USER SAFETY GUIDE

INSTRUCTIONS ON ENVIRONMENT PROTECTION
Do not dispose of this product in the usual household garbage at the end of its life cycle; bring it to a collection point for the recycling of electrical and electronic appliances. This symbol on the product means the instructions for use or the packaging will inform about the methods of disposal. The materials are recyclable as mentioned in its marking. By recycling, material recycling, and other forms of re-utilization of old appliances, you make an important contribution to the protection of the environment. Please inquire at your local community administration for an authorized disposal location.

Important Safety Instructions

When used as directed, this unit has been designed and manufactured to ensure your personal safety. However, improper use may result in electric shock, fire hazards or other dangers. Please read all safety and operating instructions carefully before installation and use. Remember to keep this instruction manual handy for future reference. Take special note of all warnings contained in these instructions and on the unit itself.

- Read and follow all instructions in this manual.
- Unplug this telephone from wall jack before cleaning with a damp cloth.
- Do not use liquid or aerosol cleansers to clean this product.
- Do not use this telephone in or near water (e.g. a bath tub, a sink, or a pool).
- To reduce the risk of electric shock, do not push objects through any slots of the phone or disassemble the telephone. Pushing objects into the telephone or opening (or removing) covers exposes wires and poses serious risks.
- Do not disassemble and/or reassemble this telephone yourself. Contact technical support when service is required.
- Do not place this telephone on a bed, rug, or on any similar surface or near a heat source. Openings for ventilation must not be blocked or covered.
- Do not place this telephone on an unstable cart, stand, or table as it may fall, resulting in damage.
- Avoid using this telephone during electrical storms to prevent the risk of electric shock from lightning.
- Unplug this telephone from the phone jack and contact Customer Support if the following conditions occur:
  - When it is exposed to rain or water
  - When it fails to operate normally
  - When it is dropped or its case is damaged
  - When it exhibits a distinct change in performance
- Do not use this telephone to report a gas leak in the vicinity of the leak.
- Follow all safety instructions and use this telephone with caution when installing or modifying telephone lines.
  - Do not install telephone wire during a lightning storm.
  - Only install telephone jacks in dry locations unless the jack is specifically designed for wet locations.
- Avoid touching un-insulated telephone wires or terminals unless the telephone line is disconnected at the network interface.

USER SAFETY GUIDE

Compliance (USA and Canada)

This product complies with the standards in Part 68 of the FCC Rules in the USA and CS-03 in Canada.

1. This product must be connected to the public switched telephone network through a modular telephone outlet or jack.
2. Upon the request of the local telephone service provider, the user of this product must provide the following information:
   - The "line" to which this telephone equipment will be connected (telephone number)
   - The telephone equipment's FCC registration number and ringer equivalence number. This information is printed on the back or bottom of the unit.
3. If it is determined that this equipment is malfunctioning, the FCC requires that it not be used and that it must be unplugged from the modular outlet until the problem has been corrected.
4. If the product causes harm to the telephone network, the telephone company may temporarily discontinue telephone service. Whenever possible, the telephone company will contact a customer prior to a service interruption. If advanced notice is not possible, the customer will be notifies as soon as possible. The customer will be given the opportunity to correct the problem.

TABLE OF CONTENTS

GETTING STARTED

Thank you for purchasing the JT-P433 Vintage design big button Dual (FSK & DTMF) Caller ID telephone with LCD display. Please read and follow the instructions in this manual carefully to ensure that your product operates correctly.

General Features

- Supports Dual caller ID systems (FSK and DTMF)

3. LCD SCREEN	7. STORE / M1 / M2 buttons	11. UP/ DOWN button	15. speaker
4. SET / BACK button	8. SNOOZE button	12. REDIAL / P button	16. DC 9V JACK

GETTING STARTED

Getting the Telephone Ready for Use

1. Choose a desired flat, level surface location for the unit.

2. Plug one end of the coiled telephone cord into the jack on the handset, and the other into the matching jack on the unit's base.

