NOTICE

IF, DURING THE WARRANTY PERIOD, THE CUSTOMER USES A PART FOR THIS ENODIS EQUIPMENT OTHER THAN AN UNMODIFIED NEW OR RECYCLED PART PURCHASED DIRECTLY FROM FRYMASTER DEAN, OR ANY OF ITS AUTHORIZED SERVICE CENTERS, AND/OR THE PART BEING USED IS MODIFIED FROM ITS ORIGINAL CONFIGURATION, THIS WARRANTY WILL BE VOID. FURTHER, FRYMASTER DEAN AND ITS AFFILIATES WILL NOT BE LIABLE FOR ANY CLAIMS, DAMAGES OR EXPENSES INCURRED BY THE CUSTOMER WHICH ARISE DIRECTLY OR INDIRECTLY, IN WHOLE OR IN PART, DUE TO THE INSTALLATION OF ANY MODIFIED PART AND/OR PART RECEIVED FROM AN UNAUTHORIZED SERVICE CENTER.

NOTICE

Drawings and photos used in this manual are intended to illustrate operational, cleaning and technical procedures and may not conform to on-site management operational procedures.

 WARNING

Improper installation, adjustment, alteration, service or maintenance can cause property damage, injury or death. Read the installation, operating and maintenance instructions thoroughly before installing, operating or servicing this equipment.

 DANGER

Hot vegetable oil will cause severe burns. Allow vegetable oil to cool to 100°F (38°C) before transporting to the disposal site. Use extreme caution when transporting and disposing of spent vegetable oil.

 DANGER

Before each use inspect the cover to ensure the cover gasket is present and properly placed. DO NOT use the disposal unit if this gasket is damaged or missing.

VEGETABLE OIL DISPOSAL UNIT (MSDU) INSTALLATION, OPERATION, SERVICE, AND PARTS

1. INTRODUCTION

1.1 Service Information and Parts Ordering

Included with the unit when shipped from the factory is a list of Factory Authorized Service Centers (FASCs). Refer to this list to find the FASC nearest you. If you do not have access to this list, contact the Frymaster Technical Service Department at 1-800-24-FRYER (1-800-243-7237) or 1-318-865-1711.

Service information may be obtained by contacting your local FASC. Information may also be obtained by calling the Frymaster Technical Service Department at 1-800-24-FRYER (1-800-243-7237) or 1-318-865-1711 or e-mail: service@frymaster.com. In order to assist you as quickly as possible, the FASC or Service Department representative requires certain information about your equipment. The information is printed on a data plate located on the tank cover. When requesting service, please have the following information ready:

Model Number: _____
Serial Number: _____

In addition to the model number, and serial number, please be prepared to describe the nature of the problem and have ready any other information that you think may be helpful in solving your problem. Parts orders may be placed directly with your local FASC or distributor. When ordering parts, the following information is required:

Model Number: _____
Serial Number: _____
Item Part Number: _____
Quantity Needed: _____

RETAIN AND STORE THESE INSTRUCTIONS IN A SAFE PLACE FOR FUTURE USE.

1.2 Installation, Operating and Service Personnel

Installation, Operating, and Service information for this equipment has been prepared for use by qualified and/or authorized personnel only, as defined in Section 1.3.

1.3 Definitions

QUALIFIED AND/OR AUTHORIZED OPERATING PERSONNEL

Qualified/authorized operating personnel are those who have carefully read the information in this manual and have familiarized themselves with the equipment functions, or who have had previous experience with the operation of the equipment covered in this manual.

QUALIFIED SERVICE PERSONNEL

Qualified service personnel are those who are familiar with this equipment and who have been authorized by Frymaster L.L.C. to perform service on equipment manufactured by Frymaster. All authorized service personnel are required to be equipped with a complete set of service and parts

manuals, and to stock a minimum amount of parts for Frymaster equipment. A list of Factory Authorized Service Centers (FASCs) was included with this equipment when shipped from the factory. *Unless specifically indicated otherwise in this manual, failure to use qualified service personnel will void the Frymaster Warranty on this equipment.*

1.4 Shipping Damage Claim Procedure

This equipment was carefully inspected and packed before leaving the factory. The transportation company assumes full responsibility for safe delivery upon acceptance of the equipment for transport.

