1.5 Application Circuit

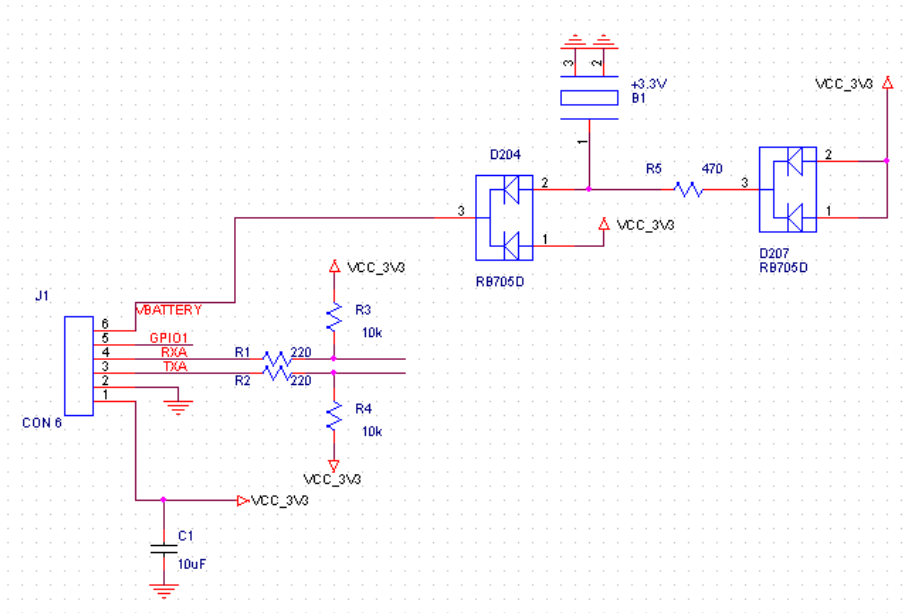

Figure 1-4 Application Circuit Reference

Note:

- (1) Ground Planes:
This pin2 should be connect to ground.
- (2) Serial Interface:
 - (I) The TXA pin is recommended to connect to serial resistance(220Ω) and pull up ($10K\Omega$). It can increase the stability of serial data. (Default NMEA)
 - (II) The RXA pin is recommended to connect to serial resistance(220Ω) and pull up ($10K\Omega$). It can increase the stability of serial data. (Default NMEA)
- (3) Backup Battery:
When module is working, must to supply VCC pin(Pin1) and VBATT pin(Pin6) power at the same time.
It's recommended to connect a backup battery to VBATT pin.
In order to enable the warm start and hot start features of the GPS receiver.
If you use backup battery, should be add a bypassing capacitor ($10\mu\text{F}$) at VBATT pin. It can reduce noise and increase the stability.

(4) Power:

Connect VCC pin to DC 3.3V. The power supply must add bypass capacitor(10uF and 1uF).It can reduce the Noise from power supply and increase power stability.

(5) GPIO:

The GPIOs function are for customer used.

If no use GPIO function, it don't connect anything.

6	VBATT	I	Backup voltage supply	DC + 2.5 ~ +3.6V Current ≤ 10uA

Definition of Pin assignment

VCC(+3.3V DC power Input)

This is the DC power supply input pin for GPS system. It provides voltage to module.

GND

GND provides the reference ground.

TXA

This is the main transmitting channel and is used to output navigation and measurement data to SiRFdemo or user written software

RXA

This is the main receiver channel and is used to receive software commands to the board from SiRFdemo software or from user written software.

VBATT (Backup battery)

When module is working, must to supply VCC pin(Pin1) and VBATT pin(Pin6) power at the same time.

This is the battery backup input that powers the SRAM and RTC when main power is removed. Typical current draw is 10uA.

The supply voltage should be between 2.5V and 3.6V.

GPIO Functions

- 2 Several I/Os are connected to the digital interface connector for custom applications.**

Software Interface

2.1 NMEA V3.0 Protocol
