1.4 Introduction

The FO-HSDSI-SET is an ideal and economic solution designed for transmission of multi-rate SDI video, with embedded audio and metadata over a multi-mode optical fiber cable.

The transmitter module (FO-HSDSI-S) receives one HD-SDI electrical input, perfectly converts SMPTE 292M, SMPTE 259M, or DVB-ASI electrical SDI signal to multi-mode optic SDI signals. The receiver module (FO-HSDSI-R) receives optical signal from input LC connector, and then perfectly converts it to electrical SDI signal. Both transmitter and receiver provide equalizing and re-clocking at input unit in order to re-construct the signal for consistent quality. The FO-HSDSI-SET is perfect for today's broadcast applications, including video production, video editing, studio to studio and studio to CATV head end. In addition, since transmission of content is inherently secure and immune to outside interference, fiber applications are favored in government, military, and medical environments.

1.5 Features

- Enable transmission of digital video signal over optical fiber up to 1 km
- Automatic cable EQ up to 300m (1000ft) at SD-SDI or 150m (500ft) for HD-SDI
- Standard LC-type fiber optic connector
- Supports following protocols:
 - o SMPTE 259M (270Mbps)
 - o SMPTE 259M (360Mbps)
 - o SMPTE 292M / HDTV (1.485Gbps and 1.485/1.001Gbps)
