Limited Lifetime Warranty

Connect Tech Inc. provides a Lifetime Warranty for all Connect Tech Inc. products. Should this product, in Connect Tech Inc.'s opinion, fail to be in good working order during the warranty period, Connect Tech Inc. will, at its option, repair or replace this product at no charge, provided that the product has not been subjected to abuse, misuse, accident, disaster or non Connect Tech Inc. authorized modification or repair.

You may obtain warranty service by delivering this product to an authorized Connect Tech Inc. business partner or to Connect Tech Inc. along with proof of purchase. Product returned to Connect Tech Inc. must be pre-authorized by Connect Tech Inc. with an RMA (Return Material Authorization) number marked on the outside of the package and sent prepaid, insured and packaged for safe shipment. Connect Tech Inc. will return this product by prepaid ground shipment service.

The Connect Tech Inc. Lifetime Warranty is defined as the serviceable life of the product. This is defined as the period during which all components are available. Should the product prove to be irreparable, Connect Tech Inc. reserves the right to substitute an equivalent product if available or to retract Life Time Warranty if no replacement is available.

The above warranty is the only warranty authorized by Connect Tech Inc. Under no circumstances will Connect Tech Inc. be liable in any way for any damages, including any lost profits, lost savings or other incidental or consequential damages arising out of the use of, or inability to use, such product.

Customer Support Overview

If you experience difficulties after reading the manual and/or using the product, contact the Connect Tech reseller from which you purchased the product. In most cases the reseller can help you with product installation and difficulties.

In the event that the reseller is unable to resolve your problem, our highly qualified support staff can assist you. Our support section is available 24 hours a day, 7 days a week on our website at: www.connecttech.com/sub/support/support.asp. See the contact information section below for more information on how to contact us directly. Our technical support is always free.

Contact Information

We offer three ways for you to contact us:

Mail/Courier
You may contact us by letter at:
Connect Tech Inc.
Technical Support
42 Arrow Road
Guelph, Ontario
Canada N1K 1S6

Email/Internet
You may contact us through the Internet. Our email and URL addresses on the Internet are:

sales@connecttech.com
support@connecttech.com
www.connecttech.com

> **Note:**
> Please go to the **Download Zone** or the **Knowledge Database** in the **Support Center** on the Connect Tech website for product manuals, installation guides, device driver software and technical tips.
> Submit your technical support questions to our customer support engineers via the **Support Center** on the Connect Tech website.

Telephone/Facsimile
Technical Support representatives are ready to answer your call Monday through Friday, from 8:30 a.m. to 5:00 p.m. Eastern Standard Time. Our numbers for calls are:

Telephone: 800-426-8979 (North America only)
 Telephone: 519-836-1291 (Live assistance available 8:30 a.m. to 5:00 p.m. EST, Monday to Friday)
Facsimile: 519-836-4878 (on-line 24 hours)

Introduction

Connect Tech Inc. presents BlueStorm/LP/SP/SP Opto and SP RJ-11. These high-speed multi-port communication adapters are designed for Low Profile (LP) and Standard Profile (SP) PCI compatible computers. BlueStorm cards provide you with up to eight high performance serial ports and baud rates up to 1.8432 Mbps that are compatible with any standard serial communications application.

BlueStorm cards are fully PCI compliant. Simply install your card into an available PCI slot in your computer and with Plug and Play installation - the hardware setup is complete.

BlueStorm cards are an ideal solution for multi-port serial communications in applications such as Point of Sale; Industrial Process Control, Office Automation and Data/Telecommunications. They allow easy attachment of peripherals such as barcode scanners, receipt printers, card readers, testing and monitoring equipment, modems, printers and any other device requiring serial communications.

Features

- Two, four or eight high performance asynchronous serial ports in various RS-232 and/or RS-422/485 electrical interface configurations.
- Baud rates up to 921.6 Kbps (RS-232) and 1.8432 Mbps (RS-422/485) using PCI UARTs with 64 bytes of TxD/RxD FIFO buffers.
- Supports three RS-422/485 modes: Full Duplex, Half Duplex, Multi-drop Slave.
- Each port can be configured independently (baud rate, parity, data and stop bits).
- DB-9 male fan-out cable (custom cable solutions also offered).
- Six RJ-11 connectors provide +12 VDC or +5 VDC output on pin 6 with a current limit of 300 mA (BlueStorm/SP RJ-11 model only).
- Optional multi-strike surge suppression on all signals, all ports (select models only).
- PCI compliant - with Plug and Play installation.
- QNX 4.X/6.X, Windows 2000/CE/XP/XPe/XP x64/Server 2003/Server 2003 x64,Vista, VxWorks, Ardence RTX and Linux compatible (contact Connect Tech for most current list)

Your BlueStorm product consists of the following components:
- A BlueStorm adapter
- An additional low/standard height chassis bracket (available on LP models only)
- One of the following; DB-9 fan-out cable, approximately 12 in./30.5 cm long, a DB-9 external I/O box , approximately 4ft./122 cm long, or a DB-25 fan-out cable, approximately 12in./30 cm long (optional)
- BlueStorm device drivers and documentation CD

BlueStorm Installation Overview

There are three stages to installing your BlueStorm card:

1. Hardware Configuration
   Interrupts and Memory selection will be set by the host computer's BIOS and operating system. This section outlines jumper settings and configuration.

2. Hardware Installation
   Installation involves the physical installation of the BlueStorm into your computer. Please note that you should configure any jumper settings prior to installing the board.

3. Software/Driver Installation
   Load the appropriate driver for your Operating System, as found on the accompanying CD. Installation guides are also available on the CD to aid you in this process.

Hardware Configuration

Interrupts and Memory Address Selection

All BlueStorm products are PCI cards. Therefore, the host computer's BIOS will automatically set interrupts and memory addresses when you reboot after installation.

Electrical Interfaces

RS-422/485 Electrical Interface

All BlueStorm adapters (excluding BlueStorm/SP RJ-11) support three modes of RS-232/422/485 communication, as outlined below. (See Figure 1 and Figure 2 for jumper block locations.)

Full Duplex Mode

In this mode, TxD+/- & RxD+/- are being driven to a known level all the time. This mode is typically used in point-to-point situations much like RS-232. It is the default setting.

Half Duplex Mode

In this mode the TxD+/- line driver is enabled only when data is transmitted and RxD+/- is disabled when data is being transmitted. This mode is typically used in either point-to-point 2-wire connections OR in multi-drop 2-wire bus connections. This mode requires software setup in **Control Panel – System – Hardware – Device Manager – Ports – CTI PCI UART.** Click on **Advanced** under **Port Settings** after the driver is installed. (See Multi-drop Slave below)

Multi-drop Slave Mode

In this mode the TxD+/- line driver is enabled only when data is transmitted and RxD+/- is enabled all the time. This mode is typically used in multi-drop 4-wire connections. This mode requires software setup in **Control Panel – System Properties – Hardware - Device Manager – Ports – CTI PCI UART**. Click on **Advanced** under **Port Settings**.
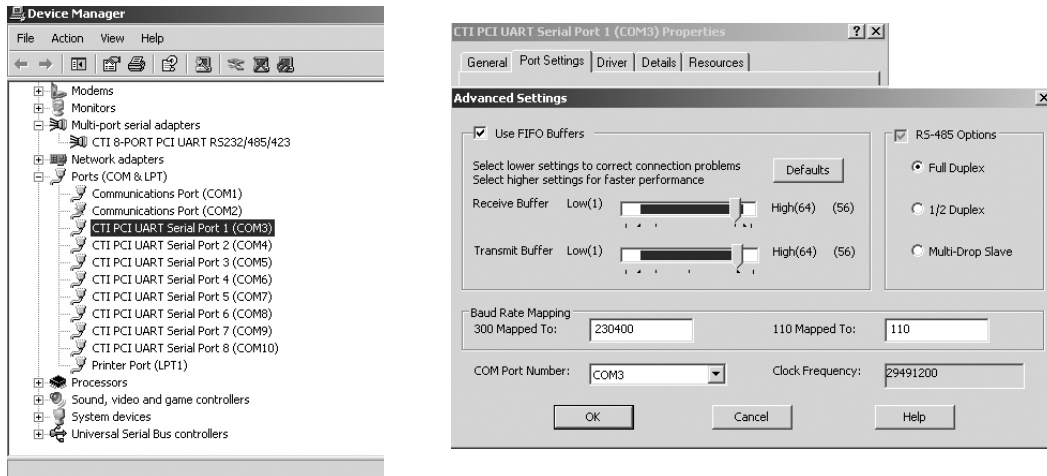

Line Bias/Termination

The RS-422/485 transceivers, both transmit and receive are optionally biased to produce a line level mark condition through jumper selectable resistors. These options are typically used in multi-drop 4-wire connections.

