⚠ SAFETY INSTRUCTIONS

"**DANGER**", "**WARNING**" and "**CAUTION**" notices appear throughout this manual. It is the responsibility of the operator and installer of the equipment to read, understand and follow these notices. If you have any questions regarding these safety instructions, please contact a FURUNO agent or dealer.

⚠ DANGER	This notice indicates a potentially hazardous situation which, if not avoided, will result in death or serious injury.

⚠ WARNING	This notice indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠ CAUTION	This notice indicates apotentially hazardous situation which, if not avoided, could result in minor or moderate injury, or property damage.

i

⚠ SAFETY INFORMATION FOR THE OPERATOR

⚠ WARNING

Do not open the cover of the equipment.

This equipment uses high voltage electricity which can shock, burn, or cause death. Only qualified personnel should work inside the equipment.

Do not dissasemble or modify the equipment.

Fire, electrical shock or serious injury can result.

Immediately turn off the power at the ship's mains switchboard if water or foreign object falls into the equipment or the equipment is emitting smoke or fire.

Continued use of the equipment can cause fire, electrical shock or serious injury.

⚠ CAUTION

Do not place liquid-filled containers on the top of the equipment.

Fire or electrical shock can result if a liquid spills into the equipment.

Do not place heater near the equipment.

Heat can melt the power cord, which can result in fire or electrical shock.

Do not operate the unit with wet hands.

Electrical shock can result.

Use the correct fuse.

Use of the wrong fuse can cause fire or equipment damage.

NOTICE

Do not use the equipment for other than its intended purpose.

Use of the equipment as a chair or a shelf, for example, can cause equipment damage.

Immediately turn off the power whenever you feel the equipment is abnormal.

Continued use can cause equipment damage.

The useable temperature range is 0°C to 50°C.

Use out of the range can cause equipment damage.

Keep magnets and magnetic fields (speaker, transformer, etc.) away from the equipment.

Magnets and magnetic fields can cause equipment malfunction.

Do not place objects near the equipment.

Objects near the equipment can cause overheating.

Handle the equipment carefully.

Rough handling can cause corrosion.

Do not use chemical cleaners to clean the equipment.

Chemical cleaners can remove paint and markings.

⚠ SAFETY INFORMATION FOR THE INSTALLER

⚠ WARNING

Only qualified personnel should work inside the equipment.

This equipment uses high voltage electricity which can shock, burn, or cause death.

Turn off the power at the ship's mains switchboard before beginning the installation. Post a warning sign near the switchboard to ensure that the power will not be applied while the equipment is being installed.

Serious injury or death can result if the power is not turned off, or is applied while the equipment is being installed.

⚠ CAUTION

Ground the equipment to prevent electrical shock and mutual interference.

Ungrounded equipment can give off or receive electro-magnetic interference or cause electrical shock.

Confirm that the power supply voltage is compatible with the voltage rating of the equipment.

Connection to the wrong power supply can cause fire or equipment damage. The voltage rating appears on the label at the rear of the equipment.
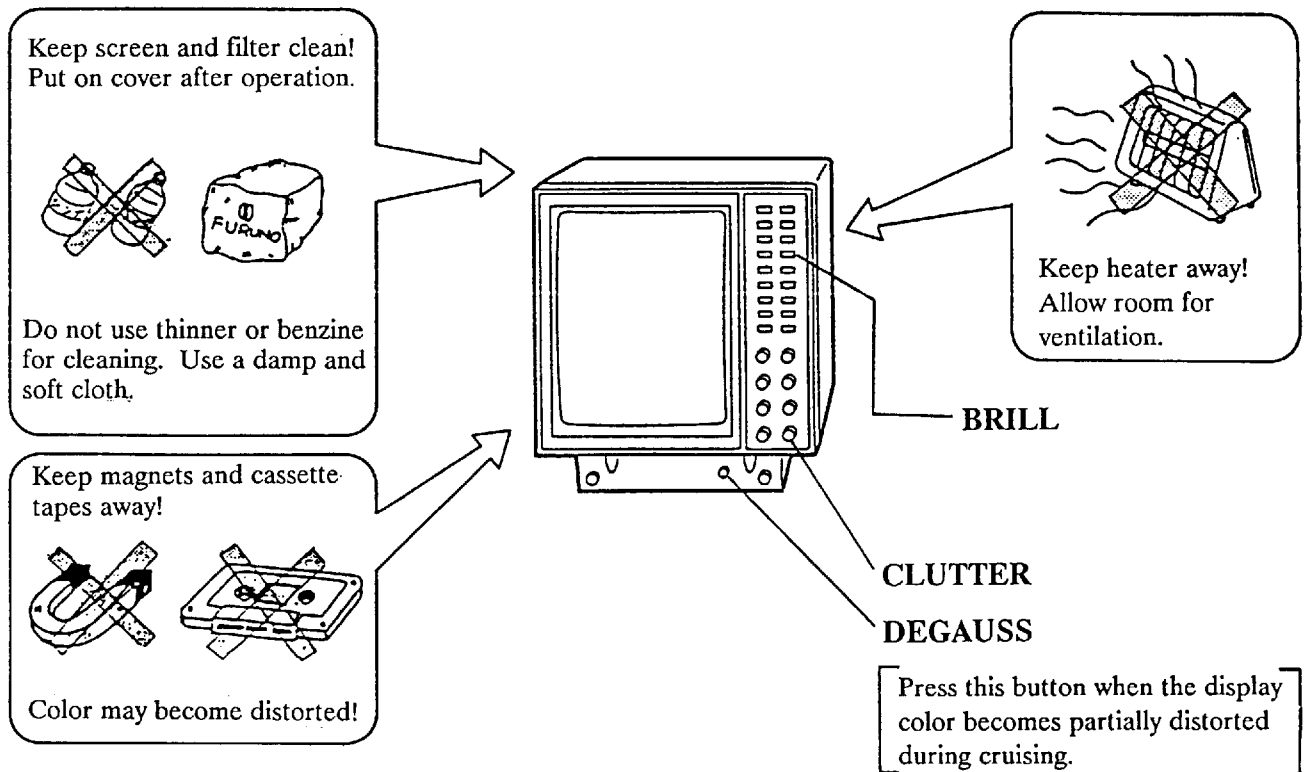

NOTICE

The mounting location must satisfy the following conditions:

- Away from rain and water splash
- Out of direct sunlight
- Away from air conditioner vents
- Away from magnets and magnetic fields
- Moderate and stable in temperature and humidity

HANDLING PRECAUTIONS

- Moderate screen brightness to extend the life of the CRT.

- Do not remove the display cover. High voltage exists inside the unit.

