FCC NOTE:

This unit has been tested and found to comply with limits for a class B digital device unit, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: To assure continued compliance, follow the attached installation instructions and use only shielded cables when connecting to other devices. Also, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate equipment.

IMPORTANT INFORMATION REGARDING USE OF VIDEO GAMES, COMPUTERS, DSS OR OTHER FIXED IMAGE DISPLAYS.

The extended use of fixed image program material can cause a permanent "shadow image" on the picture tube. This background image is viewable on normal programs in the form of a stationary fixed image. This type of irreversible picture tube deterioration can be limited by observing the following steps:

- A. Reduce the brightness/contrast setting to a minimum viewing level.
- B. Do not display the fixed image for extended periods of time.
- C. Turn the power off when not in actual use.

Note: *The marking or retained image on the picture tube resulting from fixed image use is not an operating defect and as such is not covered by Warranty. This product is not designed to display fixed image patterns for extended periods of time.*

Read these instructions completely before operating TV.

Battery Installation

Use two AA batteries:

- Remove battery cover by pushing in and up near arrow.
- Install batteries matching (+) and (-) polarity signs.
- Replace the battery cover.

Precautions

- Replace batteries in pairs.
- Do not mix battery types (zinc carbon with alkaline).
- Do not recharge, heat, short-circuit, disassemble, or burn batteries.

Note: Incorrect installation can cause battery leakage and corrosion that will damage the Remote Control.

Programming The Remote

The Universal Remote Control can be programmed to operate many manufacturers' components, using the component function buttons for CABLE, DBS, VCR, or DVD. Follow the procedures for programming your Remote Control with or without codes for the component.

Determine the manufacturer of the component and look in the table for the code.

With A Code

- Confirm that the external component is plugged in and on.
- Turn the component off.
- Press the **ACTION** and **POWER** button, together, **for at least 5 seconds.**
- Press appropriate component button on the Remote Control (VCR, DBS/CBL, or DVD).
- Enter the 3-digit component code using the Remote Control numeric keypad (0-9 buttons).
- Press the Remote Control **POWER** button to test the component. If the component is successful, the component will turn on.

Helpful Hints: Unsuccessful Code
If the component does not operate with the Remote Control, repeat the procedure using another code. (Some brands have multiple codes.) If an incorrect code is entered, or if the procedure takes longer than 30 seconds, the programming will fail.

Without A Code

This procedure searches all codes and is called the "search" procedure.

- Confirm that the external component is plugged in and on.
 - Turn the component off.
 - Press the **ACTION** and **POWER** button, together, for at least 5 seconds.
 - Press appropriate component button on the Remote Control (VCR, DBS/CBL, or DVD).
 - Press the  button to move forward or backward.
 - Press the Remote Control **POWER** button to test the component. If the component is successful, the component will turn on.
- Note:** Repeat the procedure for each component. If the procedure fails after 30 attempts, the programming will fail.
- After the code is found, press the **POWER** button to turn the component on.

Component Codes

The Universal Remote Control is capable of operating many component brands after entering code. Some components may not operate because the codes are not available due to limited memory. The Universal Remote Control does not control all features in all models.

Select either Pan & Scan or Letterbox.

Pan & Scan: The video material for a wide-screen will be played back in the Pan & Scan style on a conventional television.

Note: Video material not formatted in the Pan & Scan style will be played back in the letterbox style.

Letterbox: The video material for a wide-screen will be played back in the letterbox style with black bars top and bottom on the screen.

D. Range Compression

Select D.(Dynamic) Range Compression Off or On.

Off mode is selected to hear the normal audio range.

On mode is selected to listen to dynamic sound even on low volume. Dynamic range is the difference in volume between the quietest and loudest sounds heard. Dynamic compression limits the level for listening at low volume. This is useful late at night, for example.

Note: This function only works with Dolby Digital DVD.

Still Picture Display

This menu is used to select the type of still picture displayed on the screen. Select either Off or On.

If **Off** mode, the picture type (I/P/B) will not be displayed on the TV screen in the still picture mode. (Factory preset)

If **On** mode is selected, the picture type (I/P/B) will be displayed on the TV screen in the still picture mode.

For your reference:

When On is selected in the Still Picture Display, the following screen is displayed in the still picture mode.

Explanation of I/P/B

The MPEG 2 standard adopted for DVD uses the following 3 picture types for the coding of each picture (frame) on the TV screen.

- **I-Picture (Intra coded picture)**

This is the standard picture type, and each picture is coded separately. Since it features the best picture quality, it is recommended that the screen be frozen with I-Picture when the picture quality is to be adjusted.

- **P-Picture (Predictive coded picture)**

This picture type is computed on the basis of a past I-Picture or P-Picture.

- **B-Picture (Bidirectionally-predictive coded picture)**

This picture type is computed by comparing the previous and subsequent I-Picture or P-Picture. It has the lowest volume of information.

Black Level Control

This menu lets you select the black level of the picture, "Lighter" or "Darker".

Procedure

- In Other Settings menu, press ▲ or ▼ button to select Black Level Control.
- Press ACTION/ENTER button to display the sub-menu.
- Press ▲ or ▼ button to select either "Lighter" or "Darker".
- Press **ENTER**.
- Press **RETURN** repeatedly to exit the DVD SETUP menu.
