claim under this warranty is limited to the cost of repair or replacement of the product; and
- 2 If the goods are found to be in sound working order by the authorised service centre, you may be charged a fee for service and for any other direct costs associated with having the product delivered for service.

Replacement or repair services are only offered for products purchased in Australia and New Zealand that bear Gigaset Communications GmbH local registered N Number and Telepermit markings.

Please have your proof of purchase ready when calling.

IMPORTANT NOTICE

Under power failure conditions, this telephone may not operate. Please ensure that a separate telephone, not dependent upon local power, is available for emergency use.

Questions and answers

If you have any queries about the use of your telephone, visit our website at www.gigaset.com/service for assistance 24/7. The table below also lists steps for troubleshooting.

<p>The display is blank.</p> <ol style="list-style-type: none"> The phone is not connected to the mains power supply. <ul style="list-style-type: none"> ▶ Check the mains connection (→ page 20). Repeat the process at a later date.▶ You have changed the preconfigured server address. Correct the address. If necessary, reset the base.4. If Transmission error XXX is displayed, an error has occurred during the transmission of the file. An HTTP error code is displayed for XXX.<ul style="list-style-type: none">▶ Repeat the process. If the error occurs again, consult the Service department.5. If Check IP settings. is displayed, your phone may not be connected to the Internet.<ul style="list-style-type: none">▶ Check the cable connections between the base and router and between the router and the Internet.▶ Check whether the phone is connected to the LAN, i.e., it can be reached at its IP address.
<p>You cannot establish a connection to the phone with your PC's Web browser.</p> <ul style="list-style-type: none">▶ When establishing a connection, check the phone's local IP address that has been entered. You can check the IP address on your handset (page 163).▶ Check the connections between the PC and base. Transmit a ping command to your base, e.g., from your PC (ping <base's local IP address>).▶ You have tried to reach the phone via a secure http (https://...). Try again with http://...

On the Gigaset C610A IP:

An answering machine reports "PIN is incorrect" during remote operation.

You have entered the wrong system PIN.

- ▶ Repeat input of system PIN.

An answering machine is not recording any messages/has switched to answer only mode.

Its memory is full.

- ▶ Delete old messages.
- ▶ Play back new messages and delete.

An answering machine will not record a call or ends the recording.

1. An error tone sounds and the display shows **Not possible**.

- ▶ You are making the call via a broadband connection. A recording is not possible in this case. The attempt by the base to establish a non-broadband connection instead has failed.

2. The display shows **AM memory full. Delete messages..**

The answering machine's memory is full.

- ▶ Delete messages and then start recording again.

Or:

- ▶ End the call, delete old messages on the answering machine and then re-establish the connection.

Exclusion of liability

Some displays may contain pixels (picture elements), which remain activated or deactivated. As a pixel is made up of three sub-pixels (red, green, blue); it is possible that pixel colours may vary.

This is completely normal and does not indicate a fault.

Information on operating Gigaset VoIP telephones with Network Address Translation (NAT) routers

In general no special telephone or router configuration is required when operating a Gigaset VoIP phone with a NAT router. The configuration settings described in this section are only necessary if you encounter one of the following problems.

Typical problems caused by NAT

- ◆ No incoming calls are possible via VoIP. Calls to your VoIP phone number are not put through.
- ◆ Outgoing calls via VoIP are not connected.
- ◆ A connection is established with the other party, but you cannot hear them and/or they cannot hear you.

Possible solution

- 1 Change the port numbers of the communication ports (SIP and RTP ports) on your telephone (→ "**1. Changing the port numbers for SIP and RTP on your VoIP phone**").
- 2 In some cases, you must also define port forwarding for the telephone's communication ports on the router (→ "**2. Setting port forwarding on the router**").

1. Changing the port numbers for SIP and RTP on your VoIP phone

On your VoIP telephone, define different (local) port numbers for the SIP and RTP ports (between 1024 and 49152).

- ◆ These numbers must not be used by any other application or host in the LAN and
- ◆ be considerably higher or lower than the SIP and RTP port numbers that you usually use (and are preset on the phone).

This procedure is particularly useful if additional VoIP phones are connected to the router.

To change the SIP and RTP port numbers on your VoIP phone, proceed as follows:

- ▶ Connect your PC's browser to the Web configurator of the telephone and log in.
- ▶ Open the Web page **Settings** → **Telephony** → **Advanced VoIP Settings** and change the settings for the SIP and RTP ports (→ **page 195**).

To help you remember the new port numbers (e.g. for router configuration), you can choose numbers that are very similar to the standard settings, e.g.

SIP port	49060	instead of	5060
RTP port	49004 to 49010	instead of	5004 to 5010

- ▶ Save the changes on your telephone.
- ▶ Wait for the active VoIP connections to be re-registered. To do so, switch to the Web page **Settings** → **Telephony** → **Connections** to see the **Status** of your VoIP connections.
- ▶ Check to see whether the problem persists. If it does, perform step 2.

2. Setting port forwarding on the router

To ensure that your specified SIP and RTP port numbers are used on the WAN interface with the public IP address, you must define port forwarding rules for the SIP and RTP ports on the router.

To define port forwarding on the router, proceed as follows:

The terms used in the following can vary from router to router.

To forward a port, you must make the following specifications (example):

Protocol	Public port	Local port	Local host (IP)	
UDP	49060	49060	192.168.2.10	for SIP
UDP	49004–49010	49004–49010	192.168.2.10	for RTP

Protocol

Enter **UDP** as the protocol to be used.

Public port

Port number/port number range on the WAN interface

Local port

The SIP and RTP port numbers set on the telephone.

In the new firmware version for Gigaset VoIP telephones, you can set a RTP port range. In this case, you must also define corresponding port forwarding for this range.