- Do not use too high a setting of the CLUTTER control, or small and weak fish echoes may be missed.

- Observing the following points will help to keep your FCV-10 in top condition for many years.

Keep screen and filter clean! Put on cover after operation.

Do not use thinner or benzine for cleaning. Use a damp and soft cloth.

Keep magnets and cassette tapes away!

Color may become distorted!

Keep heater away! Allow room for ventilation.

BRILL

CLUTTER

DEGAUSS

Press this button when the display color becomes partially distorted during cruising.

Table of Contents

1. A WORD TO FURUNO FCV-10 OWNERS:

Congratulation on your choice of the **FURUNO FCV-10** Scanbeam Sounder! For over 40 years Furuno Electric Company has enjoyed an enviable reputation for quality and reliability throughout the world. This dedication to excellence is furthered by our extensive global network of agents and dealers.

The **FURUNO FCV-10** is designed and constructed to give the user many years of trouble-free operation. However, to obtain optimum performance from this unit, you should carefully read and follow the recommended procedures for installation, operation and maintenance. No machine can perform to the utmost of its ability unless it is installed and maintained properly.

Thank you for considering and purchasing Furuno equipment.

FEATURES

- 16-color presentation (including background) shows detailed information on fish density and the nature of the bottom, on a 14" diagonal medium resolution CRT. Selectable background color lessens eye-fatigue in both daytime and nighttime operations.

- In addition to a real-time color display, the **FE-1280** paper recorder is optionally available for extended recording of underwater searching for later reference.

- The high power and narrow beam transducer of 24 kHz, 10 kW, 10 degrees (port-starboard) x 9.5 degrees (fore-aft) has a maximum detection range up to 6000 m deep.

- The transducer transmits and receives three sounding beams towards ship's port and starboard as well as downward. Searching area is thus three times that of a single beam detection. In the automatic scanning mode, the transmitting beam is scanned between the selected transmit angles in port and starboard. This feature is useful for observing fish behavior and seabed nature.

- To stabilize a sounding beam against ship's rolling, a clinometer unit is provided standard. This ensures stable picture presentation of fishes and seabed echoes even under severe weather conditions.

- The split screens simultaneously display detected echoes from an external net recorder or echo sounders as well as own transceiver-detected echoes if these units are connected to the display unit.

- Display of ship's position and water temperature. (External navigation equipment and water temperature indicator required)

- The A-scope presentation provides detailed presentation of echoes every transmission of ultrasonic pulse by the transceiver unit. This feature is especially useful for trawling where detailed presentation of bottom fish is important.

- Bottom locked expansion and pelagic expansion displays give you highly detailed presentations of echoes.

To Display Unit

3. OPERATING CONTROLS AND KEYS

The **FCV-10** Scanbeam Sounder has a color display unit and a paper recorder unit **FE-1280** (option) as output devices. Each unit has individual operating controls and keys. This manual explains the color display unit. For the **FE-1280** paper recorder, refer to the operator's manual for the **FE-1280** Scanbeam Sounder recorder unit which is separately published.

Take a look at the display unit. The front part of the display unit is separated into two sections: controls and keys on the right-hand side and the CRT on the left-hand side. Operation is simple and straight forward. If you press a key or operate a control the associated reaction is seen on the screen almost immediately.
CONTROL PANEL

A brief description of the function of each key and control appears on the next page.

DEGAUSS Button

F Photo No.1922 PC

Press this button when the display color becomes partially distorted by unwanted access of magnetic field or change of terrestrial magnetism during sailing.

## BEFORE TURNING ON THE POWER

This system can utilize external signals coming from navigation equipment, net recorder, echo sounder, etc. Ensure that all these machines operate properly before turning on this system.

4. DESCRIPTION OF CONTROL PANEL

This chapter provides rough description of operating controls and keys on the control panel. Numbers in brackets denote reference pages. As the operator becomes familiar with operation, you can easily operate this system referring to this page and the display selection guide table on page 17.

Turns on the power. (P. 7) — PWR / OFF — Press it and PWR simultaneously to turn off the power. (P. 7)

Sets display start depth. (P. 8) — [—] [+] SHIFT

[→←] [←→] TX ANGLE — Sets transmit angle. (P. 12)

Sets color gradation. (P. 7) — HUE / BRILL — Adjusts brilliance. (P. 7)

Stores the display. (P. 15) — STORE / RECALL MEMORY — Recalls display. (P. 15)

[◄ .] [►] — .Shifts VRM (Ver. and Hor.). (P. 14)
[▲] [▼] VRM — .Selects menu item. (P. 22)

Displays the menu. (P. 22) — MENU / ENT A MENU — Displays A-scope presentation. (P. 16) / Sets menu item(P. 22)

Sets display range for expansion and upward sounding by net recorder. (P.13) — EXP UP / BL DN RANGE — Sets bottom-lock range or downward sounding range. (P. 13)

VER/AUTO NET
PORT • STBD UP/DN DN

Selects display advance speed. (P. 8) — Adjusts CLUTTER level to reject noise (blue in color). (P. 10)

5

5. DISPLAY MODES

The FCV-10 provides eight display modes to meet the requirements of fishing methods and conditions.

Variety of Displays

Below are the eight display modes. All display modes appear on the quick display selection table on page 17 which shows you how to select a display mode by the display **MODE** selector, **TX DIR** selector and **SUB-MODE** selector.

VERtical display
presents echoes by sounding vertically like conventional color video sounders. This unit transmits ultrasonic sounds in three directions of port, vertical, and starboard.

PORT display
presents echoes sounded towards port.

STBD (Starboard) display
presents echoes sounded towards starboard.

AUTO scan display
presents echoes sounded towards between port and starboard.

EXTernal echo sounder display
presents echoes sounded by external echosounders connected to the display unit. Selection of the display is done on the DISPLAY menu screen. For further details, see page 26.

NET UP/DN and DN displays
presents echoes by upward and downward soundings of the connected net recorder.

Example of Display Selection

1) Select the desired display by referring to the quick display selection table on page 17. For example, select the display of vertical and starboard soundings for observation of underwater situation in two directions.

2) Since this is a 2-display screen, set the **MODE** selector to the **2** position.

3) The TX direction is starboard, so select **STBD** with the **TX DIR** selector.

Starboard	Vertical
Ex. Two display mode

6

6. OPERATION

The FCV-10 is simple to operate. Most major functions can be set with a single key stroke or selector setting. When you become familiar with the unit, you can operate it referring to the separate operation guide sheet.

Turning Power On/Off

PWR key

Press the **PWR** key to turn on the power. The unit will commence transmission and display echoes on the CRT screen in a few seconds.