1.5 What To Do If Your Equipment Arrives Damaged

- 1. File a claim for damages immediately**, regardless of the extent of damages.
- 2. Inspect for and record all visible loss or damage** and ensure that this information is noted on the freight bill or express receipt and is signed by the person making the delivery.
- 3. Concealed loss or damage** that was unnoticed until the equipment was unpacked should be recorded and reported to the freight company or carrier **immediately** upon discovery. A concealed damage claim must be submitted within 15 days of the date of delivery. Ensure that the shipping container is retained for inspection.

**Frymaster DOES NOT ASSUME RESPONSIBILITY
FOR DAMAGE OR LOSS INCURRED IN TRANSIT.**

1.6 Warranty Statement

WARRANTY PROVISIONS

- Frymaster L.L.C. warrants all components of the MSDU against defects in material and workmanship for a period of one year (parts only).
- This warranty is void if equipment is found by Frymaster L.L.C. to have been subjected to alteration, misuse, or abuse.

PARTS RETURN

All defective in-warranty parts must be returned to a Frymaster Factory Authorized Service Center (FASC) within 60 days for credit. After 60 days, no credit will be allowed

2. ASSEMBLY AND OPERATION

2.1 Equipment Description

The Vegetable Oil Disposal Unit (MSDU) is designed for the safe transportation of used cooking oil from the kitchen to a disposal container. The MSDU holds to 50 pounds/23 kg of cooking oil. The unit consists of a tank to receive waste oil from a fryer and a heavy-duty manual pump for

transferring the oil to a disposal container. It is equipped with 7" (178 mm) wheels and a foldable handle. The pump is mounted at a convenient height that allows it to be operated from a standing position. The height of the discharge pipe allows pumping directly into a standard 55-gallon drum.

With the cover open, the top of the MSDU tank is 9¾ inches (248 mm) above the floor, permitting it to be positioned directly beneath the drains of McDonald's fryers. (**NOTE:** The tanks on MSDUs built before January 2004 are 11½ inches (292 mm) high.). If using an MSDU built before January 2004 the filter pan cover on BIPH14/MPH14 Series or BIPH52/MPH52 Series fryers must be removed to allow the unit to be positioned beneath the drain.

2.2 Equipment Assembly

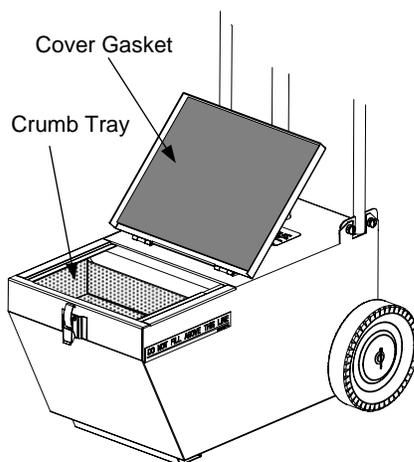

Assembly of the unit is a four-step process:

1. Remove the two bolts (or lock pins if manufactured prior to May 2006) from the handle-mounting bracket and raise the handle to the upright position. Reinstall the bolts (or lock pins) in the bracket.
2. Ensure the O-rings and the bottom 2 inches of the suction tube are lubricated with *Accrolube with Teflon* or an equivalent light oil or grease.
3. Turn the pump and suction tube upside down and carefully pour no more than one cup of cooking oil down the tube. Rotate the pump handle slowly three or four times to prime the pump.
4. Insert the suction tube through the pipe bracket on the handle and into the pickup tube on top of the reservoir. Push down on the pump assembly and ensure the suction tube is fully seated.

2.3 Equipment Operation

 **WARNING**
DO NOT use this unit to dispose of water or Boil-out solution. Introduction of water or solvents into the unit will permanently damage the pump.