Local host (IP)

Local IP address of your phone in the LAN. You can see the phone's current IP address in the handset display by pressing the paging key on the base.

To enable the router to perform this port forwarding, the DHCP settings of the router must ensure that the telephone is always assigned the same local IP address – i.e. the DHCP does not change the IP address assigned to the telephone during operation. Alternatively, you can assign a fixed (static) IP address to the telephone. However, you must ensure that this IP address is not within the address range reserved for DHCP and is not assigned to any other LAN subscriber.

VoIP status codes

In the following tables you will find the meaning of the most important VoIP status codes and messages.

Status code	Meaning
0x31	IP configuration error: IP domain not entered.
0x33	IP configuration error: SIP user name (User ID) not entered. This is shown, for example, when dialling with a line suffix, if no connection is configured for the suffix on the base.
0x34	IP configuration error: SIP password (Password) not entered.
0x300	The called party can be reached under multiple phone numbers. If the VoIP provider supports this, a list of the phone numbers is transmitted as well as the status code. The caller can select the number to which he wants to make the connection.
0x301	Permanently diverted. The called party can no longer be reached under this number. The new number is transferred to the phone together with the status code, and the phone then no longer accesses the old number but dials the new address immediately.
0x302	Temporarily diverted. The phone is informed that the called party cannot be reached under the dialled number. The call is diverted for a limited period. The phone is also notified of the length of the diversion.
0x305	The query is sent to a different "proxy server", e.g., to balance incoming queries. The phone will make the same query once again to another proxy server. This is not a redirection of the address per se.
0x380	Other service: The query or call could not be transferred. However, the phone is notified of other options available to connect the call.
0x400	Wrong call
0x401	Not authorised
0x403	The requested service is not supported by the VoIP provider.
0x404	Wrong phone number. No connection on this number. Example: While making a local call you have not dialled the area code although your VoIP provider does not support local calls.
0x405	Method not permitted.
0x406	Not acceptable. The requested service cannot be provided.
0x407	Proxy authentication required.
0x408	The party cannot be reached (e.g., account has been deleted).
0x410	The requested service is not available from the VoIP provider.
0x413	Message is too long.

Customer service & product warranty – Australia and New Zealand

Status code	Meaning
0x414	URI is too long.
0x415	Query format is not supported.
0x416	URI is faulty.
0x420	Incorrect ending
0x421	Incorrect ending
0x423	The requested service is not supported by the VoIP provider.
0x480	The dialled number is temporarily unavailable.
0x481	The recipient is not available.
0x482	Double service query
0x483	Too many "jumps": The query was rejected because the service server (proxy) has decided that this query has already passed through too many service servers. The maximum number is defined beforehand by the original sender of the query.
0x484	Wrong number: In most cases this response means that you have simply omitted one or more digits in the phone number.
0x485	The URI dialled is not unique and cannot be processed by the VoIP provider.
0x486	The called party is busy.
0x487	General faults: The call was cancelled before a call was established. The status code confirms receipt of the interruption signal.
0x488	The server cannot process the query because the data entered in the media description is not compatible.
0x491	The server notifies that the query will be processed as soon as a previous query has been completed.
0x493	The server rejects the query because the phone cannot decrypt the message. The sender has used an encryption method that either the server or the receiver phone cannot decrypt.
0x500	The proxy or the receiving device has discovered a fault while executing the query. It is therefore impossible to execute the query. If this occurs, the caller or the phone displays the fault and repeats the query after a few seconds. The number of seconds after which the query can be repeated may be transmitted to the caller or phone by the receiving device.
0x501	The query cannot be processed by the recipient because the recipient does not have the functionality that the caller requires. If the recipient understands the query but does not process it because the sender does not have the necessary rights or the query is not permitted in the current context, status code 405 is transmitted instead of 501.
0x502	In this case, the receiving device that transmits this error code is a proxy or a gateway and has received an invalid response from its gateway via which this query is to be processed.

Customer service & product warranty – Australia and New Zealand

Status code	Meaning
0x503	The query cannot be processed by the receiving device or the proxy at present because the server is either overloaded or is being serviced. If it is possible for the query to be repeated in the foreseeable future, the server informs the caller or the phone of this.
0x504	Time limit exceeded at the gateway.
0x505	The server rejects the query because the indicated version number of the SIP protocol does not concur with at least the version that is used by the server or SIP device involved in this query.
0x515	The server rejects the query because the message exceeds the maximum permitted size.
0x600	The called party is busy.
0x603	The called party has rejected the call.
0x604	The called URI does not exist.
0x606	The communication settings are not acceptable.
0x701	The called party has hung up.
0x703	Connection cancelled because of timeout.
0x704	Connection interrupted because of a SIP error.
0x705	Wrong dialling tone
0x706	No connection established
0x751	Busy tone: No codec match between the calling and called party.
0x810	General socket layer error: User is not authorised.
0x811	General socket layer error: Wrong socket number
0x812	General socket layer error: Socket is not connected.
0x813	General socket layer error: Memory error
0x814	General socket layer error: Socket not available – check IP settings/connection problem/VoIP setting incorrect.
0x815	General socket layer error: Illegal application on the socket interface.

Checking service information

If you contact Customer Services, you may need the base's service information.

Prerequisite: you have assigned an outside line (try to establish an external call, make an external call).

Please note

You may need to wait a few seconds before **Options** appears on the display

Options → Service Info

Confirm selection with **OK**.

