USB Connection with Windows 98 on Toshiba Notebooks

Plug the USB connector into the USB port. The first time you connect the keypad, a dialog box appears informing you that Windows has detected new hardware. This installation describes typical screens that may appear. The screens that appear on your computer may vary.

- ❖ The **Add New Hardware Wizard** dialog box displays the prompt **"This wizard searches for new drivers for: USB Human Interface Device:"**. Click **Next**.
- ❖ The next dialog box displays the question **"What do you want Windows to do? followed by two choices. Select the second choice, "Display a list of all the drivers in a specific location, so you can select the driver you want."** Then click **Next**.
- ❖ When the default driver is located, the name of the driver **"USB Human Interface Device"** appears in the dialog box. Highlight the driver name and click **Next**. Windows is now ready to install the selected driver. Click **Next** again. When

a dialog box appears with the message **“Windows has finished installing the software that your new hardware device requires.”**, click **Finish**. The previous steps will repeat until all three drivers are installed.

Note: If the operating system is unable to locate the drivers, you need to insert the Windows 98 or Windows 98 Second Edition CD-ROM, or install the Win98 cab files onto your hard disk drive in the c:\windows\options\cabs folder.

USB Connection with Windows 2000 on Toshiba Notebooks

Plug the USB connector into the USB port. A dialog box appears informing you that Windows has "Detected New Hardware." The compatible driver is installed automatically. When the Detected New Hardware dialog box closes, the installation is complete.

USB Connection with a Macintosh Computer

Plug the USB connector into the Macintosh USB port. The operating system does the rest.

PS/2 Connection with Windows 95, 98, NT 4.0, or 2000

Plug the USB connector into the PS/2 Adapter. Plug the PS/2 Adapter into the PS/2 port and reboot the computer. The operating system does the rest.

USING THE NUMERIC KEYPAD

Now you can begin using the numeric keypad. It resembles the standard 17-key keypad layout on a full-size computer keyboard, with the addition of four special function keys across the top. With Windows, these four keys have the same effect as the equivalent keys on a PC keyboard:

- ❖ ESC key
- ❖ Windows launch key
- ❖ Applications key
- ❖ Backspace key

NOTE: When the keypad is connected to a Macintosh computer, the directional keys, the Windows launch key, and the Applications key are not operational.

Num Lock Key

When connected to a PC with Windows, the Num Lock key on the keypad works independently of the Num Lock key on your computer keyboard. Toggling Num Lock on the keypad has no effect on the keyboard Num Lock function. Similarly, toggling the Num Lock key on the keyboard has no effect on the keypad Num Lock function.

Disconnecting the Keypad

If the numeric keypad is connected to a USB port on your computer, you simply detach it from the USB port. If the keypad is connected via the PS/2 port, you must first shut down Windows, then detach the keypad.