PWR, OFF keys

Press the **PWR** and **OFF** keys simultaneously to turn off the unit.

Adjusting Brilliance

BRILLiance key

The **BRILL** key adjusts the picture brilliance in four steps; 1, 2, 3, 4 and the value selected appears in large letters for two seconds. To extend the life of the CRT use moderate brilliance.

Selecting Combination of Display Colors

HUE key

The **HUE** key changes the arrangement of display colors. Every pressing changes it in eight steps to match surrounding lightness.
Selecting Display RANGE

RANGE selector

The **RANGE** selector sets the basic RANGE from the five ranges tabulated below. Theses ranges are the factory-set values. You can customize the BASIC range depending on your requirement. See page 27 for DEPTH RANGE menu.

| Position	1	2	3	4	5
Range	100 m	200 m	500 m	1000 m	1500 m

Range

Shifting Range

Shift + - keys   The **SHIFT + -** keys set the start depth of the display. Note that continuous pressing of the keys accelerates the rate of change. (End depth: Max. 6000 m)

Range

## Display Advance Speed Selection

ADVANCE selector   The **ADVANCE** selector sets the display advance speed from 1/1, 1/2, 1/4 or 1/8.

At the fastest speed (1/1) echoes are horizontally expanded. The slowest speed (1/8) provides longer observation period. The **0** position stops picture advancement to observe echoes closely, or take a photograph of the display.

The **LOG** position, operative when a log pulse is available from a speed log, a current indicator, or navigation equipment, sets the display advance speed according to ship's speed.

In this position, the display advance rate changes automatically in proportion to ship's speed. The illustration below shows that the horizontal scale of the display is not influenced by the change of ship's speed, permitting judgement of fish school size and abundance.

Other Positions   LOG Position
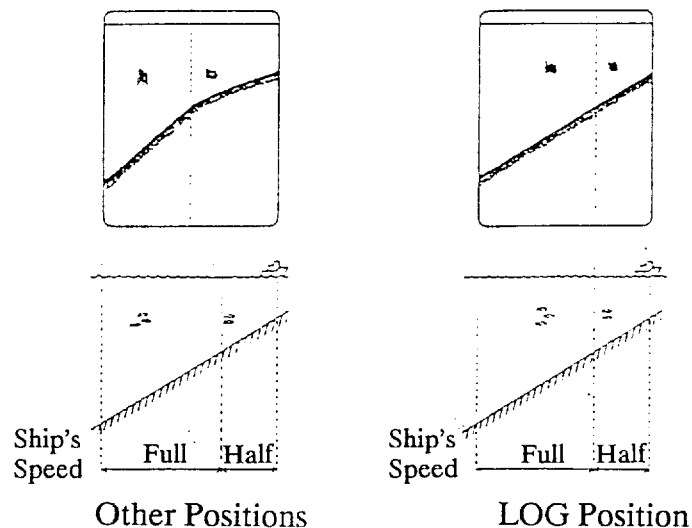

Adjusting GAIN

GAIN control

The **GAIN** control adjusts the sensitivity of the receiver. Set it to the point just below where weak noise disappears from the screen. Detected echoes are painted in reddish to bluish colors according to their intensity. The seabed and large fish schools are drawn in reddish color, and the seabed tail and small fish echoes in bluish color. Normal setting is between 3 and 5. Note that the color of echoes will change when the **HUE** key is pressed.
Too high   Proper   Too low

Adjusting TVG

TVG control

The **TVG** control compensates for propagation attenuation of the ultrasonic pulses. It equalizes echo presentation in color level so that the fish schools of the same size appear in the same density in both shallow and deep waters. In addition, it also helps to eliminate surface noise, which may mask shallow targets.

For normal operation, set the **TVG** control between 3 and 5. Too excessive setting of the TVG may eliminate the desired echoes. If the TVG curve is not suitable for your fishing, you can change it using the RECEIVER menu. See page 25.
Improper   Proper

Removing Clutter

CLUTTER control

Turn the **CLUTTER** control clockwise if blue dots (noise caused by contaminated water) appear on the whole screen. Additionally adjust it whenever the **TVG** is adjusted. Normally set it between 0 and 2. Note that some forms of noises cannot be eliminated.

10

As noted earlier the FCV-10 has a wide variety of display modes. This section shows you how to select display modes. Also refer to the quick display selection table on page 17.

Note: The display unit is shipped with the screen split vertically. If you prefer horizontally divided screen, select it on the DISPLAY menu. See page 26.

MODE selector

The **MODE** selector selects the display mode as shown below.

" 1 "   " 2 "   " 3 "   "COMB"
MODE 1

One-screen display of echoes detected by the sounding beam in the direction of **VER**tical, **PORT**, or **STBD** (starboard), selected by the **TX DIR** selector.

MODE 2

The right screen displays echoes detected by the vertical sounding beam, and the left, echoes detected by the sounding beam selected by the **TX DIR** selector.

MODE 3

The three-display picture shows echoes detected by the port, vertical and starboard soundings on the left, center and right screens, respectively.

MODE COMBination

The combination display mode gives you vertical sounding plus **EXP**ansion, **NET UP/DN** (net recorder upward and downward) and **NET DN** (downward) displays, which you can select by the **SUB MODE** selector.

11

Selecting Sub-Mode Display

EXPansion mode

This position presents a expansion display on whole or half of the screen as selected on the RANG menu. See page 27.

NET UP/DN (Net recorder upward and downward sounding mode)

This position plots echoes on the left screen which are detected by upward and downward soundings of the connected net recorder.

NET DN (Net recorder downward sounding mode)

This position plots echoes on the left screen which are detected by downward sounding of the connected net recorder.

EXTernal echo sounder mode

This position plots echoes detected by external echo sounders connected to the display unit.

Selecting Transmit Direction

TX DIR selector

The **TX DIR** selector chooses the sounding direction among vertical, port, starboard, and auto scan soundings. This selection is necessary when the **MODE** selector is set to 1 or 2 (one- or two- screen display).

AUTO SCAN Mode

In this mode, the sounding beam is automatically scanned between the selected directions in port and starboard. This mode is useful for observing the distribution of fish in a wide area. The figure below illustrates the concept of the **AUTO SCAN** mode.
Selecting Transmit Angle

TX ANGLE key

The FCV-10 uses three sounding beams: port, starboard and vertical. The **TX ANGLE** keys set transmit directions of port and/or starboard sounding beams in one degree steps up to 16 degrees relative to the vertical. The transsmit directions are shown by arrows and angles at the top of the display.