You can select the following information/functions with :

- 1: Serial number of the base (RFPI)
- 2: Not in use: - - -
- 3: Informs the service employees of the base settings (in hex diagram), e.g., the number of registered handsets, repeater mode.
- 4: Variant (digits 1 to 2),
Version of the phone's firmware (digits 3 to 5).
- 5: Gigaset.net number of your phone. A service employee can use this number to call you over the Internet without you needing to be registered with a VoIP provider. This means that the employee can test online connections and VoIP telephony regardless of the VoIP provider.
- 6: Device number of the base. This contains additional information for the service employee.

Unlock system

(only if the device has been locked by the provider)

Confirm selection with **OK**.

If necessary you can unlock a provider-specific device lock with a corresponding code.

Update profile

Confirm selection with **OK**.

Your current VoIP provider profiles (general provider data for all configured VoIP connections) are automatically loaded onto your phone. The general settings for all VoIP connections for which profiles are available on the Internet are updated.

Send config.

Select this option only if you are requested to do so by the Service employee.

Environment

Our environmental mission statement

We, Gigaset Communications GmbH, bear social responsibility and are actively committed to a better world. Our ideas, technologies and actions serve people, society and the environment. The aim of our global activity is to secure sustainable life resources for humanity. We are committed to a responsibility for our products that comprises their entire life cycle. The environmental impact of products, including their manufacture, procurement, distribution, utilisation, service and disposal, are already evaluated during product and process design.

Further information on environmentally friendly products and processes is available on the Internet at www.gigaset.com.

Environmental management system

Gigaset Communications GmbH is certified pursuant to the international standards ISO 14001 and ISO 9001.

ISO 14001 (Environment): Certified since September 2007 by TÜV SÜD Management Service GmbH.

ISO 9001 (Quality): Certified since 17/02/1994 by TÜV SÜD Management Service GmbH.

Disposal

Batteries should not be disposed of in general household waste. Observe the local waste disposal regulations, details of which can be obtained from your local authority or the dealer you purchased the product from.

All electrical and electronic equipment must be disposed of separately from general household waste using the sites designated by local authorities.

The appropriate disposal and separate collection of used equipment serve to prevent potential harm to the environment and to health. They are a precondition for the re-use and recycling of used electrical and electronic equipment.

For further information on disposing of your used equipment, please contact your local authority or your refuse collection service.

Appendix

Care

Wipe the base station, charging cradle and handset with a **damp** cloth (do not use solvent) or an antistatic cloth.

Never use a dry cloth. This can cause static.

Impairments in high-gloss finishes can be carefully removed using display polishes for mobile phones.

Contact with liquid

If the handset has come into contact with liquid:

- 1 **Switch off the handset and remove the battery pack immediately.**
- 2 Allow the liquid to drain from the handset.
- 3 Pat all parts dry, then place the handset with the battery compartment open and the keypad facing down in a dry, warm place **for at least 72 hours** (not in a microwave, oven etc.).
- 4 **Do not switch on the handset again until it is completely dry.**

When it has fully dried out, you will normally be able to use it again.

Specifications

Technology:

Nickel-metal-hydride (NiMH)

Size: AAA (Micro, HR03)

Voltage: 1.2 V

Capacity: 550 – 1000 mAh

We recommend the following battery types, because these are the only ones that guarantee the specified operating times, full functionality and long service life:

- ◆ Yuasa AAA 800 mAh

The device is supplied with two approved batteries.

Handset operating times/charging times

The operating time of your Gigaset depends on the capacity and age of the batteries and the way it is used. (All times are maximum possible times).

	Capacity (mAh) approx.			
	550	700	800	1000
Standby time (hours)*	160/48	185/56	210/64	260/79
Talktime (hours)	10	12	13	17
Operating time for 1.5 hours of calls per day (hours)**	85	100	115	140
Charging time in base (hours)	7,5	8,5	10	12
Charging time in charger (hours)	6,5	7,5	8,5	10,5

* Without/with display backlight

** Without display backlight

([Setting the display backlight](#) → [page 155](#))

Due to the constant progression in battery development, the list of recommended batteries in the FAQ section of the Gigaset Customer Care pages is updated regularly:

www.gigaset.com/customer-care

Base power consumption

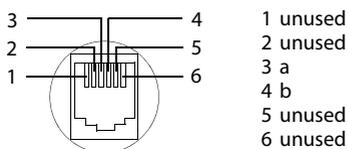

In standby mode: approx. 1.2 W

During a call: approx 1.3 W

General specifications

Interfaces	Analogue fixed line, Ethernet
DECT standard	Supported
GAP standard	Supported
No. of channels	60 duplex channels
Radio frequency range	1880–1900 MHz
Duplex method	Time multiplex, 10 ms frame length
Repeat frequency of the transmission pulse	100 Hz
Length of the transmission pulse	370 μ s
Channel grid	1728 kHz
Bit rate	1152 kbit/s
Modulation	GFSK
Language code	32 kbit/s
Transmission power	10 mW, average power per channel 250 mW pulse power
Range	up to 300 m outdoors, up to 50 m indoors
Power supply	230 V ~/50 Hz
Environmental conditions for operation	+5°C to +45°C 20% to 75% relative humidity
Dialling mode	DTMF (tone dialling)
Codec	G.711, G.726, G.729AB with VAD/CNG, G.722
Quality of Service	TOS, DiffServ
Protocols	SIP, RTP, DHCP, NAT Traversal (STUN), HTTP

Pin connections on the fixed line telephone jack

Writing and editing text

The following rules apply when writing text:

- ◆ Each key between **[0+]** and **[9WXYZ]** is assigned several letters and characters.
- ◆ Control the cursor with **[←]** **[→]** **[↶]** **[↷]**. Press and **hold** **[←]** or **[→]** to move the cursor **word by word**.
- ◆ Characters are inserted to the left of the cursor.
- ◆ Press the star key **[* Δ]** to display the table of special characters. Select the required character and press the display key **[Insert]** to insert the character at the cursor position.
- ◆ Press and **hold** **[0+]** to **[9WXYZ]** to enter digits.
- ◆ Press display key **[<C]** to delete the **character** to the left of the cursor. Press and **hold** to delete the **word** to the left of the cursor.
- ◆ The first letter of the name of directory entries is automatically capitalised, followed by lower case letters.

