ENGLISH

- ✓ This Instruction Sheet only provides descriptions for electrical specifications, general specifications, installation & wiring. Other detail information about programming and instructions is compatible with S4/SX/S3 series; please see PLC Application Manual for more information about the optional peripherals, please see individual product instruction sheet or "DVP-PLC Application Manual". Spec. Standard: IEC60947-5-2.
- ✓ This is an OPEN TYPE PLC. The PLC should be kept in an enclosure away from airborne dust, humidity, electric shock risk and vibration. Also, it should be protected methods such as some special tools or keys to open the enclosure, in order to prevent hazard to users or damage the PLC.
- ✓ Do NOT connect the AC main circuit power supply to any of the input/output terminals, or it may damage the PLC. Check all the wiring prior to power. To prevent any electromagnetic noise, make sure the PLC is properly grounded. □ DO NOT touch terminals when power on.

### 1 Introduction

Thank you for choosing DELTA's PLC DVP series. The DVP-SC series has a 12-points (8 input points + 4 outputs) with powerful instructions (the same instruction sets as S4/SX/S3 series) for use. It also has an 8K steps program memory and high-speed pulse inputs(X10 and X11)/outputs(Y10 and Y11). For high-speed pulse, the bandwidth can be up to 130kHz and 100MHz maximum for single input/output. Besides, it also provides functions of position control and zero point return to use with high speed pulse output. It could connect all extension units of DVP-SS series for various applications.

### Product Profile and Outline

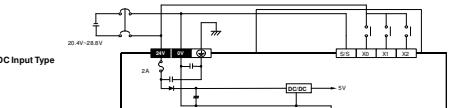

**Battery replacement:** Battery replacement must be finished within 3 minutes, or the internal data of the PLC (including the program area, RTC and latched registers) could be lost or destroyed.

### 3 Safety Wiring

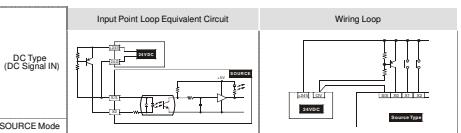

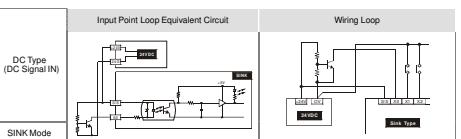

Since the PLC is used to control numerous devices, motion of either one device could affect the motion of other devices. Therefore the breakdown of a device would consequently be detrimental to the whole auto control system; thus the result is dangerous. Please use the recommended wiring below for the power input (DVP12SC11T/DVP12SC02):

### 4 Input Point Wiring

The DC power is used for DC input signal. Two types of DC wiring are used: SINK and SOURCE, defined as follows:

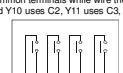

Sink - Current flows into the common terminal S/S      Source - Current flows out of common terminal S/S

### 5 Output Point Wiring

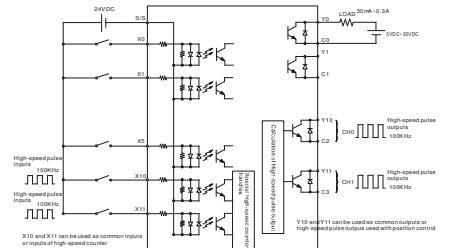

- Two types of DVP-SC Series PLC output modules Transistor. For the electrical specification, please refer to the function specification.
- Please watch out the connection of common terminals while wire the outputs. Output terminal Y0 uses one common terminal C0, Y1 uses C1, and Y10 uses C2, Y11 uses C3 as shown below:

Action indication: When the output point is active, the corresponding indicator at the front panel will be on.

- Isolated circuit: The optical coupler is used to isolate signals between PLC internal circuits and input modules.
