corega's WLBARGS is an advanced model of broadband Router as well as an IEEE802.11g wireless access point which can speeds up to 108Mbps. Its management interface is straightforward for ease in setting up, while it supports various security features to effectively prevent hackers from attacking your networks, such as firewall, WPA, Mac Address filtering, VPN pass through, hidden ESSID and no respond to the WAN ping function. Different from the dull and usual matchbox design, WLBARGS router is elegantly streamline designed, which is a definitely a plus to this superb device.

1.1 Package Contents

Check the listed contents thoroughly before installation. In case of discrepancy to the list below, check with your local dealers.

- Wireless 108M Boardband router
- Power Adapter
- Detachable Antenna
- Flat UTP cable
- Product stand Kit (with mounting screws)
- Wall mount kit
- User Manual
- Quick Installation Guide

1.2 Features

- Integrated 4 switched 100BASE-TX/10BASE-T auto sensing ports.
- Support Super G mode which can speeds up to 108Mbps
- Built-in NAT and NAPT allowing multiple PCs and network equipments connect to Internet simultaneously for internet gaming, and IM software.
- Allows wireless LAN, and Ethernet LAN to transfer data to each other, and accessing broadband internet.
- WEP(64/128bits), VAN pass through (IPsec, PPTP, L2TP), and WPA-PSK security technology.
- Prevents from hacker attack with massive load of packet attack by easy Firewall (detecting Denial of Service attack), and AP hiding function.
- Supports web-base management interface
- Supports UPnP and supporting on-line broadband applications (Such as Windows Messenger, MSN Messenger, Yahoo Mesenger, Skype, ICQ and etc.)
- Allows external Internet users to access information, and compatible on-line gaming from the internal target host by setting the Virtual Server, and DMZ setting.
- Easy browser setting.

1.3 Hardware Introduction

1. Power LED (Green)
Indicate power status
2. Status LED (Red)
ON: Reboot/Hung up/FirmWare upgrade
3. WAN LED (Green)
ON: Connected
Blink: Transmitting or receiving data
4. Wireless LED (Green)
ON: Wireless function enable
Blink: Transmitting or receiving data
5. LAN LED (Green)
ON: Connected
Blink: Transmitting or receiving data
OFF: Disconnected
6. Detachable Antenna Connector
7. LAN port(1-4)
Connected with PC
8. WAN port
Connected with modem
9. DC IN Socket
Connect with power adapter
10. Initial Button
Press this button it will reset to the default setting.
11. AP/Router Switch Button
Details please refer to Chapter 7.

2.1 WLBARGS should be connecting to PC and modem

Following the steps below to set up WLBARGS and the connection.

- (1) Insert the cable connector into the Network Adapter embedded in PC, and insert the other side into one of LAN ports (1~4) of the Router.
- (2) Insert the connect into the WAN port of the Router and insert the other side into the WAN port of the modem.
- (3) Connect the Power Adapter, and plug in the AC power.

2.2 Installation Procedure

To ensure successful installation, following the below steps after confirming all installation data and/or equipment.

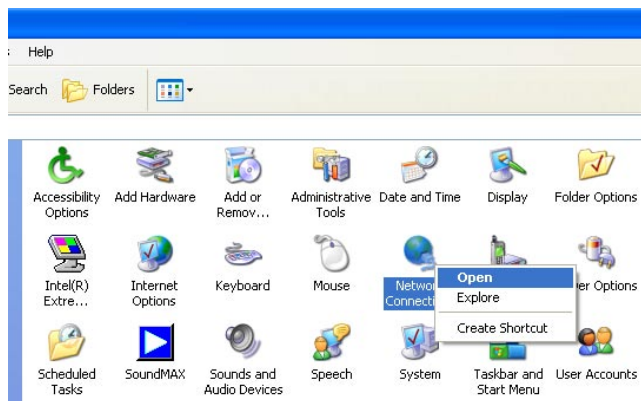

Install the hardware -> PC set-up -> Open the browser (such as IE 6.0), and type [192.168.1.1] in the browser's address bar, and press enter. -> Enter ID: root, and leave Password empty, and press OK. -> Select [Quick Installation Setting] for quick installation->Setting the Wireless Security->Use PC with compatible wireless card for wireless connection.

3.1 TCP/IP Configuration

The following steps and screenshots maybe dissimilar in different operating systems. This manual takes Windows XP/200, 95/98/ME, and Mac O/S as examples:

3.1.1 Windows XP O/S

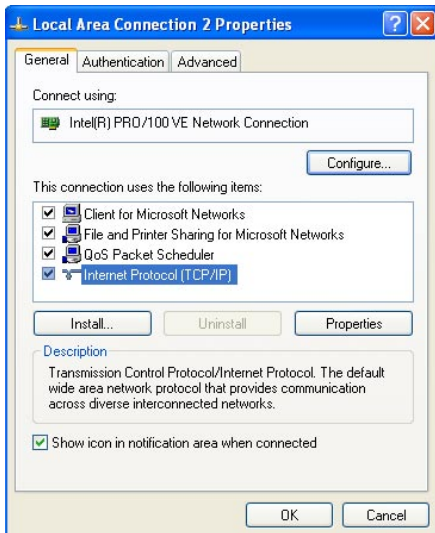

- (1) Enter [Control Panel] -> click [Network Connection] -> right click and select [Open].

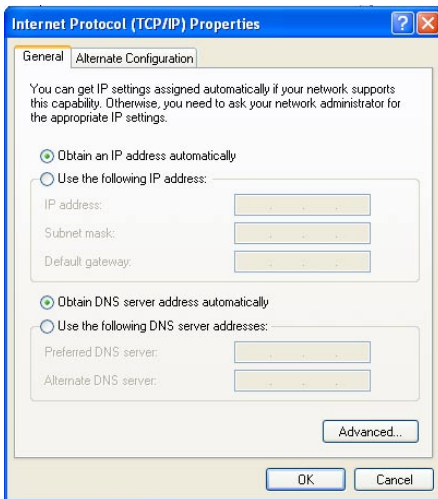

- (2) Click [Local Area Connection] and right click and select [Properties].