Note: Refer to Table 8 for port 7 and port 8 pinouts.

Jumper Configuration for BlueStorm

Jumper configurations will vary by model. BlueStorm/LP cards feature the jumper layout listed in Figure 7, while BlueStorm/SP and BlueStorm/SP Opto cards use the jumper layout in Figure 8. Lastly, BlueStorm/SP RJ-11 uses the jumper layout used in Figure 9.

Figure 7 demonstrates a common set of jumper configurations for a BlueStorm/LP RS-422/485 card. BlueStorm/LP RS-232 ports do not require jumper configuration. The four RS-422/485 ports are set as follows: Port 1 is set for half duplex, Port 2 is set for half duplex, Port 3 is set for full duplex, and Port 4 is set for multi-drop slave.

Figure 8 indicates a common set of jumper configurations for BlueStorm/SP and BlueStorm/SP Opto. The four ports are set as follows: Port 1 is set for RS-232, Port 2 is set for half duplex, Port 3 is set for full duplex, and Port 4 is set for multi-drop slave.

Figure 9 illustrates the jumper configurations for selecting +5V power or +12V power.
Figure 7: Jumper configuration example for 4 port RS-422/485 BlueStorm/LP models
Figure 8: Jumper configuration example for BlueStorm/SP and BlueStorm/SP Opto models
Figure 9: Jumper configuration examples for BlueStorm/SP RJ-11 models

TxD Control

Install this jumper to enable the RS-485 transmitter only when sending data. This mode is useful for half-duplex operation when only one device is allowed to send data at a time. If the jumper is not installed, the transmitter will always drive the line to an idle state when not sending data.

RxD Control

Install this jumper to enable the RS-485 receiver only when NOT transmitting data. This is useful for half-duplex operation to prevent the transmitting device from receiving its own data as it sends. If this jumper is not installed, the receiver is always enabled and ready to receive data.

RxD ± Termination/Bias

Install this pair of jumpers to enable a 150 ohm terminator across the RxD+ and RxD- pins for the corresponding port. A biasing network is also enabled that drives the receiver to an inactive or safe mode. The receiver can still receive data from another device and the biasing helps to prevent the reception of data generated by noise on the transmission line. The two jumpers for RxD termination/bias must be installed and removed as a pair.

TxD ± Termination

Install this jumper to enable a 150 ohm resistor across the TxD+ and TxD- pins of the corresponding port.

Auto 485 (BlueStorm/LP 2 port RS-422/485 models and BlueStorm/SP Opto models only)

Install this jumper to tri-state the transmitters of ports configured as RS-485 half duplex or multi-drop slave when the computer boots or is reset. This jumper will be overridden once the operating system is booted by the current driver/software RS-485 mode. The jumper is used to ensure that a port will power-on tri-stated. For example, the RS-485 mode selection in the Windows control panel will override this jumper setting once a port is opened.

Note that Auto 485 is a single jumper. The second site is not in use. See Figure 1 for the location of this jumper.

Power-On Tri-state (BlueStorm/SP models only, excludes BlueStorm/SP RJ-11)

BlueStorm/SP models offer a power-on tri-state similar to the Auto-485 mode listed above. The BlueStorm/SP implementation will tri-state ports configured as RS-485 full duplex. This is meant to ensure compatibility with our legacy Blue Heat/PCI cards.

Jumper J1 controls the power-on tri-state functionality. Install a jumper on the first location of the J1 in order to tri-state Port 1 at power-on, install a jumper on the second position for Port 2, etc. Ports will not come out of tri-state until the driver opens the affected port.

Half Duplex and Multi-drop Slave modes require you to select the appropriate mode via software. Please refer to the readme.txt files found in the appropriate directories on the BlueStorm/LP/SP/SP Opto CD.

