

R31S

Dynamic Microphone

Samson's R31S Dynamic Microphone brings great sound and versatility to a variety of live performance applications. Perfect for live vocals, instruments and more, the R10S is engineered to the finest detail to provide any performance with exceptional sound reproduction and accuracy.

The heart of the R31S's performance stems from its shock mounted mic element. Offering high gain output and a low impedance design, the capsule also features a hypercardioid pickup pattern. This enables the R31S to pick up all the nuances of any performance with exceptional clarity and detail, while reducing feedback and unwanted signals.

The R31S offers a frequency response of 50Hz–15kHz, which is ideal for live concert and stage applications. Also equipped to withstand high sound pressure levels, the mic produces vocals that sound huge and crystal clear. This makes the R31S a versatile tool in home recording live performance settings as well.

The R31S features a convenient On/Off switch, as well as an XLR to 1/4" mic cable. For added versatility, a mic clip is also included.
