PHILIPS

Picture

High Definition Digital

A full 1920 x 1080 interlaced image is achieved by combining special display tubes, lenses, and screen for superior image performance. Philips has maximized the potential of emerging rear projection display optics to achieve nothing short of the finest picture possible. Experience it!

64" Widescreen Display

Fill the room with a super-large 64" display. Widescreen 16:9 format provides a cinematic experience. Widescreen productions may be shown without compromise to artistic imagery. If a 4:3 picture is the primary source, it will be expanded to fill the screen.

ATSC Certified

Is the program content broadcast on the traditional analog channel? No problem. Is it broadcast in the new digital format? No problem. Whatever the terrestrial broadcast format, this television will display the best picture possible. Fully compliant with analog NTSC and all 18 digital ATSC formats. Best picture, best sound.

9" CRTs

Utilizing high-resolution phosphors and a tighter beam spot, these monochrome picture tubes with large faceplates offer superior brightness and a sharper picture than ever before. Now your large screen pictures come alive with radiant color and rich highlights.

First-Surface Mirrors

By using a front-silvered imaging mirror to eliminate light refraction, this large screen TV delivers virtually all of the light created in the optics bed right to the viewing screen. In concert with other advanced features in this model, your picture displays a brilliance and clarity never before possible on a screen with these dimensions.

Three-Line Digital Comb Filter

Improved chroma/luminance separation over standard two-line glass comb filters for a difference you can really see. Offering vertical edge enhancement and virtually no "dot crawl," it easily supports the demands of DVD Video players, Web browsers, and other advanced, high-resolution video media (through A/V inputs).

Screen Protector

Prevents serious accidental damage to the delicate front lenticular screen. It's almost like having a full-time body guard watching over your investment.

Convenience

TV Guide Plus+™ Programming

This multifacet feature captures and automatically downloads advanced programming information including onscreen all channel review, program summaries, sorting by category (sports, movies, etc.), microchip storage capacity and channel availability determine volume of downloaded data.

Remote Control

Pronto

This stylish, universal, learning remote controls virtually all IR devices, learns new commands as your system expands, and can be customized according to personal preferences. Featuring a large LCD backlit touchscreen, the Pronto gives you easy access to all key features. (TS1000)

Sound

Dolby® Digital Sound

Multichannel sound at its best. Fully compatible audio system will replicate a Dolby Digital sound source through internal amplification or provide source for an external receiver from broadcast medium.

Dolby, AC-3, and the double-D symbol are trademarks of Dolby Laboratories. This Dolby Digital implementation has not yet completed the evaluation process by Dolby Laboratories and is offered subject to obtaining approval. Guide Plus is a trademark of Gemstar Development Corp. TV GUIDE is a registered trademark of TV GUIDE Financial, Inc. The TV GUIDE Plus Programming system is manufactured under license from the Gemstar Development Corp.

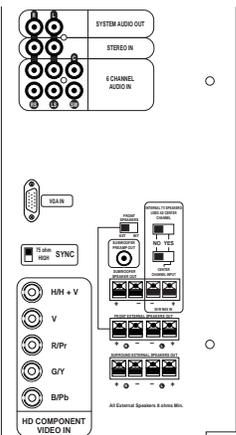

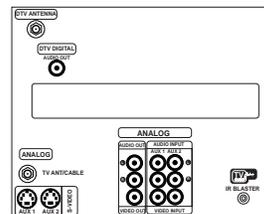

120-Watt Amplifier

Rugged, integrated amplifier provides up to 20 watts amplification for each of the left and right front, center, left and right rear, and subwoofer channels.

Center Channel Input

Since it contains vocal and "steering" information, the center channel is vitally important to overall performance of any large screen in a home theatre system. With standard clip-on style speaker connectors, our center channel input simplifies connection of Dolby® Pro Logic surround sound equipment for optimal home theatre enjoyment.

Rear Audio/Video Jack Panel

HD Component Input

Supports advanced video input for superb color purity, crisp color detail, and reduced color noise—surpassing even that of S-Video! Includes separate gold-plated phono inputs for red, green, blue, horizontal sync and vertical sync.

Rear Connections for Ultimate Flexibility

Connections for external sources and home theater equipment provide the ultimate in flexibility. In addition to separate antenna inputs, connections include inputs formatted for S-Video; composite video; left/right audio; six-channel audio (directly to internal amplifiers); VGA; and high definition component video. Output possibilities include left/right audio; SPDIF; rear speaker connections; front speaker connections; and subwoofer.

Side A/V Jacks for Convenient Casual Connections

Casual connections of cameras or video tape recorders, are easy through the use of convenient side composite video and audio inputs.

VGA/SVGA

Large, impressive multimedia display for professional presentation and games. 15-pin D-sub female connection for multimedia performance at its best.