Connectors and Pinouts

Table 1: DB-25 Female Pinouts for BlueStorm/LP (2 port connector)

Pin No.	Port No.	RS-232 Signal	Signal Direction	RS-422/485 Signal	Signal Direction

10	N/C	no connect	CTS (-)	input
	RJ-45 connector			

Cable CAGRJ4509 will send the signals to eight DB-9 male connectors. See Table 7 for the DB-9 pinouts

*Table 6: Pinouts and Control Signals for DB-9 and DB-25 Male Connectors (BlueStorm/LP and BlueStorm/SP only)*

Pin #		RS-232		RS-422/485	
DB-9	DB-25	Signal	Signal Direction	Signal	Signal Direction
1	8	DCD	input	RxD +	input
2	3	RxD	input	TxD +	output
3	2	TxD	output	TxD –	output
4	20	DTR	output	RxD –	input
5	7	SG	signal gnd.	SR	signal ref.
6	6	DSR	input	CTS –	input
7	4	RTS	output	RTS –	output
8	5	CTS	input	RTS +	output
9	22	RI	input	CTS +	input

DB-9 male

1 ... 5
6 ... 9

DB-25 male

1 ... 13
14 ... 25

Table 7: Pinouts and Control Signals for DB-9 Male Connectors (BlueStorm/SP Opto only)

Pin No.	RS-232 Signal	Direction	RS-422/485 Signal	Direction
1	N/C	no connect	RxD (+)	input
2	RxD	input	RxD (-)	input
3	TxD	output	TxD (+)	output
4	N/C	no connect	TxD (-)	output
5	SG	signal gnd	SR	signal ref.
6	N/C	no connect	CTS (-)	input
7	RTS	output	RTS (+)	output
8	CTS	input	CTS (+)	input
9	N/C	no connect	RTS (-)	output

Male DB-9 Connector

1 ... 5
6 ... 9

Please note that the DB-9 pinouts for BlueStorm/LP and BlueStorm/SP differ from the BlueStorm/SP Opto

Table 8: RJ-11 Pinouts for BlueStorm/SP RJ-11 (ports 7 and 8 only)

Pin No.	RS-232	Direction
1	DCD	input
2	DSR	input
3	RxD	input
4	RTS	output
5	TxD	output
6	CTS	input
7	DTR	output
8	RI	input
9	SG	signal gnd.
10	N/C	no connect

P7/P8

Please note that ports 7 and 8 are not accessible through the factory installed bracket.

Table 9: Pinouts and Control Signals for RJ-11 Connectors (BlueStorm/SP RJ-11 only)

Ports 7 and 8 when a DB-9 cable (part number CAG104K) is attached			Ports 1 through 6, which are accessible through the factory installed bracket		
DB-9 Pin No.	RS-232 Signal	Direction	RJ-11 Pin No.	RS-232 Signal	Direction
1	DCD	input	1	RTS	output
2	RxD	input	2	RxD	input
3	TxD	output	3	TxD	output
4	DTR	output	4	DSR	input
5	SG	signal ground	5	SG	Signal/power ground
6	DSR	input			
7	RTS	output	6	+12 VDC** or +5 VDC**	output
8	CTS	input			
9	RI	input	** J1 selects +5 VDC, J2 selects +12 VDC		

Male DB-9 Connector — RJ-11 Connector

Part #: CAG104K
Technical Tip:
Please ensure that you terminate the CTS signal if your application does not use them. The common way to do this is to connect CTS to RTS. Failure to do so may result in loss of a performance on your BlueStorm/SP RJ-11 adapter.
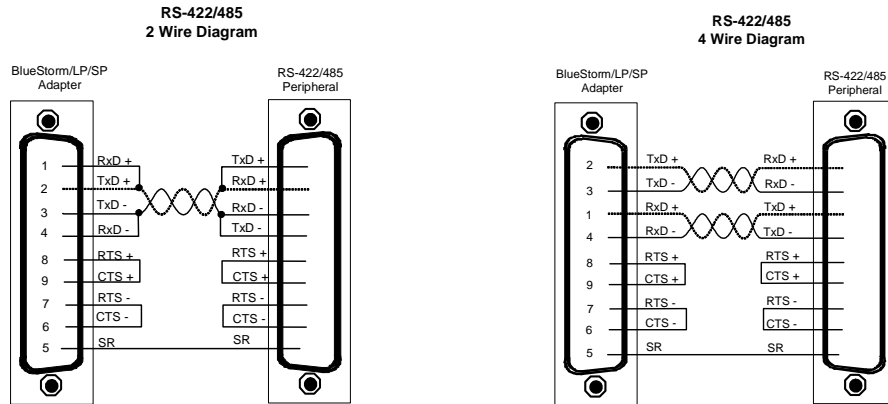

*Figure 10: RS-422/485 Wiring Diagrams (BlueStorm/LP and BlueStorm/SP only)*

Figure 11: RS-422/485 Wiring Diagrams (BlueStorm/SP Opto only)

Hardware Installation

Turn the power off to your computer and open it to expose the expansion slots (consult your system's documentation for more information about this procedure).