1. Turn the fryer off prior to draining into MSDU. If so equipped, ensure the fryer drainpipe is firmly threaded into the frypot drain valve.
2. Open the cover, verify that the crumb screen and rubber gasket on the inside cover are in place, and position the unit so that the opening is directly under the frypot drainpipe.

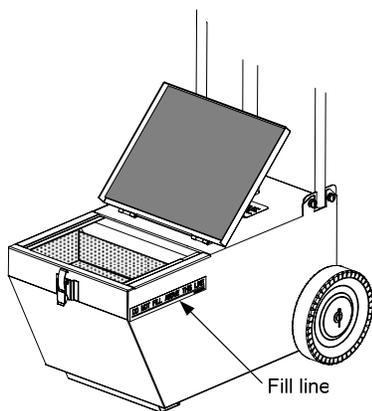

⚠ DANGER

Before each use inspect the cover to ensure the cover gasket is present and properly placed. **DO NOT** use the disposal unit if this gasket is damaged or missing.

3. *Slowly* open the drain valve. Regulate flow with the drain valve to prevent splashing.

⚠ DANGER

DO NOT OVERFILL! Do not fill the reservoir above the fill lines on the sides of the reservoir. Moving the MSDU with an overfilled reservoir may result in spills and injury to personnel who come in contact with the spilled oil.

4. Carefully withdraw the unit far enough to allow the cover to be closed. Latch the cover in the closed position. Using the handle, carefully tip the unit back slightly for ease of handling and roll the unit to the disposal site.

⚠ WARNING

DO NOT use the pump or discharge piping assembly as a handle!

⚠ DANGER

To minimize the potential for burns, oil must always be allowed to cool below 100°F (38°C) before draining into the MSDU and transporting to the disposal area. However, **DO NOT** allow oil to congeal in the MSDU.

The unit is designed to be moved, when properly filled, at an average walking pace on a flat surface. *Care must be taken at all times when moving hot oil. Rough terrain or sudden stops and starts may cause the contents of the reservoir to spill or splash out of the reservoir, possibly causing serious injury to personnel. Always ensure that the cover is latched shut when moving the unit.*

5. At the disposal site, lift the pump assembly lock pin and rotate the discharge pipe as necessary to position the discharge nipple over the opening of the disposal container. Release the lock pin to secure the pump assembly in position. Turn the pump handle clockwise. The pump should start discharging oil after a few turns. Continue turning the handle until the MSDU reservoir is empty. **NOTE:** The pump is *NOT* self-priming. If it has not been used for several days, it may have lost its prime and may need to be re-primed in accordance with Step 3 of Section 2.2.

2.4 Cleaning

Clean the crumb screen with a solution of detergent and water. Clean the *exterior surfaces* of the MSDU with a soft cloth and a solution of detergent and water. It is not necessary to clean the interior of the reservoir, but if desired it may be wiped down with clean paper towels to remove excess residual oil.

WARNING

DO NOT clean the interior of the reservoir with water or detergent. Introduction of water or detergent into the unit will permanently damage the pump.

3. SERVICE PROCEDURES

3.1 Introduction

Other than routine cleaning and the replacement of worn suction tube O-rings, the MSDU is maintenance free. After long use, the pump vanes and pump shaft seal may require replacement due to wear. Frymaster recommends worn pump vanes and/or pump shaft seals be replaced by an FASC, but store personnel may perform these service actions without voiding the warranty.

3.2 Replacing Worn or Damaged O-Rings

If pump efficiency degrades, it is likely that the O-rings on the suction tube are worn or damaged. To replace the O-rings, follow the steps below.

1. Lift the pump assembly straight up and out of the handle assembly.
2. Remove the worn or damaged O-rings from the grooves at the bottom of the suction tube and replace with new O-rings. Apply *Accrolube with Teflon* grease or equivalent to bottom 2 inches of the suction tube.
3. Insert the suction tube through the tube bracket in the handle and into the receiver on top of the reservoir. Push down on the pump assembly to make sure the suction tube is fully seated.