Note: When ROLL CALIB is set to OFF on the TRANSMITTER menu, maximum TX angle is 32 degrees instead of 16 degrees. See page 24.

Vertical
Ex. Two Display Mode

Selecting Range for Expansion and Bottom-locked Display

MODE and SUB MODE selectors

Set the MODE selector to the **COMB** position and the **SUB MODE** selector to the **EXP** position to display a zoom or bottom-locked expansion display. The expansion display range may be adjusted by the **EXP/UP** and **BL/DN RANGE** keys. The display range appears on the expansion display for two seconds. Note that the depth range scale is calibrated automatically.
The bottom-locked display function operates only when the bottom is detected at certain level. Note that the bottom cannot be detected in the water with air bubbles and if the bottom is steep or muddy.

Pelagic Expansion Display

EXP/UP key

The **EXP/UP** key sets the range for marker zoom (M/Z) and bottom zoom (B/Z) displays. The start depth of the display may be set by the **VRM** up and down keys.

Position	1	2	3	4	5
Expansion Range	5 m	10 m	20 m	40 m	80 m

BL/DN key

The **BL/DN** key sets the expansion range of the bottom-locked display.

13

BL/DN key   The BL/DN key sets the expansion range of the bottom-locked display.

Position	1	2	3	4	5
Bottom-lock Range	5 m	10 m	20 m	40 m	80 m

Selecting Net Recorder Display Range

MODE and SUB MODE selectors

Set the MODE selector to the COMB position and the SUB MODE selector to NET UP/DN or DN position to get the net recorder display (on the left display screen). To adjust the display range, use the EXP/UP and BL/DN RANGE keys. The display range appears on the expansion display for two seconds.

Net Recorder Upward Sounding Display Range

EXP/UP key   The EXP/UP key selects the upward range of the net recorder.

Position	1	2	3	4	5	6	7	8
Net Recorder Upward Range	10 m	20 m	120 m	180 m	280 m	400 m	500 m	600 m

Net Recorder Downward Sounding Display Range

BL/DN key   The BL/DN key sets the downward range of the net recorder.

Position	1	2	3	4	5	6	7	8
Net Recorder Downward Range	5 m	10 m	20 m	40 m	60 m	120 m	180m	400 m

Using the Vertical and Horizontal VRMs

VRM keys

This unit provides two types of VRMs (Variable Range Marker): one vertical and one horizontal VRMs. The VRMs function to measure the depth or range to a fish school, by moving the horizontal or vertical VRM with right/left and up/down arrow keys.

Measuring Depth to a Fish School

VRM UP/DOWN keys Move the horizontal VRM marker onto a fish school with the up/down arrow keys. The depth to the fish school is digitally shown above the marker.

14

Horizontal VRM

Fish School

22.0

Pelagic Expansion Range

Depth
Measuring Horizontal Distance to a Fish School

RIGHT and LEFT arrow keys

Move the vertical **VRM** marker onto a fish school with the right/left arrow keys. The horizontal distance to the fish school is digitally shown at the lower left-hand corner of the display.

Distance

Fish School

Distance or Time
Vertical VRM

Note: To display distance ship's speed data should be entered from the connected speed log or navigational equipment. If unavailable, elapsed time after passing over the point of the vertical VRM marker is displayed instead.

Storing/Recalling Picture

This equipment is capable of storing the current display in its memory for later reference and study.

Storing the Display

STORE key

Press the **STORE** key to store the current display in the memory. **STORE** appears on the screen during the storing process. At the same time, an orange color vertical line appears on the screen and advances with the display to mark the position where the **STORE** key was pressed.

15

Reference Marker (Orange)
STORE

Recalling the Stored Display

RECALL key   Press the **RECALL** keyn to recall the stored display. To restore normal operation, press the **RECALL** key.

> *Note 1: The display stored in the memory is erased each time the STORE key is pressed or the power is turned off.*
> *2: The color of the marker line may change when the HUE key is pressed to change the display color.*

A-Scope Presentation

ENT/A key   The A-scope presentation provides for detailed presentation of fish echoes. Press the **ENT/A** key to enable the A-scope presentation. Since fish echoes are displayed with varying amplitudes and colors according to echo strength, the discrimination of bottom fish and their density become easier.

To return to the previous mode, press the **ENT/A** key again.

16

7. INTERPRETING THE DISPLAY

Example of Display (3- Display Mode)
The above illustration shows the location of every marker and indication which appear on the display. Explanation is given for items not previously mentioned.

Minute Marker   Shows one minute by a 30-second mark and 30-second space.

Time, Ship's Speed   Appears when navigation equipment or speed log is connected to the display unit.

Ship's position   Indicated in latitude and longitude, if navigation equipment is connected.

Depth   Measured by the vertical sounding beam.

Water Tempe- rature Scale	Appears when a water temperature indicator is connected to the display unit. Changes automatically according to the temperature among -5 to 15 °C, 5 to 25 °C, 15 to 35 °C.
Water Tempe- rature Readout	Indicates water temperature.
Water Temperature Graph	Plots change of water temperature with a continuous line.

Scanning Area of Sounding Beams

The **FCV-10** scanbeam sounder is provided with the scanning function of sounding beams in port and starboard directions. In this section, the detecting area by scanning sounding beams is explained. .

**One sound-
ing beam**

When the MODE selector is set to "1", the sounding beam is directed vertically. The beam is 10 degrees (port-starboard) by 9.5 degrees (fore-aft) wide, covering an area of 17.5 m by 16.5 m at 100 m depth.
**Two sound-
ing beams**

With the **MODE** selector set to 2 and the **TX DIR** selector to **PORT**, another sounding beam is added in the port direction. In the example at the top of the next page, it directs towards port 10 degrees. By this addition, the sounding beam is widened to 20 degrees by 9.5 degrees and its detecting area is 35 m by 16.5 m at 100 m depth. Compared to sounding by a single beam with similar beamwidth, this has an advantage of better resolution of fish school location because fish schools detected by respective sounding beams are displayed on the respective screens. It may be utilized to observe how fish school and shoal are distributed or shaped and also how bottom condition changes.

