# INNOVATION

**A complete range of mono laser printers for personal desktop printing or a departmental print station. TallyGenicom has a product to fulfil your needs. From low cost A4 to departmental A3 we can deliver you a solution.**

**Our range of mono laser printers comes complete with PCL5e or 6. PostScript 3 making them ideally suited for Windows or Legacy systems. All of our products simply connect directly to your network and can be managed via a range of management tools or by a web browser, helping you to manage your costs.**

### Legacy - No Problem

Imagine replacing an old Dot Matrix or Band printer with a Laser printer without any system changes whatsoever.

All of our departmental printers share the same controller technology, the key feature being "Intelliprint". Unique to TallyGenicom printers, Intelliprint offers a true migration path from older technologies to laser printers on legacy systems.

### TG Forms

An intelligent tool that allows forms to be downloaded in any TallyGenicom departmental printer. Variable data can be completely reformatted, including font changing, repositioning and even printing barcodes. Signatures, logos or graphics for marketing messages can also be added.

TG Forms offers the only no cost printer centric forms solution available today.

### Private and Secure

For confidential jobs such as payroll or personnel communications just enable secure printing. Print jobs can only be picked up from the printer when you have entered your own personal PIN number. If security's not the issue but paper wastage is, then stored printing or walk up printing will ensure print jobs are not left at the printer. Recent customer feedback indicates this could save up to 25% toner and paper costs.

### A4 Personal Mono (9022)

Suitable for small businesses, the 9022 delivers professional print quality and reliability all in a small compact package. PCL emulation as standard ensures the 9022 will connect to virtually anything and unlike other low cost printers it won't tie up your PC. A fast 20 page per minute (A4) and a first print time below 10 seconds ensures you won't be disappointed waiting for documents.

### A4 Mono Workgroup (9330N)

Ideal for workgroups of up to 10 users the 9330N brings speed and quality to your documents increasing overall efficiency in the office. Two models are available the 9330N having two paper input paths and the 9330ND for duplex (double sided) printing, saving even more money and of course adding value to your documents. Both models come standard with Network interfaces together with Parallel and USB.

### A4 Departmental (9035N)

For departments and businesses of up to 20 users the 9035N is a mono laser printer with a host of expandable features and accessories capable of meeting the demands of today's busy office.

Duplex, extra paper handling and PostScript can be pre-configured at the time of purchase or added as your business grows. For the more demanding users a range of memory

options can be simply installed together with barcode support, customising the product for individual needs.

### A4 Departmental (9045N)

For the most demanding network users the 9045N offers all the benefits of the 9035N but at a pace shattering 43 pages per minute. Suitable for up to 25 users the 9045N is the most up to date A4 product available today benefiting from standard features such as 128MB memory and PostScript 3. The 9045N will increase productivity with its ultra fast performance and consistent print quality, a true workhorse.

### A3 High Volume Departmental (9050N)

The 9050N represents performance, value and durability. The 9050N is suitable for large volume departmental use or even production printing.

Our fastest and most durable printer can be configured with host of paper handling options boasting up to 6 inputs. To cope with this an output finisher can be installed saving valuable time letting the printer prepare documents for distribution with it's collate, staple and output punch options. The 9050N is versatile, being able to handle a variety of paper sizes including A3. It's possibly the only mono printer you'll ever need in a busy office.

- Exceptional quality, speed, reliability and above all affordability
- Network interfaces allowing connection to virtually any operating system
- A3 & A4 for workgroups or departmental printing
- PIN feature for secure network print applications

# RELIABILITY

With over 85 years combined manufacturing experience as Tally and Genicom, we provide unrivalled service and reliability.

### Manage Your Printers

Our laser printers come complete with network interfaces allowing connection to virtually any operating system. Embedded web servers on the range ensure printer management is simple and accurate, a vital tool for any IT department. Features such as e-mail notification for supplies ordering will further increase productivity by ensuring you never run out of toner and e-mail on job completion is ideal for remote workers. For management of your printer fleet the TG Net-Admin tool allows real time management and configuration of all the printers connected to your network.

### Reputation

With resellers and a range of sales and support services worldwide, we have a reputation unsurpassed in the industry. Our reputation makes us the printer partner of choice for some of the worlds largest companies.
