#### III. How to Re-define the HOTKEYS

First, you will need to install the HOTKEYS' driver, which is the floppy disk that comes with the keyboard.

After that you will see a keyboard icon at right bottom of your screen. These icons will comes out every time when you start the computer.

The HOT KEYS are already set up once you installed the driver. If you want to redefined the HOTKEY, you have to click on the keyboard icon where is at the right bottom screen.

After you see a keyboard properties' window. Then go to the HOT KEYS section. You will see a screen, which has mention keywords on it, and you will see 19 buttons looks just like the buttons on your keyboard.

Every time you want to re-define the HOT KEY just click on the button, and then go to custom, then click on the select button. Then you will have to go to Browse File to find out the file, which you want to set up on your HOT KEYS. After you finished it click on OK bottom, then click on APPLY bottom, then close the keyboard properties' window.

After you finish all the steps, the HOT KEYS would function as you wished.
