

Real star quality and performance.

Choosing the right hob to suit your kitchen and the way you want to cook is very important. The Electrolux range of hobs feature a stunning silver Induction model and a 'striking' flat design on gas hobs, as well as a 90cm model with 6 burners for rapid power and controllable heat.

Gas hobs

A range of flat design gas hobs giving the consumer great design lines coupled with safety and ease of use. Our gas hobs complement our range of ovens perfectly, with a flat design hob which is stylish and easy to use.

All feature automatic ignition, flame safety devices and a selection of enamel, matt black or cast iron pan supports.

Electric hobs

Our range of ceramic hobs complement the oven range perfectly. The design is simple, yet elegant, perfect for today's modern kitchen. There is a choice of rotary control or touch control models and the range includes two induction hobs. All standard ceramic hobs feature rapid power zones which react in under 5 seconds, saving time and energy.

Auto select

No more worries about your pans boiling over. With the 'Auto Select Function', your pan will be brought to the boil and then automatically turn down to the selected setting, so you don't have to stand over your cooking.

Triple crown wok burner

This is ideal for cooking the perfect stir-fry, giving you maximum heat, quickly and efficiently to ensure that your food is cooked perfectly.

Larger cooking capacity

On our 75cm hobs, there is now a 20% larger cooking area so you can fully utilise the cooking space on your hob, to include pots and pans even when using your wok, while still fitting into a standard 60cm cut out.

Easy clean

We have designed our hob range so that it is so easy to clean. Less dirt traps and tight corners and with the ceramic hobs the glass surfaces are easily wiped over.

Touch controls

With our ceramic hobs you can quite literally have fingertip control with our sleek front touch controls, ensuring precise temperature control. On selected products there is also a 99 minute timer, which saves you having to check the clock.

Additional safety features

Featuring integrated electronic ignition for easy lighting and residual heat indicators, that light up to show if the surface of the hob is still hot. The gas hobs all feature thermocouples, which ensure the gas is cut off if the flame is accidentally blown out. Your safety is paramount when cooking in your kitchen.

Induction hobs

Induction hobs work by a wire coil in the hob creating a magnetic field. When this field comes into contact with a material which can be magnetised, such as steel, enamelled steel or cast iron pans, the contents of the pan heat up. The benefits are increased speed and precision as the heat is distributed quickly and evenly throughout the pan.