Setting upper/lower case or digits

Repeatedly press the hash key **[↵#]** to change the text input mode.

123	Digits
Abc	Upper case (first letter in capitals, all others in lower case)
abc	Lower case

The active mode is indicated at the bottom right of the screen.

Writing an SMS/names

Press the relevant key several times to enter letters/characters.

- ▶ Enter the individual letters/characters by pressing the corresponding key.

The characters assigned to the key are shown in a selection line at the bottom left of the screen. The selected character is highlighted.

- ▶ **Briefly** press the key several times in succession to select the required letter/character.

If you press and **hold** the key, the corresponding digit is inserted.

Standard characters

	1x	2x	3x	4x	5x	6x	7x	8x	9x	10x
1 <small>oo</small>	1									
2 <small>ABC</small>	a	b	c	2	ä	á	à	â	ã	ç

1) Space

2) Line break

Glossary

A

ADSL

Asymmetric Digital Subscriber Line

Special form of **DSL**.

ALG

Application Layer Gateway

NAT control mechanism of a router.

Many routers with integrated NAT use ALG. ALG lets the data packets in a VoIP connection pass and adds the public IP address of the secure private network.

The router's ALG should be deactivated if the VoIP provider offers a STUN server or an outbound proxy.

See also: **Firewall**, **NAT**, **Outbound proxy**, **STUN**.

Authentication

Restriction of access to a network/service by using an ID and password to log in.

Automatic ringback

See **Ringback when the number is busy**.

B

Block dialling

Enter the complete phone number, and correct it if necessary. Then pick up the earpiece or press the talk/speaker key to dial the phone number.

Broadband Internet access

See **DSL**.

C

Call divert

CD

Automatic diversion (CD) of a call to a different telephone number. There are three kinds of call divert:

- CDU, Call Divert Unconditional
- CDB, Call Divert Busy
- CDNR, Call Divert No Reply

Call swapping

Call swapping allows you to switch between two callers or between a conference and an individual caller without allowing the waiting caller to listen to the call.

Call waiting

CW

Network provider feature. A beep during a call indicates that another caller is waiting. You can accept or reject the second call. You can activate/deactivate the feature.

CF

Call Forwarding

See **Call divert**.

Client

Application that requests a service from a server.

Codec

Coder/decoder

Codec is a procedure that digitalises and compresses analogue voice before it is sent via the Internet, and decodes – i.e., translates into analogue voice – digital data when voice packets are received. There are different codecs, with differing degrees of compression, for instance.

Both parties involved in the telephone connection (caller/sender and recipient) must use the same codec. This is negotiated between the sender and the recipient when establishing a connection.

The choice of codec is a compromise between voice quality, transmission speed and the necessary bandwidth. A high level of compression, for example, means that the bandwidth required for each voice connection is low. However, it also means that the time needed to compress/decompress the data is greater, which increases execution time for data in the network and thus impairs voice quality. The time required increases the delay between the sender speaking and the recipient hearing what has been said.

COLP / COLR

Connected Line Identification Presentation/Restriction

Feature provided by a VoIP/ISDN connection for outgoing calls.

COLP displays the phone number accepting the call on the calling party's display unit.

The number of the party accepting the call is different to the dialled number, e.g., if the call is diverted or transferred.

The called party can use COLR (Connected Line Identification Restriction) to prevent the number from appearing on the calling party's display.

Consultation call

You are on a call. With a consultation call, you interrupt the conversation briefly to establish a second connection to another participant. If you end the connection to this participant immediately, then this was a consultation call. If you switch between the first and second participant, it is called **Call swapping**.

D**DHCP**

Dynamic Host Configuration Protocol

Internet protocol that handles the automatic assignment of **IP addresses** to **Network subscriber**. The protocol is made available in the network by a server. A DHCP server can, for example, be a router.

The phone contains a DHCP client. A router that contains a DHCP server can assign the IP addresses for the phone automatically from a defined address block. The dynamic assignment means that several **Network subscribers** can share one IP address, although they can only use it alternately and not simultaneously.

With some routers you can specify that the IP address for the phone is never changed.

Displayed name

VoIP provider feature. You can specify any name that is to be shown to the other party during a call instead of your phone number.

DMZ (Demilitarised Zone)

DMZ describes a part of a network that is outside the firewall.

A DMZ is set up, as it were, between a network you want to protect (e.g., a LAN) and a non-secure network (e.g., the Internet). A DMZ permits unrestricted access from the Internet to only one or a few network components, while the other network components remain secure behind the firewall.

DNS

Domain Name System

Hierarchical system that permits the assignment of **IP addresses** to **Domain names** that are easier to memorise. This assignment has to be managed by a local DNS server in each (W)LAN. The local DNS server determines the IP address, if necessary by enquiring about superordinate DNS servers and other local DNS servers on the Internet.

You can specify the IP address of the primary/secondary DNS server.

See also: **DynDNS**.

Domain name

Name of one (of several) web server(s) on the Internet (e.g., Gigaset.net). The domain name is assigned to the relevant IP address by DNS.

DSCP

Differentiated Service Code Point

See **Quality of Service (QoS)**.

DSL

Digital Subscriber Line

Data transfer technology that allows Internet access with e.g., **1.5 Mbps** over a conventional telephone line. Prerequisites: DSL modem and the appropriate service offered by the Internet provider.