Note : Since echoes from a flat seabed become weaker when they are of the slanted sounding beams, be careful not to judge its hardness simply from display colors.
**Three Sound-
ing Beams**

When the **MODE** selector is set to the **3** position, another beam of 10 degrees wide is added to the previous mode. Then the total beam width is 30 degrees x 9.5 degrees, and effective for general searching.
**AUTO scanned
beam**

When the **MODE** selector is set to the **2** position and the **TX DIR** selector **VER/AUTO**, the sounding beam scans in steps of 1 degree or 2 degrees between port and starboard like a single beam searchlight sonar. This mode is useful for examining the nature of a of shoal and distribution of fish. Note that it takes about 9.6 seconds for 1 degree-step scanning with the **RANGE** set to **100 m** to scan from port 16 degrees to starboard 16 degrees. Also the scanning speed becomes slower as the **RANGE** is increased.
20

Using Three Direction Combination Display

When the **MODE** selector is set to the **3** position, the vertical, port and starboard displays appear on the entire screen irrespective of the **TX DIR** selector setting. The two features of this mode are explained referring to Example 2 below.

Distribution of Fish

The port and vertical displays detect fish but the port display does not. This means you should steer your ship in the port direction.

Shape of Bottom

The starboard display draw the longer tail for the bottom than the port display, indicating a hard bottom. The vertical display shows the bottom with the shortest tail, because it is detected with the narrower sounding area by the vertical sounding beam in comparison with by the slant port and starboard sounding beams. Also the port and starboard displays can show the inclination of the bottom by reading each depth.

False Echo by Sidelobe of Sounding Beam

The ultrasonic beam comprises the main lobe and other sidelobe components. Most of the ultrasonic energy is contained in a main lobe; but some energy is transmitted in unwanted direction as sidelobes. If the sidelobe can detect the bottom and fish with a sufficient echo level, false echo by a sidelobe is displayed like Example 2.

Example 1

Example 2

8. CHANGE OF OPERATING MODE BY MENU

Basic Operation

The **MENU**s of the FCV-10 let you change the operating mode from the factory settings to meet your demand, fishing ground condition, method, etc. There are four menus: **INIT**ial, **TX**, **RX**, **DISP**lay and **RANG**e.

Sub Menu ⟶

Setting Item

Normal Display

Menu Display
Procedure

1) Press the **MENU** key. The **INIT**ial menu appears on the lower half of the screen.

2) Press the up and down arrow keys to move the longer cursor to the **MENU SELECT** position.

3) Select a submenu by moving the shorter cursor to the desired submenu (**INIT, TX, RX, RANG**) with the right and left arrow keys.

4) Press the **ENT/A** key. The selected submenu is highlighted and items of the submenu appear below the **MENU SELECT** row.

5) Move the shorter cursor to the item to be changed, by pressing the up, down, right and left arrow keys. Details of the items are given on the following pages.

6) Press the **ENT/A** key to register selection.

7) To change other items, repeat the steps 5 and 6.

8) After making selection, press the **MENU** key. Control is returned to the previous display.

The INITIAL menu contains items which are set during installation, and thus does not require frequent readjustment.

	M E N U				
MENU SELECT	: INIT	TX	RX	DISP	RANG
UNIT	: M	FT	FA	HIRO	
I/O FORMAT	: CIF	NMEA			
NAV INPUT	: LC	LA	DR	GPS	OTHR
POSI DATA	: L/L	TD			
LOG INPUT	: OFF	200P	300P	400P	500P
ROLL-ANG ADJ	: L4°	L2°	0°	R2°	R4°
ROLL-AMP ADJ	: -10%	-5%	0%	+5%	+10%

MOVE CURSOR WITH ▲▼ OR ◄► , THEN HIT ENT KEY.
HIT MENU KEY TO RETURN NORMAL DISPLAY.

UNIT Unit of depth measurement: **M** (meter), **FT** (Feet), **FA** (Fathom), **HIRO** (Japanese Fathom)

I/O FORMAT selects the format {**FURUNO CIF** or **NMEA** (NMEA0183)} of the communication data fed from or sent out to external devices such as navigation equipment.

NAV INPUT selects the device to feed position data: **LC** (Loran C navigator), **LA** (Loran A navigator), **DR** (Dead reckoning position made by a gyrocompass and a speed log), **GPS** navigator and **OTHR** (other navigation equipment).

POSI DATA selects the ship's position data measurement system: **L/L** (Latitude/Longitude), **TD** (Time difference measured by a Loran navigator).

LOG INPUT selects the speed data source; **OFF** (No entry of pulsed speed data), **200**Pulses/n.m., **300P, 400P, 500P**.

Note 1: The log mark is plotted on the optional recorder unit FE-1280 only.
2: When the OFF position is selected, a digital speed data in CIF or NMEA format is fed from navigation equipment.

ROLL-ANG ADJ compensates for mounting inclination of the transducer in port and starboard directions.

ROLL-AMP ADJ compensates for siting deviation of the clinometer from its best mounting location. Refer to page 48.

Normally these items may not be changed after installation. If you would sail a different fishing ground or catch a different species of fish, these items may be changed by the operator.

	M E N U				
MENU SELECT	: INIT	**TX**	RX	DISP	RANG
SCAN SPEED	: **HIGH**	STD			
SCAN STEP	: **1°**	2°			
ROLL CALIB	: **ON**	OFF			
TX OUTPUT	: 1	2	3	**4 MAX**	
SIDE LOBE	: **MIN**	MAX			
TX PRR	: **STD**	LOW			

MOVE CURSOR WITH ▲▼ OR ◄► , THEN HIT ENT KEY.
HIT MENU KEY TO RETURN NORMAL DISPLAY.

SCAN SPEED	**HIGH** (Alternates vertical and simultaneous port/starboard soundings), **STD** (Vertical to port to starboard to vertical successive sounding).
SCAN STEP	selects the scanning step for the sounding beam in the auto scanning mode: 1 degree or 2 degrees.
ROLL CALIB	enables and disables compensation for ship's rolling by the clinometer. If set to **ON**, the adjustable range of the TX angle changes from 36 degrees to 16 degrees for both port and starboard.
TX OUTPUT	selects transmitter output power emitted from the transducer. The 4 position is for the maximum output. In shallow waters, select the lower power (**1, 2 or 3**) to avoid unwanted surface noises.
SIDELOBE	selects the level of the sidelobe of the transmitting signal. The **MAX** position is proper for discrimination of ground quality.
TX PRR	selects the number of transmitting pulses per minutes. The **STD** position is for the standard setting. If the second reflection appears on the screen, however, select the **LOW** position to eliminate it.

RECEIVER Menu

These items may be changed in accordance with fishing ground and fishing method, etc. Set them for distinct echo presentation.

	M E N U				
MENU SELECT	: INIT	TX	**RX**	DISP	RANG
ES IR	: **OFF**	1	2		
NET IR	: **OFF**	1	2		
EXTERNAL KP	: **OFF**	ON			
ATTENUATOR	: **OFF**	1	2	3	
TVG CURVE	: **1**	2	3	4	
TVG RANGE	: 1	2	**3**	4	5FAR
BEAM WIDTH	: **WIDE**	NAR			

MOVE CURSOR WITH ▲▼ OR ◀▶ , THEN HIT [ENT] KEY.
HIT MENU KEY TO RETURN NORMAL DISPLAY.

