

Stowaway® Universal Bluetooth® Keyboard for Pocket PC Quick Start Guide

Before installing the Stowaway Universal Bluetooth Keyboard application on your Pocket PC device, it is a good idea to back up your data using ActiveSync®. Please delete any other keyboard software you have previously installed on your device to avoid potential conflicts.

This software application enables your handheld device to interact with the external keyboard. You will need at least 300KB of memory for the keyboard application.

Battery Installation:

1. Remove the battery door on the base of the keyboard.
2. Insert two (2) AAA batteries (included) inside the battery compartment.
3. Replace the battery door.

Opening and Closing the Keyboard:

1. To Open: Lift the stand, press the button on the left side of the keyboard and swing the right section open.

2. To Close: Slide the tab right to unlock the keyboard, snap keyboard shut, depress stand with thumb and secure.

Installing the keyboard application:

1. Connect your handheld device to its synchronization cradle/cable and establish a connection between the computer and your PDA using ActiveSync®.
2. Insert the CD-ROM into the CD-ROM drive on your PC.
3. Follow the on-screen instruction to complete the installation.
4. For proper operation, the driver must be installed into **Main Memory**.
5. When the installation is complete, reset your PDA when prompted.

Configuring the keyboard:

1. After reset, select **Bluetooth wireless keyboard** and tap **Setup**.
2. Place the keyboard in **Discoverable mode** by simultaneously pressing the <Ctrl> <Left Fn> <Right Fn> keys on the Stowaway Universal Bluetooth keyboard. This is indicated by the **Keyboard Status Light** (above the <T> key), flashing green once per second.
3. Tap **Connect** and the keyboard is ready to use.

Reestablishing the Bluetooth connection between the PDA and Keyboard:

If you prefer the convenience of not having to place the keyboard into **Discoverable Mode** before each use; it is best to do 1 of 2 things:

1. Setup a **Secure** connection.
 - a. Scan and discover as described above, then check the **Secure** box and tap **Connect**.
 - b. When prompted enter a numeric-only **passkey** (of your own choosing) on the PDA's On-Screen keyboard using the stylus and tap OK.
 - c. Type the same **passkey** on the keyboard using LFn+number and Enter.
2. Set the PDA to accept **pairings** from **All devices**.
NOTE: This is a vulnerable configuration (consult the Owner's Manual for details).
 - a. On the PDA, open **Bluetooth Settings**.
 - b. Open the Accessibility tab and select **All devices**.

NOTE: If applicable, the above steps may be done automatically by tapping **Make PDA accessible** during the initial configuration of an unsecure connection.

Removing and Replacing the Stand (optional):

1. Place keyboard on a flat surface and pull stand with a slight rotating motion.
2. Replace stand by aligning clips and pressing until it snaps into place.

For more comprehensive instructions please refer to the electronic Owner's Manual located on the CD-ROM.