DSLAM

Digital Subscriber Line Access Multiplexer

The DSLAM is a switch cabinet in an exchange at which all subscriber connectors converge.

Glossary

DTMF

Dual Tone Multi-Frequency

Another description for dual tone multi-frequency dialling (DTMF).

Dynamic IP address

A dynamic IP address is assigned to a network component automatically via **DHCP**. The dynamic IP address for a network component can change every time it registers or at certain time intervals.

See also: **Fixed IP address**

DynDNS

Dynamic DNS

Domain names and IP addresses are assigned via **DNS**. For **Dynamic IP addresses** this service is enhanced with "Dynamic DNS". This permits the use of a network component with a dynamic IP address as a **Server** on the **Internet**. DynDNS ensures that a service can always be addressed on the Internet under the same **Domain name**, regardless of the current IP address.

E

ECT

Explicit Call Transfer

Participant A calls participant B. The participant puts the connection on hold and calls participant C. Rather than connect everyone in a three-party conference, A now transfers participant B to C and hangs up.

EEPROM

Electrically Erasable Programmable Read Only Memory

Memory building block in your phone with fixed data (e.g., default and customised settings) and data saved automatically (e.g., call list entries).

Ethernet network

Wired **LAN**.

F

Firewall

You can use a firewall to protect your network against unauthorised external access. This involves combining various measures and technologies (hardware and/or software) to control the flow of data between a private network you wish to protect and an unprotected network (e.g., the Internet).

See also: **NAT**.

Firmware

Device software in which basic information is saved for the functioning of a device. To correct errors or update the device software, a new version of the firmware can be loaded into the device's memory (firmware update).

Fixed IP address

A fixed IP address is assigned to a network component manually during network configuration. Unlike the **Dynamic IP address**, a fixed IP address does not change.

Flat rate

Billing system for an **Internet** connection. The Internet provider charges a set monthly fee. There are no additional charges for the duration of the connection or number of connections.

Fragmentation

Data packets that are too big are split into smaller packets (fragments) before they are transferred. They are put together again when they reach the recipient (defragmented).

Full duplex

Data transmission mode in which data can be sent and received at the same time.

G

G.711 a law, G.711 μ law

Standard for a **Codec**.

G.711 delivers a very good voice quality that corresponds to that in the ISDN network. As there is little compression, the necessary bandwidth is around 64 kbit/s per voice connection, but the delay caused by coding/decoding is only approx. 0.125 ms.

"a law" describes the European standard and " μ law" describes the North American/Japanese equivalent.

G.722

Standard for a **Codec**.

G.722 is a **broadband** language codec with a bandwidth of 50 Hz to 7 kHz, a net transmission rate of 64 kbit/s per voice connection and integrated speech pause recognition and comfort noise generation (silence suppression).

G.722 delivers very good voice quality. A higher sampling rate provides clearer and better voice quality than other codecs and enables a speech tone in High Definition Sound Performance (HDSP).

G.726

Standard for a **Codec**.

G.726 delivers a good voice quality. It is inferior to the quality with codec **G.711** but better than with **G.729**.

G.729A/B

Standard for a **Codec**.

The voice quality is more likely to be lower with G.729A/B. As a result of the high level of compression, the necessary bandwidth is only around 8 kbit/s per voice connection, but the delay is around 15 ms.

Gateway

Connects two different **Networks**, e.g., a router as an Internet gateway.

For phone calls from **VoIP** to the telephone network, a gateway has to be connected to the IP network and the telephone network (gateway/VoIP provider). It forwards calls from VoIP to the telephone network as required.

Gateway provider

See **SIP provider**.

Global IP address

See **IP address**.

GSM

Global System for Mobile Communication

Originally, a European standard for mobile networks. GSM can now be described as a worldwide standard. However, in the USA and Japan, national standards were previously more frequently supported.

H

Headset

Combination of microphone and headphone. A headset enables a comfortable speaker mode. Headsets that can be connected to the base via a cable (wire-bound) or via Bluetooth (wireless) are available.

HTTP Proxy

Server via which the **Network subscribers** can process their Internet traffic.

Hub

Uses one **Infrastructure network** to connect several **Network subscribers**. All data sent to the hub by one network subscriber is forwarded to all network subscribers.

See also: **Gateway**, **Router**.

I

IEEE

Institute of Electrical and Electronics Engineers
International body that defines standards in electronics and electrical engineering, concerned in particular with the standardisation of LAN technology, transmission protocols, data transfer rate and wiring.

Infrastructure network

Network with central structure: All **Network subscribers** communicate via a central **Router**.

Internet

Global **WAN**. A series of protocols known as TCP/IP have been defined for exchanging data.

Every **Network subscriber** is identifiable via their **IP address**. **DNS** assigns a **Domain name** to the **IP address**.

Important services on the Internet include the World Wide Web (WWW), e-mail, file transfer and discussion forums.

Internet Service Provider

Enables access to the Internet for a fee.

IP (Internet Protocol)

TCP/IP protocol on the **Internet**. IP is responsible for addressing subscribers in a **Network** using **IP addresses** and routes data from the sender to the recipient. IP determines the paths (routing) along which the data packets travel.

IP address

A unique address for a network component within a network based on the TCP/IP protocols (e.g., LAN, Internet). On the **Internet**, domain names are usually assigned instead of IP addresses. **DNS** assigns the corresponding IP address to the domain name.

The IP address has four parts (decimal numbers between 0 and 255) separated by full stops (e.g., 230.94.233.2).

The IP address is made up of the network number and the number of the **Network subscriber** (e.g., phone). Depending on the **Subnet mask**, the first one, two or three parts make up the network number and the rest of the IP address addresses the network component. The network number of all the components in any one network must be identical.