ES IR   sets the degree of interference rejection from other echo sounders and sonar. The 2-position may reject weak echoes as well as unwanted ones.

NET IR   rejects unwanted noise appearing on the net recorder display.

EXTERNAL KP   synchronizes transmission with another echo sounder installed onboard to prevent mutual interference.

Note: To use this functiopn, the keying pulse from another echo sounder should be applied to the FCV-10.

ATTENUATOR   If the intensity of seabed and fish echoes is too high with the **GAIN** control set to the minimum position, increase this value to decrease receiver sensitivity.

TVG CURVE   presets the **TVG** curve. The higher the setting the greater the **TVG** effect. Change the position according to your fishing ground and method: 1 for 20log R curve suitable for seabed and large fish school detection, 2 for 20log 2R, 3 for 30log R, 4 for 40log R suitable for a single fish and small fish school detection.

TVG RANGE   sets both the **TVG** start depth (from 1 to 5 meters), and **TVG** effective range. Note that the **TVG** effective range is determined by combination of **TVG CURVE** and **TVG RANGE** settings. If , for example, the **TVG RANGE** is set to 3, the effective ranges are; 700 m for 20log R, 350 m for 20 log 2R, 75 m for 30log R and 30 m for 40 log R.

BEAMWIDTH   10 degrees for **WIDE**, 6 degrees for **NAR**row.

DISPLAY Menu

These items may be changed locally on your requirements.

```
                          M      E      N      U

  ┌─────────────────┐
  │ MENU  SELECT    │  :  INIT   TX     RX    ▓DISP▓  RANG
  └─────────────────┘

  SPLIT  SCREEN      :  ▓VERT▓  HOR

     MOVE  CURSOR  WITH  ▲▼  OR  ◀▶,  THEN  HIT  [ENT]  KEY.
     HIT  MENU  KEY  TO  RETURN  NORMAL  DISPLAY.
```

SPLIT SCREEN VERTically or HORizontally divided.

DEPTH SCALE BOTH (Temperature and depth scale displayed), DEPTH (Depth scale displayed), OFF (No scale displayed)

SLANT CALIB ON (Slant ranges to a seabed measured by port and starboard soundings are converted into true sea depth.), OFF (Slant ranges are displayed. These are greater than a true depth because of longer sounding paths of ultrasonic pulse.)

EXP MARKER ON (The pelagic and bottom-locked expansion ranges are shown with marker lines on the vertical display.), OFF (No expansion range marker)

LEGEND turns ON and OFF digital display of ship's speed, ship's position in latitude/longitude, date, and time data fed from external devices if connected.

EXT SEL selects either or both external echo sounders, if connected, which are monitored on the left screen: 1 (#1 echo sounder), 2 (#2 echo sounder), 1.2 (#1 and 2 echo sounders).

CHARACTER selects display language: Japanese or ENGlish.

26

RANGE Menu

```
                         M    E    N    U

┌─────────────────┐

    MOVE  CURSOR  WITH ▲▼ OR ◄►, THEN  HIT  ENT  KEY.
    HIT  MENU  KEY  TO  RETURN  NORMAL  DISPLAY.
```

RANGE 1 to 5   These items let you customize depth ranges.

DRAFT   Set ship's draft (depth of transducer from sea surface). Setting range is 50.0 to -6.0. Normally set it in positive polarity. When unit of depth readout is changed, re-enter it.

EXP MODE   Set type of expansion picture which is displayed when **SUB MODE** switch is set to "EXP".

B/L-A: Bottom-lock expansion picture on whole screen.
B/L-B: Normal and bottom-lock expansion picture combination display.
M/Z: Normal and marker zoom picture combination display.
B/Z: Normal and bottom zoom picture combination display.

Fine Tuning Hue

As noted on page 7, you can adjust display hue with the **HUE** key. If you would like to fine tune the hue, follow the procedure below.

Procedure

1) Press the **PWR** and **OFF** keys together to turn off the unit.

2) Press the **HUE** and **PWR** keys to enable the **HUE CHANGE** mode.

3) Press the **MENU** key. The **HUE CHANGE** menu appears.

4) Select the desired brilliance by pressing the **BRILL** key.

5) Select the color to be changed; **0** to **F** by pressing the up and down arrow keys.
   (**0**: background color, **F**: reddish brown)

6) Move the cursor to the primary color R (red), G (green) or B (blue) by pressing the right and left arrow keys.

Note: The display color develops with the three primary colors of red, green and blue.

7) Observing the color bar, change the value on the cursor, press the up and down arrow keys while pressing the **ENT/A** key. If the desired color cannot be obtained by a single primary color setting, do the same on other primary colors.

8) To set other color levels, repeat the steps 4) to 7) .

9) To set other brilliances, repeat the steps 3) to 8).

10) After setting the hue to your liking, press the **PWR** and **OFF** keys together to turn off the unit.

Recovering Factory-set Hue

If the above cannot bear satisfactory results unfortunately, the factory-set hue can be recovered by pressing the **PWR** and **BRILL** keys together.

9. IF SOMETHING SHOULD GO WRONG
WITH YOUR UNIT

If you cannot get the unit to operate properly, do the Operation Check below to determine if there is equipment fault. If there is a problem, execute the System Diagnosis (P. 30), and report the results when requesting service.

OPERATION CHECK

No Echo Presentation, But Scale Shows.
- Is the **ADVANCE** (display advance speed) control set to **0** (stop)? Normal setting is 1/1.

- Is the **ADVANCE** control set to **LOG**? This position requires ship speed signal input which is fed from a speed log or navigation equipment. Also check that they are working properly.

No Zero Line
- Is the range shift reading 0? If the range is shifted several meters or more, the zero line is not displayed. Press the - shift key to move the zero line to 0 meters.

Low Sensitivity
- Is the **GAIN** control set too low?

- Is the **CLUTTER** control set too high?

- Turn the **GAIN** control clockwise or the **CLUTTER** control counterclockwise to increase the receiver sensitivity.

No Water Depth Readout/Bottom Lock Inoperative
- Is the seabed echo present within the normal display range?

- Is the seabed return strong enough; i.e., red or reddish brown?

- Water depth may not be indicated in the following cases:

1) Seabed return is too weak.
2) Seabed return is interrupted by air foam or a large fish school.
3) Seabed echo is not painted red or reddish brown.