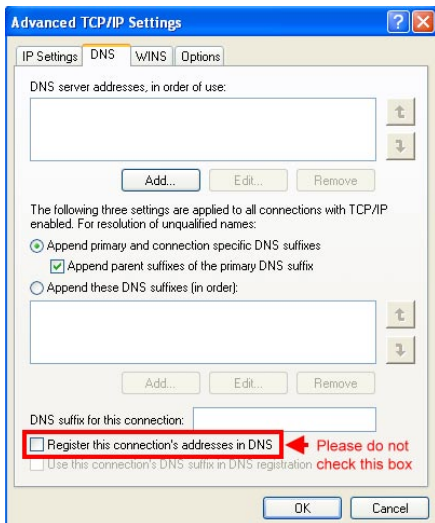

(3) Click [General] -> click [Internet Protocol (TCP/IP), and click [Properties].

(4) Click [General], select [Obtaining an IP Address Automatically], and [Obtain DNS Server address automatically], and press [Advance].

- (5) Click [DNS] tab, unselect [Register this connection's address in DNS], and press [OK].

- (6) Go back to [Internet Protocol TCP/IP] and press [OK].
 (7) Press [OK] to close [Local Area Connection Properties].

3.1.2 Windows 2000 O/S

- (1) Go to [My Computer], and enter [Control Panel], click open [Network and Dial-up Connections].

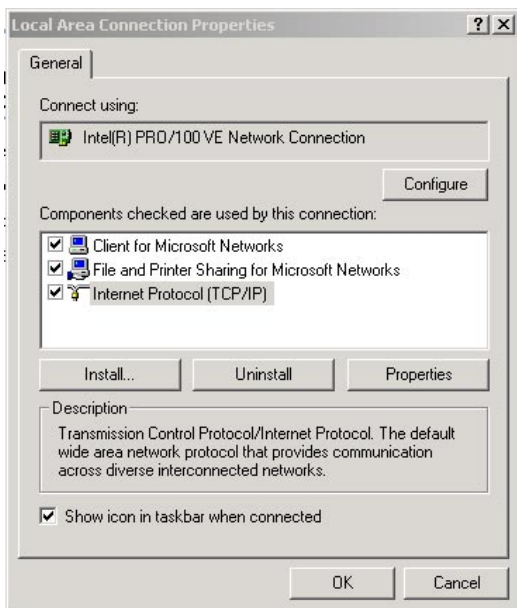

(2) Right click [Local Area Connection], and select [Properties]

*Note: Please check if TCP/IP had been installed in the [Local Area Connection]. If not, consult [Add TCP/IP] steps in this chapter.

(3) Click [Internet protocol (TCP/IP)] and click [Properties].

- (4) Select [Obtain an IP address automatically], and [Obtain DNS server address automatically]. And click [Advance].

- (5) Click [DNS] tab in [Advance TCP/IP setting] page, and unselect [Register this connection's DNS address, and press [OK].

3.1.3 Windows 98/95/ME O/S

The configurations in all Windows 98/95/ME are the same, and this manual takes Windows 98 as an example.

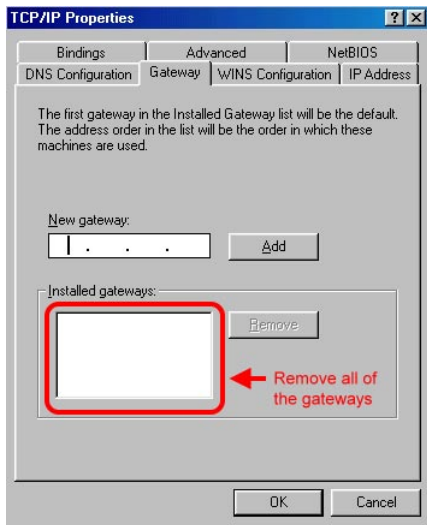

- (1) Enter [Control Panel], and double click [Network].
- (2) Click [Configuration] tab, and select [TCP/IP], click [Properties].

- (3) Select [IP Address], and select [Obtain IP address automatically]. Press [OK].

- (4) Click [Gateway] tab, remove all the gateways, and press [OK] to close the window.

- (5) Go to [Network] and press [OK] to close the page.
 (6) The [Restart the windows] screen will pop-up, press [OK] to restart the PC. If the PC is not shown this message, restart the PC manually.

3.1.4 Mac OS 8.x~9.x O/S

- (1) Open the [TCP/IP] configuration from [Control Panel].
 (2) Select [Ethernet Network] in the [connection methods]; select [DHCP server] in [Configuration], and close this page.

3.1.5 Mac OS X O/S

- (1) Go [System Configuration] in Macintosh category.
 (2) Open [Network] configuration in [System Configuration]. If there is no [Network] configuration, select [Display all].
 (3) Select [Built-in Ethernet] in [Display] from [Network] window. Select [Use DHCP] in [Setting] from [TCP/IP].
 (4) Press [Apply].

3.2 Browser Configuration

3.2.1 Windows O/S

The following examples are for Windows XP O/S, skip this chapter if you are using Windows 200/98/ME.

- (1) Open Internet Explorer (IE 6.0), select [Tools] menu and click [Internet Options]. If a [Dial-up Connection] window is pop-up, close it, and do not connect to the Internet now.

- (2) Click [Connections] tab -> select [Never dial a connection] -> click [LAN Settings].

