# Hardware Identification & Torque Specifications

## Common Hardware Types

## Standard Hardware Sizing

When a washer or nut is identified as  $1/2''$ , this is the *Nominal size*, meaning the *inside diameter* is  $1/2$  inch; if a second number is present it represent the *threads per inch*

When bolt or capscrew is identified as  $1/2 - 16 \times 2''$ , this means the *Nominal size*, or *body diameter* is  $1/2$  inch; the second number represents the *threads per inch* (16 in this example, and the final number is the *body length* of the bolt or screw (in this example 2 inches long).

**The guides and ruler furnished below are designed to help you select the appropriate hardware and tools.**

### NOTES

- These torque values are to be used for all hardware excluding: locknuts, self-tapping screws, thread forming screws, sheet metal screws and socket head setscrews.
- Recommended seating torque values for locknuts:
  - for prevailing torque locknuts - use 65% of grade 5 torques.
  - for flange whizlock nuts and screws - use 135% of grade 5 torques.
- Unless otherwise noted on assembly drawings, all torque values must meet this specification.