Display Color Distorted

- Is a magnetic field generator (heavy duty transformer, rectifier, etc.) nearby?

- Picture may become distorted if a machine including a heavy duty transformer is located near the unit.

- Display color may become distorted when echoes are greatly different in intensity.

SYSTEM DIAGNOSIS (SELF-CHECK)

Your unit provides self-check facilities to check it for proper operation.

Memory ICs (Check 1)

1) Turn off the unit by pressing the **PWR** and **OFF** keys simultaneously.

2) Turn on the unit by pressing the - and **PWR** keys simultaneously. The results of the memory ICs check appear shortly thereafter. Below is an example of check results.

```
C H E C K 1
MAIN
0252037-00
ROM              OK
SRAM             OK
DRAM             OK
SI01 <-> SI02    NG
MAIN <-> SUB1    OK
MAIN <-> SUB2    OK

SUB1    CPU
0252038-00
ROM              OK
SRAM             OK
DRAM             OK
SUB1 <-> SUB2    OK

SUB2    CPU
0252039-00
ROM              OK
SRAM             OK
```

3) To terminate the system diagnosis check, turn off the unit by pressing the **PWR** and **OFF** keys simultaneously. Then press the **PWR** key to begin the normal operation again.

Checking Controls and Keys on the Front Panel (Check 2)

1) Turn off the unit by pressing the **PWR** and **OFF** keys simultaneously.

2) Press the **PWR** and **ENT/A** keys simultaneously. The display should look something like the figure below.

3) Operate each control and key one by one. The corresponding number on the screen changes if the control or key is functioning properly.
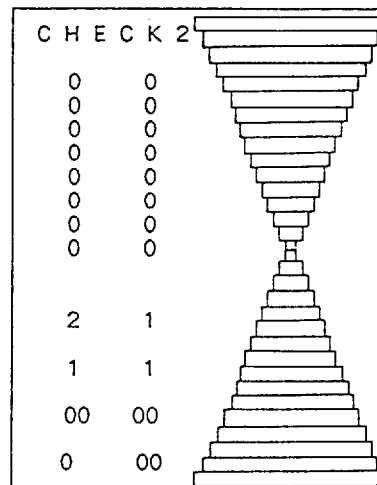

4) To terminate Check 2, press the **PWR** and **OFF** keys simultaneously. Then press the **PWR** key to begin the normal operation again.

Checking With the LED Displays

There are several LEDs inside the unit. The status of LEDs give the service technician some hints to bring replacement parts. Therefore it is preferable you open the cover and check the status of LEDs before calling service.

DANGER

HIGH VOLTAGE exists inside the display unit. Precautions must always be exercised when reaching inside the equipment for checking LED status.

LEDs on MAIN PCB(02P6084)
Symbol	Signal	LED Status	Remarks
CR17	5V	Lighting	5V supply for logic ckt.
CR18	VREF	Lighting	Reference voltage +5V for A/D conversion of operating control signals
CR19	KP	Blinking	Every transmission
CR20	EKP	Not lit or Blinking	Keying pulse from external transceivers.
CR21	QCK	Lighting faintly	When HIGH scan speed is selected.
CR22	LOG	Blinking	When ship speed signal is input.

LEDs on SUB PCB(02P6085)
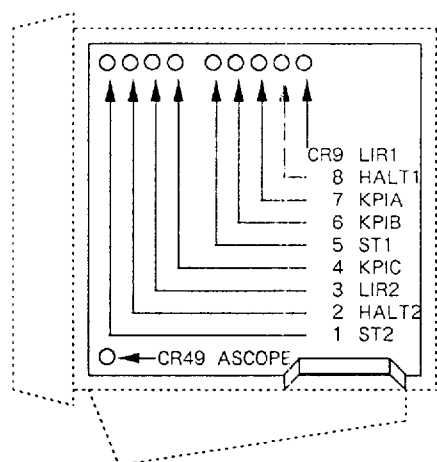

Symbol	Signal	LED Status	Remarks
CR1	ST2	Lighting faintly	Checks CPU on SUB2 board.
CR2	HALT2	Lighting darkly	Checks CPU on SUB2 board.
CR3	LIR2	Blinking	Checks CPU on SUB2 board.
CR4	KPIC	Blinking	By KP. Checks echo acquisition port C.
CR5	ST1	Lighting faintly	Checks CPU on SUB1 board.
CR6	KPIB	Blinking	By KP. Checks echo acquisition port B. (Note)
CR7	KPIA	Blinking	By KP. Checks echo acquisition port A .(Note)
CR8	HALT1	Lighting darkly	Checks CPU on SUB1 board.
CR9	LIR1	Lighting faintly	Checks CPU on SUB1 board.
CR49	ASCOPE	Blinking	By KP. Checks A-scope ckt.

Note: LEDs CR6 and CR7 may not light in some display modes.

32

This mode operates the display unit without transceiver unit connection. Thus this mode is useful for judging whether the display unit is operating properly.

Procedure

1) Turn on the unit by pressing the **RECALL** and **PWR** keys. The demo display shown below appears. (**F**: Reddish brown, **0**: Background color)

2) The unit checks following key and control functions:
   - **RANGE** control and **SHIFT** key
   - **MODE** switch
   - **ADVANCE** control
   - **CLUTTER** control
   - **STORE** and **RECALL** keys
   - **TX DIR** control (See note 1)
   - **MENU** key
   - A-scope display with the **ENT/A** key
   - **HUE** and **BRILL** keys

Note 1: When the SLANT CALIB is set to ON on the menu display, the width of echoes on port, starboard and auto scan displays is reduced with the formula below.

$$Width\ (slant\ display) = Width\ (vertical\ display) \times cos(TX\ angle)$$

*2: The above display is given when the **CLUTTER** control is set to 0.*

3: The color bars do not appear when the **SCAN SPEED** *is set to* **HIGH** *on the TRANSMITTER menu.*

4: The **GAIN** *and* **TVG** *controls do not function during this check.*

5: The **UP/DN, DN** *and* **EXT** *positions of the* **SUB MODE** *switch can be checked when a net recorder or external transceiver is connected.*

10. SPECIFICATIONS

Display Unit CV-100

1. Display Tube	14" diagonal medium resolution CRT
2. Echo Color	8 or 16 colors depending on echo intensity. (Combination of colors can be selected by the HUE key.)
3. Basic Display Range	100, 200, 500, 1000, 1500 m (Reprogramable by MENU.)
4. Display Start Depth	0 to 6000 m minus basic display range
5. Sounding Direction	Slant port, slant starboard, vertical, auto scanning (slant port and slant starboard)
6. Presentation Mode	1) Vertical sounding 2) Slant port sounding 3) Slant starboard sounding 4) Autoscan sounding 5) Bottom-locked expansion 6) Pelagic expansion 7) A-scope presentation 8) Monitoring external net recorder (Upward and/or downward sounding 9) Monitoring external transceivers (ETR-2B/3B) sounding signal
7. Expansion Range	5, 10, 20, 40, 80 m for both pelagic expansion and bottom-locked expansions
8. Variable Range Markers (VRM)	1) Vertical VRM (Time or distance* from VRM to present position) 2) Horizontal VRM (Depth from zero line to VRM)

Note: Speed log input required to measure the distance from the vertical VRM to the present ship's position.