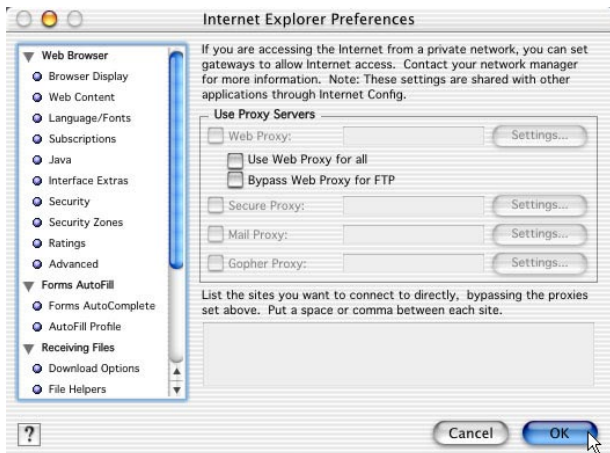

(3) Unselect all three options in the [Local Area Network LAN Setting].

(4) Press [OK] in the [Internet Options].

3.2.2 Mac O/S

- (1) Open Internet Explorer (IE 5.0) Go to [Edit] in the menu bar, select [Internet Explorer Preferences].
- (2) Select [Proxies] options in [Network] on the left-side configuration items.
- (3) Do not select [Web Proxy], press [OK].

4.1 Quick Network Configuration

Basic configuration is required before connection your computer to the internet via WLBARGS. The connection methods may be differed by your contract to the ISP. Please reconfirm your connection conditions with your ISP prior to configure this router. The configuration procedures are as follow:

*Note: Anti-virus or Firewall software may prevent this router from being set-up properly. Please close such software through out the setting of WLBARGS.

(1) Open the Web browser (Internet Explorer 6.0). If you use dial-up network such as PPPoE, and are using Windows 2000/98/ME O/S. The [Dial-up Network] window will pop-up; do not connect to the Internet right now, and close the window.

(2) Type [192.168.1.1] in the browser's address bar, press [Enter].

*Note: [192.168.1.1] is the IP address for configuring CG-WALBARGS, and is not corega's company public internet address. After you have completed the configuration, connect to [http://www.corega-asia.com] for testing the connection.

(3) When log-in screen is appeared, type [root] for the username, and leave empty for the password. Press [Summit].

A screenshot of a login form. It has two input fields: 'Username : root' and 'Password :'. Below the fields are two buttons: 'Submit' and 'Reset'. The entire form is enclosed in a yellow border.

(4) Please select the language. e.g.) English. Click on [Apply].

Language Options/選擇語言

A screenshot of a language selection form. It features a label 'Language' on the left, a dropdown menu showing 'English' with a downward arrow, and an 'Apply' button below.

(5) Please select your region. e.g.) Singapore. Click on [Save].

Regional Options/選擇區域

Region ▼

(6) Click [Quick Installation Setting], and click [Next] to enter the Setup Wizard.

Setup Wizard

Setup wizard will help you to configure your network.
Please have all the networking documents ready.

Please make sure the device is connected with modem, click on **Next**.

(7) When seeing this screen shot, click on [Next].

Setup wizard - Network connection (WAN setting)

Super G Family 802.11n 2T2R 40MHz OFDM 150Mbps

WLU8B2GS
Wireless USB mini PC adapter

WLU8B2GS supports Super G mode, which enhanced the speed up to 150Mbps.
After the complete setup, it is very easy to install and also very convenient for carrying to school, office and wireless network.

WLPCE54GS
Wireless PC/Ethernet adapter

WLPCE54GS supports the IEEE802.11n and 802.11g standard. The higher bandwidth.
It is a smaller external wireless PC adapter, not only easy to install. It is suitable of your wireless network, but also gives you the freedom of wireless networking.

WLCB54GS
Wireless LAN adapter

WLCB54GS gives you full freedom of internet and flexibility of control.
Designed in the 802.11n, its specification is far better and it can reach far more faster than other models.
802.11n is an wireless network based on multiple antennas and multiple channels, designed to provide the best performance.

从此USB网卡开始，从此网络生活更精彩。
これからは毎日が快適インターネット生活

- (8) Select your connection type. Please make sure that your ADSL connection type is correct as you enter; the correct information can be obtained from the documents given by your ISP. If not, consult with your ISP before setting.

Setup Wizard - Network Connection(WAN setting)

Please configure network connection(WAN setting).

Please select your connection type.

Auto obtain IP(DHCP)...e.g.:Cable Modem.

Fixed IP

PPPoE

<Back Next> Cancel

4.1.1 Auto obtain IP (DHCP)

- (1) If you are subscribing to auto obtain IP service (or DHCP Dynamic IP) from your ISP, such as Cable Modem that obtain an IP automatically for connection, please select [Auto obtain IP(DHCP)]. Click on [Next].

Setup Wizard - Network Connection(WAN setting)

Please configure network connection(WAN setting).

Please select your connection type.

Auto obtain IP(DHCP)...e.g.:Cable Modem.

Fixed IP

PPPoE

<Back Next> Cancel

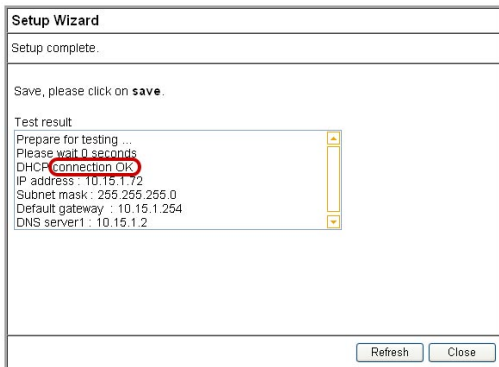

- (2) Press [Mac address clone] to obtain the Ethernet card's Mac address. Then press [Next].

The screenshot shows a dialog box titled "Setup wizard - auto obtain IP address". Below the title bar, it says "Please manually setup your network." There is a section for "WAN port MAC address" with six input fields containing the values "00", "50", "BF", "E7", "92", and "0F". Below these fields is a button labeled "Mac address clone" which is highlighted with a blue border. At the bottom right of the dialog are three buttons: "<Back", "Next>", and "Cancel".