IP addresses can be assigned automatically with DHCP (dynamic IP addresses) or manually (static IP addresses).

See also: **DHCP**.

IP pool range

Range of IP addresses that the DHCP server can use to assign dynamic IP addresses.

L

LAN

Local Area Network

Network with a restricted physical range. A LAN can be wireless (WLAN) and/or wired.

Local IP address

The local or private IP address is the address for a network component in the local network (LAN). The network operator can assign any address he or she wants. Devices that act as a link from a local network to the Internet (gateway or router) have a public and a private IP address.

See also **IP address**.

Local SIP port

See **SIP port / local SIP port**.

M**MAC address**

Media Access Control address

Hardware address by means of which each network device (e.g., network card, switch, phone) can be uniquely identified worldwide. It consists of six parts (hexadecimal numbers) separated by "-" (e.g., 00-90-65-44-00-3A).

The MAC address is assigned by the manufacturer and cannot be changed.

Mbps

Million bits per second

Unit of the transmission speed in a network.

MRU

Maximum Receive Unit

Defines the maximum user data volume within a data packet.

MTU

Maximum Transmission Unit

Defines the maximum length of a data packet that can be carried over the network at a time.

Music on hold

Music that is played while you are on a **Consultation call** or during **Call swapping**. The waiting participant hears music while on hold.

N**NAT**

Network Address Translation

Method for converting (private) **IP addresses** to one or more (public) **IP addresses**. NAT enables the IP addresses of **Network subscribers** (e.g., VoIP telephones) in a **LAN** to be concealed behind a shared IP address for the **Router** on the **Internet**.

VoIP telephones behind a NAT router cannot be reached by VoIP servers (on account of the private IP address). To "get around" NAT, it is possible to use either **ALG** in the router, **STUN** in the VoIP telephone, or for the VoIP provider to use an **Outbound proxy**.

If an outbound proxy is made available, you must allow for this in the VoIP settings for your phone.

Network

Group of devices. Devices can be connected in either wired or wireless mode.

Networks can also differ in range and structure:

- Range: Local networks (**LAN**) or wide-area networks (**WAN**)
- Structure: **Infrastructure network** or ad-hoc network

Network subscriber

Devices and PCs that are connected to each other in a network e.g., servers, PCs and phones.

O**Outbound proxy**

Alternative NAT control mechanism to STUN and ALG.

Outbound proxies are implemented by the VoIP provider in firewall/NAT environments as an alternative to **SIP proxy server**. They control data traffic through the firewall.

Outbound proxy and STUN servers should not be used simultaneously.

See also: **STUN** and **NAT**.

Glossary

P

Paging (handset search)

Base function for locating the registered handsets. The base establishes a connection to every registered handset. The handsets start to ring.

PIN

Personal Identification Number

Protects against unauthorised use. When the PIN is activated, a number combination has to be entered to access a protected area.

You can protect your base configuration data with a system PIN (4-digit number combination).

Port

Data is exchanged between two applications in a **Network** via a port.

Port forwarding

The Internet gateway (e.g., your router) forwards data packets from the **Internet** that are directed to a certain **Port** to the port concerned. This allows servers in the **LAN** to offer services on the Internet without you needing a public IP address.

Port number

Indicates a specific application of a **Network subscriber**. Depending on the setting in the **LAN**, the port number is permanently assigned or it is assigned with each access.

The combination of **IP address / Port** number uniquely identifies the recipient or sender of a data packet within a network.

Pre-dialling

See **Block dialling**.

Private IP address

See **Public IP address**.

Protocol

Describes the agreements for communicating within a **Network**. It contains rules for opening, administering and closing a connection, about data formats, time frames and possible error handling.

Proxy / Proxy server

Computer program that controls the exchange of data between **Client** and **Server** in computer networks. If the phone sends a query to the VoIP server, the proxy acts as a server towards the phone and as a client towards the server. A proxy is addressed via **IP address / Domain name** and **Port**.

Public IP address

The public IP address is the address for a network component on the Internet. It is assigned by the Internet Service Provider. Devices that act as a link from a local network to the Internet (gateway, router) have a public and a local IP address.

See also: **IP address, NAT**

Q

Quality of Service (QoS)

Describes the quality of service in communication networks. Differentiations are made between various quality of service classes.

QoS influences the flow of data packets on the Internet e.g., by prioritising data packets, reserving bandwidth and optimising data packets.

In VoIP networks, QoS influences the voice quality. If the whole infrastructure (router, network server etc.) has QoS, the voice quality is better, i.e., fewer delays, less echoing, less crackling.

R**RAM**

Random Access Memory

Memory in which you have reading and storage rights. Items such as melodies and logos are saved in the RAM after you have loaded them onto the phone via the Web configurator.

Registrar

The registrar manages the current IP addresses of the **Network subscriber**. When you register with your VoIP provider, your current IP address is saved on the registrar. This means you can also be reached when on the move.

Ringback when the call is not answered

= CCNR (Completion of calls on no reply). If a party does not reply when called, a caller can arrange an automatic ringback. As soon as the destination phone has completed a call and is free again, the caller is called back. This feature must be supported by the exchange. The ringback request is automatically cancelled after about two hours (depending on the network provider).

Ringback when the number is busy

= CCBS (Completion of calls to busy subscriber). If a caller hears the busy tone, he or she can activate the ringback function. As soon as the connection is free, the caller is called back. As soon as the caller lifts the earpiece, the connection is made automatically.

ROM

Read Only Memory

A type of memory that can only be read.

Router

Routes data packets within a network and between different networks via the quickest route. Can connect **Ethernet networks** and WLAN. Can be a **Gateway** to the Internet.