Choose an available PCI expansion slot, remove the expansion slot cover and insert the BlueStorm adapter, pushing down gently until the board seats fully in the slot. Secure the BlueStorm card to the computer chassis.

Software/Driver Installation

BlueStorm provides support for QNX 4.X/6.X, Windows 2000/CE/XP/XPe/XP x64/Server 2003/Server 2003 x64,Vista, VxWorks, Ardence RTX and Linux. For installation guidelines and driver codes, please refer to the appropriate directories on the BlueStorm CD. For further information concerning software installation of BlueStorm products please visit Connect Tech's Download Zone.

If you are interested in a device driver for an operating system not listed please contact the Connect Tech Sales Department.

Specifications

Operating Environment

BlueStorm/LP
- ■ Storage temperature: -55°C to 125°C
- ■ Operating temperature: 0°C to 70°C
- ■ Humidity: 5 to 95% non-condensing

BlueStorm/SP, BlueStorm/SP Opto and BlueStorm/SP RJ-11
- ■ Storage temperature: -55°C to 105°C
- ■ Operating temperature: 0°C to 70°C
- ■ Humidity: 5 to 95% non-condensing

PCI Bus Interface

BlueStorm/LP
3.3V or 5V PCI bus.
Please note that the BlueStorm/LP can ship with low and standard profile brackets.

BlueStorm/SP, BlueStorm/SP Opto and BlueStorm/SP RJ-11
3.3V or 5V PCI bus

Communications

Baud Rates
RS-232: 50 bps – 921.6 Kbps
RS-422/485: 50 bps – 1.8432 Mbps

Custom baud rates are also available; please contact our Sales Department for information.

UARTs

BlueStorm/LP (2 and 4 port models)
- 17D152 dual UARTs with 64 byte TxD/RxD FIFO buffers

BlueStorm/LP (8 port models)
- 17D158 octal UARTs with 64 byte TxD/RxD FIFO buffers

BlueStorm/SP and BlueStorm/SP RJ-11 (8 port models)
- 17D158 dual UARTs with 64 byte TxD/RxD FIFO buffers

BlueStorm/SP Opto (4 port models)
- 17D152 dual UARTs with 64 byte TxD/RxD FIFO buffers

Surge Suppression

BlueStorm/LP/SP/SP RJ-11 (excludes BlueStorm/SP Opto)
- TransGuard®Transient Voltage Suppression, able to withstand multiple strikes on every signal of every port
- Transient Energy dissipation 0.05 joules on every signal of every port
- Transient peak current rating 15A on every signal of every port
- EN61000-4-2/3/4 compatible

Optical Isolation

BlueStorm/SP Opto
- 3kV peak to peak on every signal of every port

Dimensions

BlueStorm/LP
Low profile form factor - MD1 compliant

BlueStorm/SP
Length: 11.991 cm, 4.721 inches
Height: 9.652 cm, 3.8 inches

BlueStorm/SP Opto
Length: 14.702 cm, 5.788 inches
Height: 10.605 cm, 4.175 inches

BlueStorm/SP RJ-11
Length: 12.129 cm, 4.775 inches
Height: 10.668 cm, 4.2 inches

Certification

Connect Tech Inc. declares that the product(s) covered by the contents of this manual have been tested and found compliant with the below listed standards as required by the Electromagnetic Compatibility (EMC) Directive for General Immunity Compliance, EN 50 0082.1:1997

EN 55022 Conducted and Radiated emissions
CISPR 22 Class A

EN 55024 Immunity to Disturbances

| EN 61000-4-2 | EN 61000-4-4 |
| EN 61000-4-3 | EN 61000-4-6 |

The above satisfy the requirements of:

USA:	FCC Class A 47CFR, Part 2	FC
Canada:	ICES-003	Industry Industrie Canada Canada
Europe:	EMC Directive	CE
Japan:	VCCI	
Australia/New Zealand:	AS/NZS	

The above agency conformances were met by independent laboratory testing of Connect Tech Inc. product(s) with shielded cables, with metal hoods, attached to either the terminating connectors or cable assemblies supplied with the product(s). Failure to follow good EMC/EMI compliant cabling practices may produce more emissions or less immunity than were obtained in laboratory measurements.

Operation of this equipment in a residential area may cause unacceptable interference to radio and TV reception, requiring the user to take whatever steps necessary to correct the interference.