- (3) Click on [Save] to perform connection tests.

The screenshot shows a dialog box titled "Setup wizard". Below the title bar, it says "Setup completed." and "Save, please click on **save**." There is a section labeled "Result" with a text area containing "Prepare for network testing...". At the bottom right of the dialog are three buttons: "<Back", "Save", and "Close".

- (4) Within seconds, the result of the connection test will be appeared in the dialogue box to indicate the connection status. When [Connection ok] appears, click on [Close].

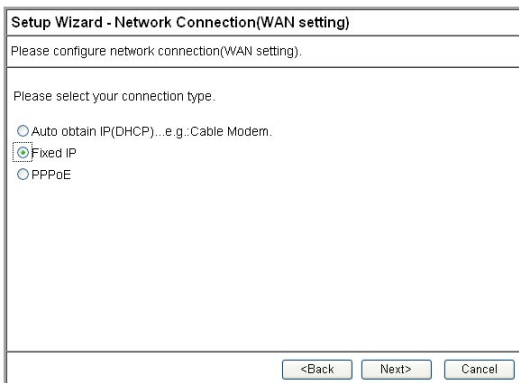

- (5) Open the web browser (IE 6.0), and test with any website for testing the connection.

* Note: if the connection to the website fails. Restart your Cable Modem, and check the installation of CG-WLABARGS properly, such as the LAN/WAN connections. After verifying that, restart this chapter again for installation.

4.1.2 Fixed IP

- (1) If you are subscribing Fixed IP connection from your ISP, then select [Fixed IP], and click on [Next].

- (2) Configure the network setting provided by your ISP. Then click on [Next].

Setup wizard - Fixed IP address

Please manually configure your network.

Please configure your network from information provided by your ISP.

WAN port ip address : . . .

Subnet Mask : . . .

Default Gateway : . . .

DNS Server1 : . . .

<Back Next> Cancel

- (3) Click on [Save] to perform connection tests.

Setup wizard

Setup completed.

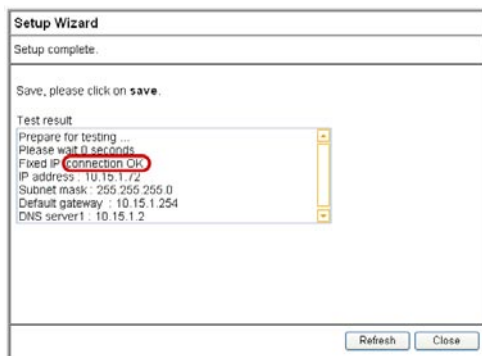

Save, please click on **save**.

Result

Prepare for network testing...

<Back Save Close

- (4) Within seconds, the result of the connection test will be appeared in the dialogue box to indicate the connection status. When [Connection OK] appears, click on [Close].

- (5) Open the web browser (IE 6.0), and test with any website for testing the connection.

*Note: If the connection to the website fails. Please make sure the data you entered are correct, or any mistake occurred in the process of the installation, such as the LAN/WAN connections. After verifying that, repeat these setps in the section.

4.1.3 Dynamic IP (PPPoE)

- (1) If you are subscribing dynamic IP connection (or known as PPPoE) from your ISP, you need to obtain a set of username and password from your ISP and acquire a IP address each time your connect to the Internet, select [PPPoE], and then Next].

- (2) Enter the username and password provided by your ISP, and click on [Next].

Setup Wizard - PPPoE

Please configure your network from information provided by your ISP.

Please enter your password and username which are given by your ISP.

Username :

Password :

Password Confirmation :

<Back Next> Cancel

* Note: If you are a Hinet subscriber, type @hinet.net following the 8-digit account number, for instance: xxxxxxxx@hinet.net. Be careful, username and password are sensitive to capitals.

- (3) Click on [Save] to perform connection tests.

Setup wizard

Setup completed.

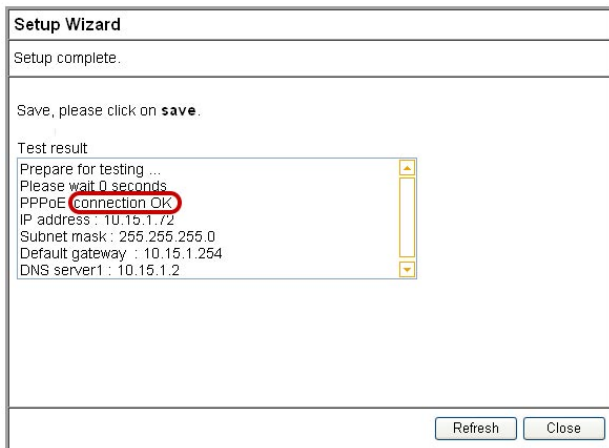

Save, please click on **save**.

Result

Prepare for network testing...

<Back Save Close

- (4) Within seconds, the result of the connection test will be appeared in the dialogue box to indicate the connection status. When [Connection OK] appears, click on [Close].

- (5) Open the web browser (IE 6.0), and test with any website for testing the connection.

***Note:** If the connection to the website fails. Please make sure the data you entered are correct , or any mistake occurred in the process of the installation, such as the LAN/WAN connections. After verifying that, repeat these setps in the section.

4.2 Establishing Wireless Internet Connection

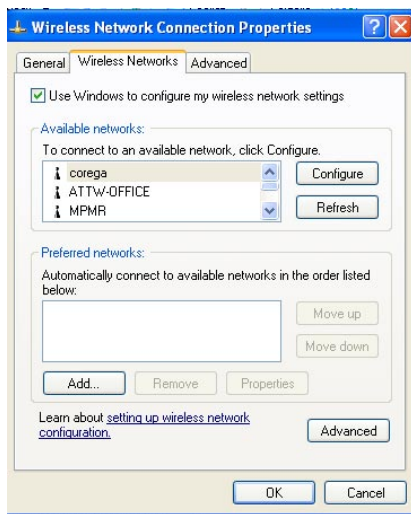

So far, you should be able to connect to the Internet wirelessly. However, please be reminded that your network is not safe and the connection is open to anyone. Please consult [Chapter 5 Wireless Security Configuration] for security setting. Wireless connection are illustrated as follows.

