

STEREOliO

ANALOG-TO-DIGITAL DJ INTERFACE

THE PERFECT PROBLEM SOLVER FOR ALL DJ'S GIG BAGS. STEREOliO is a connection box that turns analog audio into digital signal. STEREOliO has RCA plugs for use with virtually any audio equipment from DJ mixers to turntables, its other end has a USB connector for your Mac or PC. You can connect any line or phono-level gear to your computer for recording, mixing or processing. Or you can also use STEREOliO as a high quality audio output from your computer to inputs on an analog mixer, enabling you to mix MP3s and other music from a computer in your standard DJ mixer.

FEATURES

- Connect any line or phono device to Mac or PC via USB
- Add USB I/O to any analog mixer and add your computer to your setup
- Low-cost problem-solving tool for DJs and musicians
- Plug-and-play USB connection for Mac and PC requires no software driver installation
- No external power supply needed
