## Ethernet 5-port switch hn220e

Thank you for choosing the Hewlett-Packard Digital Home Networking Ethernet 5-Port Switch. This *quick start guide* provides easy set-up instructions.

### box contents

- One Ethernet 5-Port Switch
- One AC Power Adapter
- One *quick start guide*
- One warranty sheet

## connecting the 5-port switch

- 1 Verify that all of the box components are included.
- 2 Remove the Ethernet 5-Port Switch and AC Power Adapter from the box.
- 3 Plug the power cable into the **POWER** port on rear panel of the 5-Port Switch as shown in the diagram on the following page.
- 4 Plug the other end of the Power Adapter into an AC wall outlet.
- 5 Make connections according to these options:
  - *Network-ready devices (such as computers, print servers, or the HP Digital Entertainment Center).* Add these devices to your Ethernet network by connecting the Ethernet cable coming from each device to one of the five blue **LAN** ports on the rear panel—see cabling diagram. Do not plug these devices into the UPLINK port.

- *Network infrastructure devices (such as a hub, Gateway, or another switch).* Connect the Ethernet cable coming from the device to the yellow **UPLINK** port of the 5-Port Switch. Since the UPLINK port shares wiring with port 5, port 5 will be disabled if a cable is plugged into the UPLINK port (and vice versa). See the cabling diagram in this *quick start guide* as well as the diagram on the underside of the Ethernet 5-Port Switch.

**Note:** *If the second device also has an uplink port, do not connect its uplink port to the UPLINK port on the 5-port switch. You may use the uplink port on either device, but the other end of the cable must go to a standard Ethernet port on the other device.*