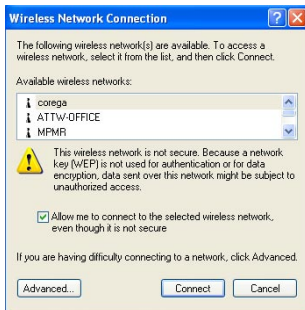

Hereunder is the setting on Centrino Notebook as an example, for wireless adapters in other brands, please refers to the original manuals.

<Windows XP (SP1) O/S>

- (1) Go [Control Panel] -> double click on [Network connection] -> right click on [Wireless Network Connection] -> select [properties] -> click on [Wireless Network] tab -> select [Use Windows to configure my wireless networks setting] , and press [OK].

- (2) Go [Control Panel] - [Network connection] again -> click [Wireless network connection] and hold right button to select [Available wireless network connection], choose one available network e.g.) corega , and click [Connect].

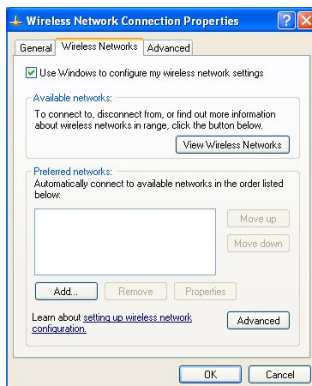

- (3) Connection status will appear in the bottom right of the screen.

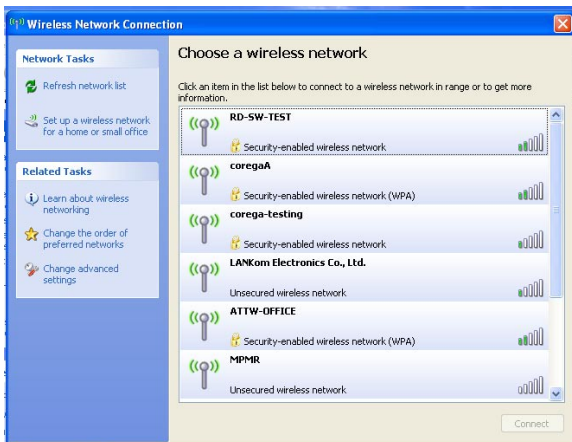

<Windows XP (SP2) O/S>

- (1) Go [Control Panel], double click on [Network connection], right click on [Wireless Networks Nonconnection], select [properties], click on [Wireless Network] tab, select [Use Windows to configure my wireless networks setting] , and press [OK].

- (2) Go [Control Panel] - [Network connection] again -> click [Wireless network connection] and hold Mouse's right button to select [Available wireless network connection], e.g.) corega , and click [Connect].

- (3) Connection status will appear in the bottom right of the screen.

*Note: The wireless connection has been established now. Please go to corega's website at <http://www.corega-asia.com> to check the connection to the Internet.

To prevent from unlawful access to your network, you are recommended to perform wireless security setting. Enter the function menu, and click on [802.11g/b Security setting] item. And select WEP or WPA setting.

5.1 WEP Setting

In order to prevent your information from being hacked, it is recommended to use WEP encryption when using wireless connection.

- (1) [Open System] or [Shared Key]. Select [Open System] or [Share Key] from Authentication menu.
- (2) Select [WEP] from Cipher menu
- (3) Select [64-bit], [128-bit], or [152-bit] from the Encryption menu.
- (4) Type encryption code in [Key1].

*64 bit: hex (0~9, a~f), 10 digits in total.

*128 bit: hex (0~9, a~f), 26 digits in total.

*152 bit: hex (0~9, a~f), 32 digits in total.

Or you can click [Generate Key] to obtain a password automatically:

- a. Enter any character in the column of [Auto generate WEP].
- b. Click [Generate Key].
- c. Passwords will be generated automatically in the columns of Key1 ~ Key4.

*P.S. Every kind of network adapter might have different encryption ways, so [Generate Key] isn't recommended. Check before selection.

- (5) Recommended to keep default values of [DTIM] and [Preamble Mode].
- (6) Save your settings by [Apply].
- (7) Parameters can be output by [Output Info.]

5.2 WPA Setting

WPA is encrypted by a periodic update, making it more difficult to be hacked. Home users and company users are recommended to use <WPA-PSK> and <WPA-EAP> respectively.

<WPA-PSK>

- (1) Select [WPA2-PSK] or [WPA/WPA2-PSK] in the column of [Authentication] (Recommended).
 - a. [WPA2-PSK]: The 2nd generation encryption technology performs stricter protection than ever. Before selection, please check the function availability of your network adapter, or select b.
 - b. [WPA/WPA2-PSK]: If selected, encryption type will be defined automatically according to the corresponding wireless network adapter.

- (2) Select [Cipher Type]. (Recommended to keep the default.)

*Note: The wireless network adapter is required to have the same setting; otherwise, the connection will fail.

- (3) After selecting [WPA shared key], key in the Pre-Shared-Key in connection with the communication device in the below column. Please enter 8~63 alphabets or numbers.

* Note: The password of the device in connection with the product must be the same; otherwise, the connection doesn't work out.

- (4) Recommended to keep default values of [DTIM]and [Rekey Interval].
- (5) Press [Apply] to save setting.
- (6) Parameters can be output by [Output Info].