9. Display Memory Capacity	One full screen
10. Brilliance Control	Adjustable in four steps
11. Digital Display	Ship's position in latitude and logitude, Water temperature (digital readout and graph), Ship's speed*

Navigation equipment, water temperature indicator and speed log required.

12. Power Supply	100/110/115 Vac, 2 A, 50/60 Hz, 1 ø, 220/230 Vac, 1 A, 50/60 Hz, 1 ø (Optional step-down transformer CI-350 required)
13. Dimensions and Weight	372 (W) x 432 (H) x 465 (D) mm, 21 kg

Transceiver Unit CV-101

1. Frequency	24 kHz
2. Output Power	10 kWrms
3. Pulselength	1 to 20 msec (variable according to display range)
4. Number of Transmission	200 ppm or less (variable according to display range)
5. Slant Sounding Direction	Can be set in 1 degree or 2 degrees step from 0 degrees (vertical) to 16 degrees or 36 degrees.
6. TVG Curve	20logR, 20log2R, 30logR, 40logR (selected on the menu display)
7. Detection Capability	6000 m for seabed, 1400 m for fish in a satisfactory condition
8. Power Supply	100/110/115 Vac, 2 A, 50/60 Hz, 1 ø or 220/230 Vac, 1 A, 50/60 Hz, 1 ø (Change of transformer tap connection is required.)
9. Dimensions and Weight	374 (W) x 194 (H) x 592 (D) mm, 25 kg

Transducer CV-102

1. Beamwidth	10 degrees (port-starboard) x 9.5 degrees (fore-aft) at -3dB point
2. Dimensions and Weight	467 x 467 x 167 (H) mm, 65 kg

Clinometer CV-103

1. Detection Direction	Ship's rolling of port 20 degrees to starboard 20 degrees
2. Dimensions and Weight	168 (W) x 108 (H) x 150 (D) mm, 2 kg

11. INSTALLATION

Recommended Installation of Transducer CV-102

When the transducer CV-102 is installed on a large vessel just under the bulbous bow, we recommend that it be installed as shown in Fig. 1. FURUNO standard tank T-674 is not strong enough for big slamming.

1) For locally made tank, use a steel plate whose thickness is 10 to 12 mm.

2) The diameter of the cable hole in the top plate should be between 60 and 80 mm.

3) Fix the transducer cable as shown in Fig. 1 if the distance between the transducer and the thru-hull pipe is longer than 1 m. This will prevent damage to wiring inside the transducer due to cable vibration.

Recommended installation:
Fig.1

CAUTION

Damage to the CV-102 has been reported from large trawlers where the transducers, installed just under the bulbous bow, have been struck by waves.

According to our investigation, the CV-102 was installed as shown in Fig. 2 or Fig. 3. These installations did not provide sufficient protection from large waves and thus the transducers were damaged.

Installation case 1 (Refer to Fig. 2): The cutout in the top plate was 400 mm in diameter. Because of the large cutout and large waves, the top of the CV-102 projected outward, which allowed waves to dent the transducer bottom and break wires and elements in the transducer.

Installation case 2 (Refer to Fig. 3): The transducer is only fixed by two bars instead of the top plate. This allowed the transducer to separate from the tank and break.

Bad installtion: Case 1
Fig. 2

Bad installation: Case 2
Fig. 3

Assembling the Transducer Cable

The transducer cable is 30 meters long and has necessary contact pins attached. Insert contact pins into the connector plug and assemble the connector when the unit is installed on board the ship.

1) Pass the cable through the connector housing like the figure below.
2) Insert the contact pins to the plug until they are securely pushed in. Refer to the wiring list for each lead color.

Plug

Note: Colors in parentheses denote colors of tubing which covers black color vinyl leads.
	Color		Color
A	White	EE	(White)
B	Red	FF	(Red)
C	Green	HH	(Green)
D	Yellow	JJ	(Yellow)
E	Brown	KK	(Brown)
F	Blue	LL	(Blue)
H	Gray	MM	(Gray)
J	Orange	NN	(White/Yellow)
K	Purple	PP	Black
L	White/Black	RR	(White/Black)
M	White/Red	SS	(White/Red)
N	White/Green	TT	(White/Green)

Note: Colors in parentheses denote colors of tubing which covers black color vinyl leads.

3) Fix the plug and cable clamp to the connector cover.

Earth Lug

Cable Clamp

Fasten sheath of cable using cable clamp.
4) Check that the guide pin is set to 1 (factory setting is also 1).

Modifying Unit for Connection with FE-1280

Modify the display unit as follows to connect the FE-1280 (option).

1) Remove wires which connect J2 on rear panel to SUB board. Then, make wiring between J2 on rear panel and SUB board by using "SRC Connector 1" (connectors fitted with interconnection wires) supplied as an installation material of FE-1280.

2) Make wiring between J3 on rear panel and SUB board by using "SRC Connector 2" supplied as an installation materials of FE-1280.

SRC Connector 1
(Supplied with FE-1280)

SRC Connector 2
(Supplied with FE-1280)

SUB PCB

43
The clinometer is used to detect the inclination of the ship during rolling to stabilize the transmitting beam. Therefore it is preferable that it be located as near the ship's rolling axis as possible. The best position is summarized as below:

1) The vertical position is as close to the ship's draft level as possible.

2) The horizontal position is as close to the ship's center as possible.

Following the recommendations outlined in 1) and 2), the mounting position is shown below.
Note: The unit should be oriented forward referring to the bow mark.

Calibration of Clinometer

If the clinometer causes unwanted error due to its mounting position, compensate for it on the **INITIAL** menu.

1) Measure actual inclination by the ship's clinometer.

2) Press the **MENU** key to present the menu display.

3) Three digital displays shows rolling angle in three digit.

4) Select the calibration value at the **ROLL-AMP ADJUST** between -10% and +10% so that the digital display indicates the value most closest to the actual inclination angle.

Rolling Angle
LED (3 digits)

TX Angle LED (3 digits)