Routing

Routing is the transfer of data packets to another subscriber in your network. On their way to the recipient, the data packets are sent from one router to the next until they reach their destination.

If data packets were not forwarded in this way, a network like the Internet would not be possible. Routing connects the individual networks to this global system.

A router is a part of this system; it transfers data packets both within a local network and from one network to the next. Transfer of data from one network to another is performed on the basis of a common protocol.

RTP

Real-Time Transport Protocol

Global standard for transferring audio and video data. Often used in conjunction with UDP. In this case, RTP packets are embedded in UDP packets.

RTP port

(Local) **Port** that is used to send and receive voice data packets for VoIP.

Glossary

S

Server

Provides a service to other **Network subscribers (Clients)**. The term can indicate a computer/PC or an application. A server is addressed via **IP address / Domain name** and **Port**.

SIP (Session Initiation Protocol)

Signalling protocol independent of voice communication. Used for establishing and ending a call. It is also possible to define parameters for voice transmission.

SIP address

See **URI**.

SIP port / local SIP port

(Local) **Port** that is used to send and receive SIP signalling data for VoIP.

SIP provider

See **VoIP provider**.

SIP proxy server

IP address of your VoIP provider's gateway server.

Static IP address

See **Fixed IP address**.

STUN

Simple Transversal of UDP over NAT
NAT control mechanism.

STUN is a data protocol for VoIP telephones. STUN replaces the private IP address in the VoIP telephone data packets with the public address of the secure private network. To control data transfer, a STUN server is also required on the Internet. STUN cannot be implemented with symmetric NATs.

See also: **ALG, Firewall, NAT, Outbound proxy**.

Subnet

Segment of a **Network**.

Subnet mask

IP addresses consist of a fixed line number and a variable subscriber number. The network number is identical for all **Network subscribers**. The size of the network number part is determined in the subnet mask. In the subnet mask 255.255.255.0, for example, the first three parts of the IP address are the network number and the last part is the subscriber number.

Symmetric NAT

A symmetric NAT assigns different external IP addresses and port numbers to the same internal IP addresses and port numbers – depending on the external target address.

T

TCP

Transmission Control Protocol

Transport protocol. Session-based transmission protocol: it sets up, monitors and terminates a connection between sender and recipient for transporting data.

TLS

Transport Layer Security

Protocol for encrypting data transmissions on the Internet. TLS is a superordinated **Transport protocol**.

Transmission rate

Speed at which data is transmitted in the **WAN** or **LAN**. The transmission rate is measured in data units per unit of time (Mbit/s).

Transport protocol

Controls data transport between two communication partners (applications).

See also: **UDP, TCP, TLS**.

U**UDP**

User Datagram Protocol

Transport protocol. Unlike **TCP**, **UDP** is a non session-based protocol. UDP does not establish a fixed connection. The data packets ("datagrams") are sent as a broadcast. The recipient is solely responsible for making sure the data is received. The sender is not notified about whether it is received or not.

URI

Uniform Resource Identifier

Character string for identifying resources (e.g., e-mail recipient, <http://gigaset.com>, files).

On the **Internet**, URIs are used as a uniform identification for resources. URIs are also described as SIP addresses.

URIs can be entered in the phone as a number. By dialling a URI, you can call an Internet subscriber with VoIP equipment.

URL

Universal Resource Locator

Globally unique address of a domain on the **Internet**.

A URL is a subtype of the **URI**. URLs identify a resource by its location on the **Internet**. For historical reasons the term is often used as a synonym for URI.

User ID

See **User name**.

User name

Name/number combination for access e.g., to your VoIP account or your private address directory on the Internet.

V**Voice codec**

See **Codec**.

VoIP

Voice over Internet Protocol

Telephone calls are no longer placed and transmitted over the telephone network but over the **Internet** (or other IP networks).

VoIP provider

A VoIP, SIP or **Gateway provider** is an Internet service provider that provides a **Gateway** for Internet telephony. As the phone works with the SIP standard, your provider must support the SIP standard.

The provider routes calls from VoIP to the telephone network (analogue, ISDN and mobile) and vice versa.

W**WAN**

Wide Area Network

Wide-area network that is unrestricted in terms of area (e.g., **Internet**).

Accessories

Gigaset handsets

Upgrade your Gigaset to a cordless PABX:

Gigaset SL400H handset

- ◆ Genuine metal frame and keypad
- ◆ High-quality keypad illumination
- ◆ 1.8" TFT colour display
- ◆ Bluetooth® and mini USB
- ◆ Directory for up to 500 vCards
- ◆ Talk/standby time of up to 14 h/230 h
- ◆ Large font for call lists and directory
- ◆ Brilliant sound quality in speaker mode:
4 speaker settings
- ◆ Caller pictures, slideshow and screensaver
(analogue and digital clock)
- ◆ Silent alert, download ringtone melodies
- ◆ ECO DECT
- ◆ Alarm clock
- ◆ Calendar with appointment scheduler
- ◆ Night mode with time-controlled ringtone deactivation
- ◆ No interruptions from anonymous calls
- ◆ Room monitor (Babyphone), One Touch Call
- ◆ SMS with up to 640 characters

www.gigaset.com/gigaset-sl400H

Gigaset S810H handset

- ◆ Brilliant sound quality in handsfree mode
- ◆ High-quality genuine metal keypad with illumination
- ◆ Plus/minus key for simple volume control
- ◆ 1.8" TFT colour display
- ◆ Bluetooth® and mini USB
- ◆ Directory for up to 500 vCards
- ◆ Talk/standby time of up to 13h/180h, standard batteries
- ◆ Large font for call lists and directory
- ◆ Brilliant sound quality in handsfree mode: 4 handsfree settings
- ◆ Caller pictures, screensaver (analogue and digital clock)
- ◆ Download ringtones
- ◆ ECO DECT
- ◆ Alarm clock
- ◆ Calendar with appointment scheduler
- ◆ Night mode with time-controlled ringtone deactivation
- ◆ No interruptions from unknown calls
- ◆ Room monitor (Babyphone), One Touch Call
- ◆ SMS with up to 640 characters