<WPA-EAP>

- (1) Select [WPA2-EAP] or [WPA/WPA2-EAP](Recommended).in the column of [Authentication]
 - a. [WPA2-EAP]:The 2nd generation encryption skill performs stricter protection than before. Before selection, please check the function availability of your network adapter, or select b.
 - b. [WPA/WPA2-EAP]: If selected, encryption type will be defined automatically according to the corresponding wireless network adapter.

- (2) Select [Cipher Type] (Recommended to keep the default).

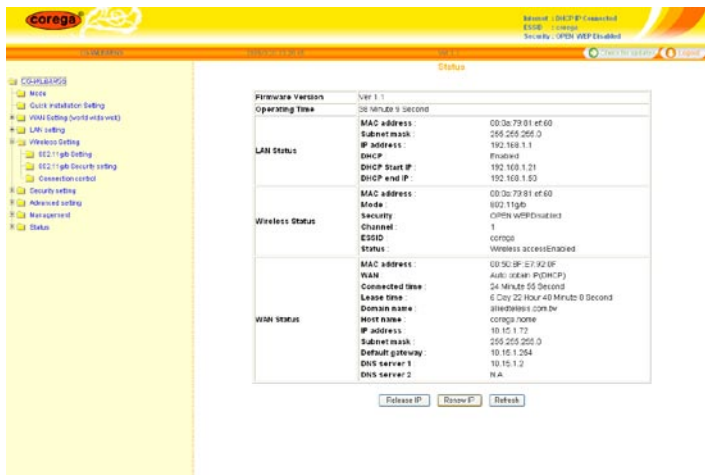

*Note: The wireless network adapter is required to have the same setting; otherwise, the connection can't succeed.

- (3) Recommended to keep default values of [DTIM] and [Rekey Interval].

- (4) You may click [RADIUS Server] for parameter settings, but check with MIS staff before setting.
- (5) Save your settings by [Apply].
- (6) Parameters can be output by [Output Info].

The chapter will briefly introduce all functions of this product, and spell them out. Log in the management program and the below interface will appear.

<LAN setting/PC database>

the following table display the current connected users information, you can add/edit/delete users data.

PC database

PC name	IP address	Type	MAC address	DHCP Client	Operate
ALLIED-SANDY	192.168.1.21	LAN	00:50:BF:E7:92:0F	Auto obtain (DHCP client)	Edit

*Add a pc data : click on [add] to add a new user data.

LAN setting / PC data (advanced setting)

add / edit / delete PC list

If new added pc cant be connected, please enter its MAC address.

1

PC name :

IP address :

- Automatic (DHCP client) :
- Reserved (DHCP client) :
- Fixed IP address (Set on PC) : . . .

Connection Type

2

MAC address : Auto searching (connection mode)

MAC address : - - - - -

3

- (1) Enter the pc name and select network connection type.
- (2) Configure the mac address data.
- (3) Click [Add PC Data] to complete the setting.

<Wireless setting/802.11g/b setting>

Wireless setting /802.11g/b setting.

ESSID	<input type="text" value="corega"/>
Mode	802.11g/b ▾
Channel	Auto setting ▾
SuperG mode	Disable ▾
eXtended Range	Enable ▾
Transfer rate	Auto setting ▾
Hidden AP	Disable ▾
Transmit power	Maximum ▾

ESSID	Default ESSID is [corega].
Mode	. 802.11b/g: auto connect in either 802.11b or 802.11g. . 802.11g: connect in 802.11g (54Mbps) mode.
Channel	When there is interruption, other channels can be selected.
SuperG mode	If your Wireless LAN Card supports Super G Mode transmit rate. You can use this function to increase wireless throughput.
eXtended Range(XR)	When it's enabled, it can extend the transmission range, however, it may also decrease the datarate.
Transfer rate	Select data rate. Default is [Auto setting].
Hidden AP	when it's enabled, ESSID will not be seen in the network.
Transmit power	It is for adjusting the transmit power.

<Wireless setting/802.11g/b security setting>

This section contains WEP,WAP-PSK, WPA2-PSK, WPA-EAP and WPA2-EAP encryption setting, please refer to Chapter 5 to get detail information.

<Wireless setting/Access control>

Wireless Setting / Access Limitation

Wireless to wireless connection. Wireless to wire connection. MAC address filter list.

Only allow authorised client to access

To configure authorised clients, please edit/add from client database.

PC Name	IP Address	MAC Address	DHCP Client

Wireless to wireless communication	Configure wireless communication between clients. [Enable]/[Disable]: enable or disable wireless communication between clients.
Wireless to wire communication	Configure wireless and wired communication between clients. [Enable]/[Disable]: enable or disable connection between wireless and wired communication.
MAC address filter list	Use MAC address filter to control network communication. [Enable]: only users on the list can access the network. [Disable]: all users can access the network.

<Security setting>

Configuring firewall and no response to Wan Ping requests.

Security Setting

Not response to WAN ping request.	<input type="button" value="Enable"/>
Firewall	<input type="radio"/> High Security <input checked="" type="radio"/> Medium Security <input type="radio"/> Low Security

<Security setting/Connection control>

This function can limit or control some certain networking services:

- (1) Enter the range of limited IP address.
- (2) Select one of limit/stop networking services.

<Advanced setting/virtual server>

Virtual server is an appointed port opened by the PC in connection with the product, allowing other users connecting up via WAN. Open servers or special online games can take advantage of this function. Setting processes are as follows:

- (1) Select a PC to be the virtual server.
- (2) Select Service.
- (3) Enter Port Range of internet connection with the server, and Port Range used by the server software.
- (4) Select Protocol.
- (5) [Remark] column can be filled in with an explanation of the server.
- (6) Click [Add] after setting. All info will show in the below table.