3. Plug one end of the flat telephone cord into the jack in the rear of the unit's base (marked TEL-LINE), and the other end into the wall jack which supplies telephone service.

Installing the Batteries

The JT-P433 requires three (3) AA batteries, which are used to operate the telephone, the LCD display, and to retain Caller ID data and any settings programmed into the phone. Using an optional 9V adapter (see Notes below) will increase the battery's life span, requiring less frequent battery replacement.

1. Remove the battery compartment cover at the bottom of the unit.

2. Carefully install four (3) AA batteries by observing the polarity direction shown in the battery compartment.

3. Replace the cover.

Notes:
- Whether installing batteries for the first time or replacing them, do not mix old and new batteries, nor should alkaline, standard (zinc-carbon), or rechargeable (nickel-cadmium) batteries be used together.
- When not using the phone for a long period of time, remove the batteries to prevent possible leakage and corrosion. Keeping the phone powered by the optional AC adapter, discussed below, will preserve all data and settings in the phone's memory.
- If neither the batteries nor an AC adapter are connected, the JT-P430 will still be able to place and receive calls, but the telephone, the ability to store Caller ID data, and the LCD display functions will not operate.
- When batteries are used without an AC adapter, they should be replaced when the display dims.
- When replacing the batteries without an AC adapter connected, it's the best to pick up the handset before removing the batteries. Doing so prevents the loss of stored Caller ID data and programmed settings while the batteries are being replaced. If not done, it's possible that all settings and data in the phone's memory will be lost.

OPERATIONAL INSTRUCTIONS

Basic Setup

Note: Please be sure the telephone lines are connected well and batteries or AC adapter are installed before starting setting. Press the **SET/BACK** button to enter the setting menu, use ▲**UP** or ▼**DOWN** buttons to select from the menu including Set Language, Set Local Area Code, Set Time/Date and LCD Contrast. Press the **FLASH** button to exit the setting manual.

A. SET LANGUAGE
-   When the LCD displays "SET LANGUAGE", press the **SET/BACK** button to enter.
-   Use the ▲**UP** or ▼**DOWN** buttons to select the desired language (English, French, Spanish, Turkish).
-   Press the **SET/BACK** button to confirm.

B. LCD CONTRAST
-   When the LCD displays "LCD CONTRAST", press the **SET/BACK** button to enter.
-   Press the ▲**UP** or ▼**DOWN** buttons to select the desired contrast level from 1 to 4.
-   Press the **SET/BACK** button to confirm.

C. SET DATE/TIME
-   When the LCD displays "SET DATE/TIME", press the **SET/BACK** button to enter.
-   Press the ▲**UP** or ▼**DOWN** buttons to set the present year.
-   Press the **SET/BACK** button to confirm the year.
-   Use the same method to set month ,day, hour and minute

D. SET LOCAL AREA CODE
-   When the LCD displays "LOCAL AREA CODE", press the **SET/BACK** button to enter.
-   Press the ▲**UP** or ▼**DOWN** buttons to select the first digit of area code.
-   Press the **SET/BACK** button to confirm the first digit.
-    Use the same method to set the rest of the digits

E. SET LONG DISTANCE CODE
-   When the LCD displays "LONG PREFIX", press the **SET/BACK** button to enter
-   Press ▲**UP** or ▼**DOWN** to select the code
-   Press the **SET/BACK** button to confirm the code

F. SET IP NUMBER (SSN=SPECIAL SERVICE NUMBER)
Note: The Special Service Number (SSN) is a sequence of digits that can be stored in your telephone and used to gain access to certain features of a telephone network prior to dialing an actual phone number. Unless you are completely familiar with the use of an SSN sequence, it is best to skip this feature.
-   When the LCD displays "SET SSN", press the **SET/BACK** button to enter
-   Press ▲**UP** or ▼**DOWN** to select the first digit
-   Press the **SET/BACK** button to confirm the first digit
-   Use the same method to set the rest of the digits

OPERATIONAL INSTRUCTIONS

Basic Setup-continued