www.gigaset.com/gigaset810h

Gigaset C610H handset

- ◆ Social life management with room monitor and birthday reminders, One Touch Call
- ◆ Individual programming of ringtones with 6 VIP groups
- ◆ High-quality keypad with illumination
- ◆ 1.8" TFT colour display
- ◆ Directory for up to 150 vCards
- ◆ Talk/standby time of up to 12 h/180 h, standard batteries
- ◆ Large font for call lists and directory
- ◆ Brilliant sound quality in speaker mode
- ◆ Screensaver (digital clock)
- ◆ ECO DECT
- ◆ Alarm clock
- ◆ Night mode with time-controlled ringtone deactivation
- ◆ No interruptions from anonymous calls
- ◆ Room monitor (Babyphone)
- ◆ SMS with up to 640 characters

www.gigaset.com/gigasetc610h

Gigaset SL78H handset

- ◆ Real metal frame
- ◆ Modern keypad with high-quality illumination
- ◆ 2.2" TFT QVGA colour display
- ◆ Bluetooth® and mini USB
- ◆ Directory for up to 500 vCards
- ◆ Talk/standby time of up to 14h/200h
- ◆ Brilliant sound quality in handsfree mode
- ◆ Caller pictures, slide show and screensaver (analogue and digital clock)
- ◆ Download ringtones
- ◆ ECO DECT
- ◆ Alarm clock
- ◆ Calendar with appointment scheduler
- ◆ Night mode with time-controlled ringtone deactivation
- ◆ Room monitor (Babyphone)
- ◆ SMS with up to 640 characters

www.gigaset.com/gigaset-sl78h

Gigaset E49H handset

- ◆ Resistant to shocks, dust and water splashes
- ◆ Hardy illuminated keypad
- ◆ Colour display
- ◆ Directory for 150 entries
- ◆ Talk/standby time of up to 12 h/250 h, standard batteries
- ◆ Brilliant sound quality in speaker mode
- ◆ Screensaver
- ◆ ECO DECT
- ◆ Alarm clock
- ◆ Room monitor (Babyphone)
- ◆ SMS with up to 640 characters

www.gigaset.com/gigaset-e49h

L410 handsfree clip for cordless phones

- ◆ Move during a call without any restrictions
- ◆ Handy clip belt
- ◆ Brilliant sound quality in speaker mode
- ◆ Weight approx. 30 g
- ◆ ECO-DECT
- ◆ Five different volume levels
- ◆ Status indication via LED
- ◆ Talk/standby time of up to 5 hrs/120 hrs
- ◆ Range of up to 50 m indoors and up to 300 m outdoors

www.gigaset.com/gigasetl410

Gigaset repeater

You can use the Gigaset repeater to increase the reception range between your Gigaset handset and the base.

www.gigaset.com/gigasetrepeater

All accessories and batteries are available from your phone retailer.

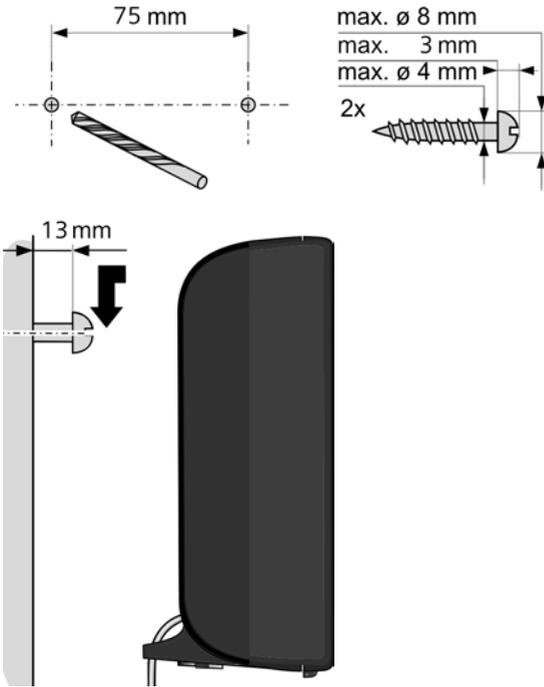

Use only original accessories. This will avoid possible health risks and personal injury, and also ensure that all the relevant regulations are complied with.

Compatibility

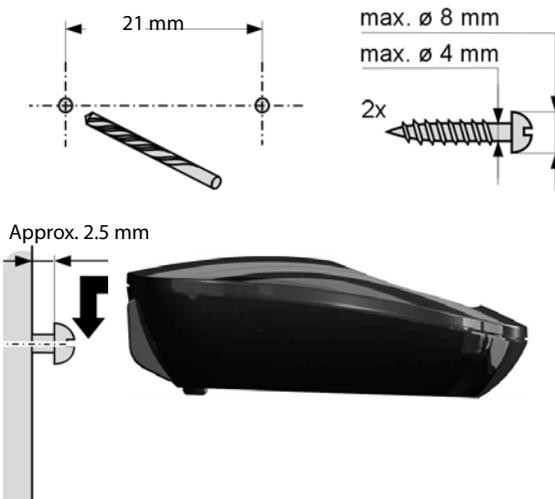

For more information on handset functions in relation to Gigaset bases, please visit:

www.gigaset.com/compatibility