Advanced Setting / Virtual Server

Connecting with a pc. 1 Please select a PC

Service 2 User Definition

Port Range 3 - (1-65535) Advanced Setting

Protocol 4 TCP

Remark 5

6

Status	Connecting with a pc.	Service	LAN Port	WAN Port	Protocol	Remark	Apply
<input type="button" value="Back"/>							

<Advanced setting/DMZ>

If the online game's port range is unknown, or its parameter is different every login, DMZ function is recommended. While this function starts, select the users, being allowed to connect with, then click [Apply] to save.

Advanced Setting / DMZ

DMZ Server Please select PC.

*Note:

1. The PC becomes vulnerable to being hacked if DMZ function starts. Please only use it in need.
2. The PC with DMZ function needs a fixed IP address.
3. DMZ function can only be used in one PC.

<Advanced setting/UPnP setting>

Activating this function can detect the device or software of LAN, supporting UPnP. For example: online games supporting UPnP or Windows Messenger (Ver. 4.7 or above), MSN Messenger (Ver. 5.0 or above) and so forth. Set its status usable. The default value is [Enable].

Advanced Setting / UPnP

Use UPnP	Enable

Management

Admin login name	<input type="text" value="root"/>
Admin login password	<input type="password"/>
Password confirmation	<input type="password"/>
Connection Timeout	10 <input type="text"/> Minute(10 ~ 300)
Timezone	(GMT-08:00) Pacific Time (US & Canada); Tijuana
Time setup	Auto setup
Back to default setting.	<input type="button" value="Proceed"/>
Reboot	<input type="button" value="Proceed"/>
Save setting	<input type="button" value="Save"/>
Load setting	<input type="button" value="Load"/>
Firmware update	
Remote control	
PING testing	

Admin login name	User name for login this management program. Default setting is [root].
Admin login password	Default password is empty.
Password confirmation	Please retype password.
Connection Timeout	Enter connection time-out time.
Time setup	The default value is [Auto Setup].
Back to default setting	Click [Proceed] to restore all default values.
Reboot	New changes only effect after the system reboots.
Save Setting	Click [Save] to save your setting values as a file.
Load Setting	Click [Load] to load the files of your setting values that you saved earlier.
Firmware update	Please refer to *Firmware update.
Remote control	Please refer to *Remote control.
PING testing	Please refer to *PING testing.

*Firmware update

- (1) Click [Browse] to open the data folder. Follow the route that the firmware saves to select the file.

- (2) After selection, click [Firmware update].
- (3) When the countdown starts, do not click any button. The update will complete soon afterward.

Updating firmware
Please dont shut down power while updating.
Still have 377 seconds remaining, please wait.

- *Note: You may proceed [Check for updates] to look up the latest firmware from corega's web page.

***Remote control**

The setting allows accessing the management program via remote control.

Management / Remote control

Remote control	1	Disable
Port	2	8080 (1 ~ 9600)

3

The activation processes are as follows:

- (1) Select [Enable].
- (2) Indicate 1 ~ 9600 for parameters of port range. e.g.) 8080 (Recommended keeping default values).
- (3) Click on [Apply] after completing settings.
e.g.) Assume the port value is 8080, enter IP address as the type :
[http://xxx.xxx.xxx.xxx:80] to access the management program by remote control.

***PING testing**

Enter the IP address into the [Target IP Address] box, then click on [Apply]. It will display the result the ping testing result.

Management / PINGTesting

Target IP Address:

* According to result, it takes around few seconds.

Target IP	No data.
Result	Not yet proceed

***Cable testing**

Click [More information] to check the status of connection speed.

Management / Cable Testing

6.2 Additional Functions

Besides the functions displayed in the tables, there are some additional features available to set up. Please open the IE browser and enter 192.168.1.1/core_rc.php into the address bar to access the page of addition features.

<Advanced Setting/Backup DNS>

Two DNS server addresses can be set in the table. If the primary DNS server does not function, the system will use them as secondary addresses.

Advance Setting / Backup DNS

Backup DNS	Disable
DNS Server	<input type="text"/> . <input type="text"/> . <input type="text"/> . <input type="text"/>
DNS Server	<input type="text"/> . <input type="text"/> . <input type="text"/> . <input type="text"/>

<Advanced Setting/Routing/Static Routing>

Add/ Edit/ Delete static router can be set in the table. After key-in of static router information, click [Save]. The setting log will be displayed afterward.

Advanced Setting / Routing / Static Routing

Network Address	<input type="text"/>
Subnet Mask	<input type="text"/>
Default Gateway	<input type="text"/>

Network Address	Subnet Mask	Default Gateway	Apply
<input type="button" value="Back"/>			

<Advanced Setting/ Routing/ Dynamic Routing (RIP)>

The table allows dynamic routing setting. Select RIP version in the below columns (this product supports RIPv1 and RIPv2), then [Apply] to complete the setting.

Advanced Setting / Routing / Dynamic Routing (RIP)

LAN RIP Transferring	RIPv1
LAN RIP Receiving	RIPv1

<Advanced Setting/ Routing/Routing Table>

All dynamic routing logs are displayed in the table.

Advanced Setting / Routing / Routing Table

Destination	Subnet Mask	Default Gateway	Interface
192.168.1.0	255.255.255.0	*	LAN
10.15.1.0	255.255.255.0	*	WAN1
239.0.0.0	255.0.0.0	*	LAN
default	0.0.0.0	10.15.1.254	WAN1

If you would like to use AP (Access Point) function, please use the switch button in the bottom of the product. The operations are as the below:

- (1) Cut off the power.
- (2) Switch AP/Router to the left (AP side).

- (3) Plug in the product.
- (4) Now the product is in AP mode. Open browser to access setting page and enter [192.168.1.220] into the address bar, then press [Enter].

**** Warning ****

This is a special application. In AP mode, the product stops to generate IP, WAN port doesn't function and LAN port also becomes a normal hub, so users are recommended to keep its router function.

When the installation fails or the connection doesn't succeed, it's recommended to take the following actions against the problems.

- (1) Find your problem in the troubleshooting collection.
- (2) Go to our official website at <http://www.corega-asia.com>, then click [Support] and click the [Online Customer Support] item. To fill the form page and note following information We will contact you as soon as possible.

- Product name: e.g.) WLBARGS(R)
- Firmware version: access the management program to check.
- Your ISP service name.
- Windows system: e.g.) Windows98/2000/XP and so on.
- WEB browser(Version): e.g.) IE5.0/5.5/6.0 and so on.
- Network adapter manufacturer and its driver version.
- Connection way: fixed IP, dynamic IP or PPPoE dial-up connection.
- What are your problem and situation: e.g.) unable to internet.
- What is the error message or picture?

Q1. Not able to connect to the Internet.

Please make sure if the below processes are complete or not.

- (1) Is your subscription to ISP expired?
- (2) Have the powers of all relevant devices been switched on, or have cables or plugs been connected correctly?
- (3) Has the line between the modem and internet been connected correctly?
- (4) Have the cable lines among the modem, product and PC been connected correctly?
 - => When the product and modem have been connected correctly, WAN LED will light up. If no light, please remove cable line, then re-plug in. If the modem has a MDI/ MDI-X button, please try to switch it.
 - => When the connection between PC and the product is normal, the Link/ Act LED of the front LAN port will light up after the PC's power is turned on.
- (5) Has the connection with ADSL's splitter been linked up correctly (There are two kinds of splitter: 'Telephone' and 'ADSL modem')?
- (6) Does the PC's network adapter function normally?
 - => Right click on [My Computer] and select [Content] => [Administrator] => Display[Network adapter]. If there is a marking of X or !, it means that the network adapter doesn't perform normally. Please re-install it.
- (7) Is your network setting correct?
 - => Check if TCP/IP setting is correct or not (Please refer to [3.1 TCP/IP Configuraton to check your setting].
- (8) Has all information provided by your ISP been entered correctly?

(9) Are the settings of your web browser correct?

Q2. Not able to log in the management program.

A: You have 4 ways to check and solve the problem:

- (1) Close and re-open the IE browser and login the program again.
- (2) Log out and re-login the Windows OS. Then login the program again.
- (3) Probably the management program is accessed from the other user. Wait until that user exits the program.
- (4) Reset to default settings (Refer to Q8. for more details) and re-login the program.

Q3. Forget the password.

A: If you ever changed the password of the management program, please enter the one you set. If you forget the password, please reset to default settings .Please referre to Q8 for more details.

Q4. How to set or change the password of the management program?

A: Access the management program, and then click [Management]. Enter new password in the columns of [Admin login passowrd], and [password confirmation], then click [Apply]. When you re-access the management program, you must enter new username and password (The default username is [root] and no password.).

Q5. Failure in firmware update.

A: If the firmware update fails, please contact us by Online Customer Support webpage. Please go to the website of <http://www.corega-asia.com> -> click on [Support] and right click the [Online Customer Support] item -> Filling the form -> Click [Submit].

Q6 How to acquire your PC's IP address?

A: If you want to check your PC's IP address via the product, you may refer to the below steps:

<Windows XP/ 2000>

- (1) Click [Start] => [Programs] => [Command prompt].
- (2) Input [ipconfig] => [Enter].
- (3) Confirm IP address (which could be 192.168.1.x). If the ip is not incorrect, please enter 1-byte character as [ipconfig /renew] => Press [Enter].

<Windows Me/ 98/ 95>

- (1) Click [Start] => Click [Run].
- (2) Input [winipcfg] in the column => press [Enter].
- (3) Select your network adapter to display IP address. The IP should be 192.168.1. x ,if none, please click [Release] => Click [Renew].

Q7. How to reboot the product?

A: Reboot to get new setting values applied. The steps are as follows: open the management program-> Click on [Management]-> Click on [Proceed] in the [Reboot] column .

*Note: The definitions of [Reboot], [Firmware update], and [Reset to default settings] are different. Please make sure of your intention before proceeding.

Q8: How to reset to default settings?

A: If you forget the password, get failed in setting or product hang up; you can reset the product's settings to default values. There are 2 ways for setting:

*** Use hardware**

- (1) Use a spindle item (e.g. a clip) to press [Init button] in the back side of the product until [Status] lights up with red.
- (2) After the red light goes out, the system will restore its default values.

*** Use software**

- (1) Click on the [Management] function item -> click on [Back to default setting] item from the setting page -> Click on [Proceed] to reset to default settings.

corega可瑞加科技於1996年成立於日本新橫濱，致力於提供多元化的家用網路產品：包括乙太網路交換器、無線區域網路系列產品、路由器、藍芽系列產品、以及與網路相關的產品應用及服務。corega目前已是日本專業家用網路產品的暢銷品牌，並且於2002年2月於台北成立可瑞加科技，專注於台灣市場推廣高品質的日系家用網路設備。corega以使用者的需求導向為最重要的營運方針，多樣化的產品行銷以及通路服務營造corega為最親切適用的家庭網路設備第一品牌！

竭誠感謝您購買corega可瑞加系列產品，期待本產品為您帶來更快速便捷的連線體驗，更期盼日後您家用網路擴充/升級的機會，corega能繼續陪伴您！

corega K.K. designs, develops and markets professional networking products that address the specific needs of small and medium enterprises and home user's easy-to-use, quality and reliable services of networking solutions requirements.

Established in 1996, corega 100% founded by Allied Telesis Group in Yokohama, Japan. corega's core products consists of 10/100/1000 Ethernet products, Wireless Networking Products(802.11 a/b/g series), broadband access routers, Bluetooth series and other networking peripheral, such as IP camera and USB Phone.

Thank you again for purchasing corega's products. Wish you would enjoy the powerful and friendly corega connecting experience!!

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

IMPORTANT NOTE:

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

IEEE 802.11b or 802.11g operation of this product in the U.S.A. is firmware-limited to channels 1 through 11.
