

Thank you for using the IFSYS-5651 MSP430 Bluetooth Evaluation Kit.

The aim of this kit is to help you and your company evaluate the Texas Instruments MSP430 54xx series microcontroller as well as iFoundry's IFSYS-5043 Bluetooth HCI module, and to assist you in creating embedded, low power Bluetooth wireless products.

The IFSYS-5651 Evaluation Kit comes in a package comprising the items described below.

Kit Contents

Item	Description	Qty
1	Getting Started Guide (this document)	1
2	IFSYS-5651 MSP430 Bluetooth Development Board	1
3	USB cable	1
4	Programming cable for IFSYS-5043 module	1

Documentation & Software

Documentation, sample code, utilities and schematics for the IFSYS-5651 board can be obtained from iFoundry's website at the following link:
