Selectronic
Mixer Shower**
blurs the
boundaries.

Fits to almost any plumbing system on virtually any pressure. Sleek design with a patented 'through the ceiling' connection - for one of the quickest installation times on the market.

- **No fuss**
- **No problems**
- **No wasted time**

selectronic
mixer shower 

Adjustable 3 function Traditional, Pulsator and Aerator Showerhead for pressures 0.2 - 7 bar.

Traditional

Aerator

Pulsator

Single function showerhead for pressures 0.1 - 7 bar especially gravity fed sites. Rub clean.

The Product

The Redring Selectronic Mixer Shower features a unique hot and cold water connection design and uses the highest quality components. This TMV3 approved thermostatic Redring Selectronic Mixer Shower offers a superb temperature response, with automatic shutdown if the cold or hot water supply fails. In addition and by utilising the riser rail to route the hot and cold supplies through the ceiling this shower has one of the quickest installation times on the market.

Key Features

Perfect for retrofit or a brand new bathroom - minimal disruption

- TMV3 approved thermostatic shower valve
- Very quick to install
- Hot and cold supplied down riser rail

Specifications

- Suitable for rooms with ceiling heights up to 2.5 metres
- Overall height: 1100mm

Technical

Easy and fast installation

Simply connect to water supplies within roof cavity

Includes pre-assembled hot and cold feed pipes plus isolating valves with filters

- No channel pipe to cut
- Easy two point mounting
- 15mm copper pipes suitable for all connections including push-on, compression and soldered joints
- Pipes rotate for easy alignment

Dimensions

Pressure Requirements

The Redring Selectronic Mixer Shower assembly can be used on systems with pressures from 0.1 bar (1 metre head) to 7 bar. The maximum hot to cold pressure differential should NOT exceed 2 bar at higher pressures or 0.2 bar at very low pressures. For pressures in excess of 7 bar a pressure regulator should be fitted.