3.3 Replacing Worn Pump Vanes and/or Pump Shaft Seal

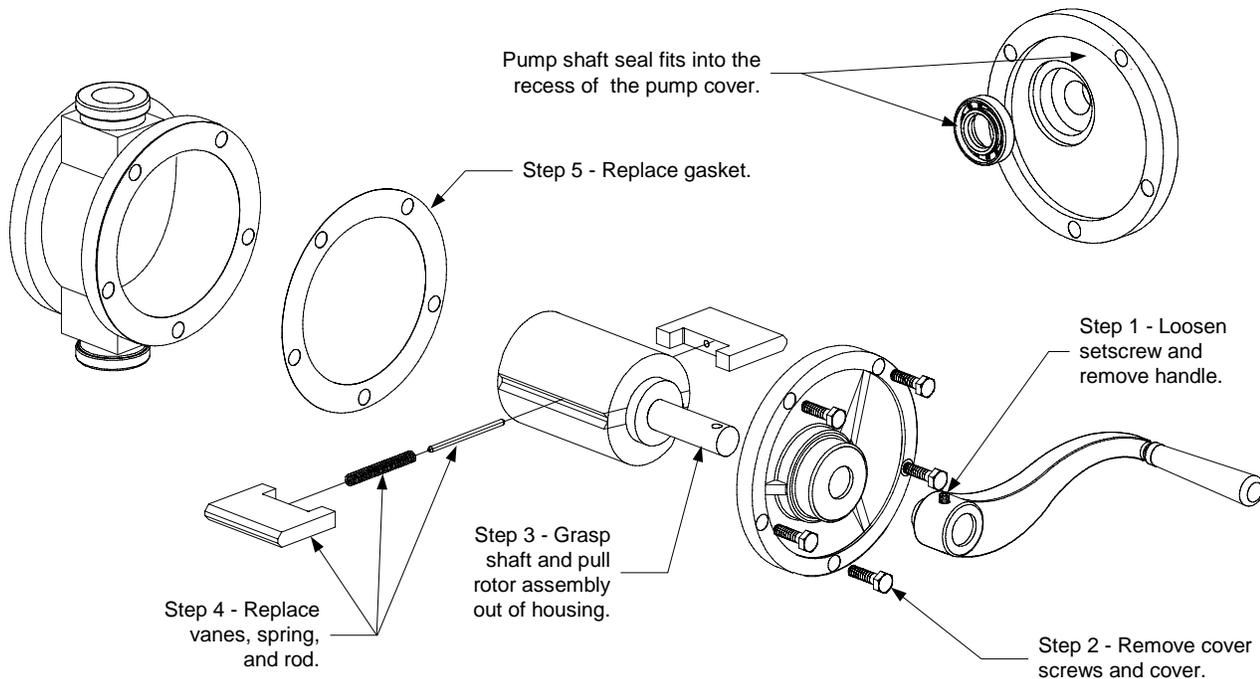

Depending upon the amount of use, the vanes in the pump assembly will eventually wear, reducing the efficiency of the pump. The pump shaft seal can also become worn and start to leak. A kit for replacing the vanes and the seal is available. The pump shaft seal can also be purchased as a separate item. To replace the pump vanes, and/or the pump shaft seal, follow the steps below (refer also to the illustration on Page 6).

1. Loosen the setscrew securing the pump handle to the pump shaft and slip the handle off the shaft.
2. Remove the five screws securing the front cover and remove the cover.

If replacing the pump shaft seal only, remove the old seal and install the replacement as shown in the illustration on Page 6, then go to Step 5.

If replacing the pump vanes, go to Step 3.

3. Grasp the pump shaft and carefully pull the rotor assembly straight out of the pump housing far enough to expose the vanes. **IMPORTANT:** The vanes are spring-loaded. Use one hand to hold the vanes while pulling the rotor assembly the rest of the way out of the housing. Carefully release the vanes and discard the worn vanes, springs, and rods.

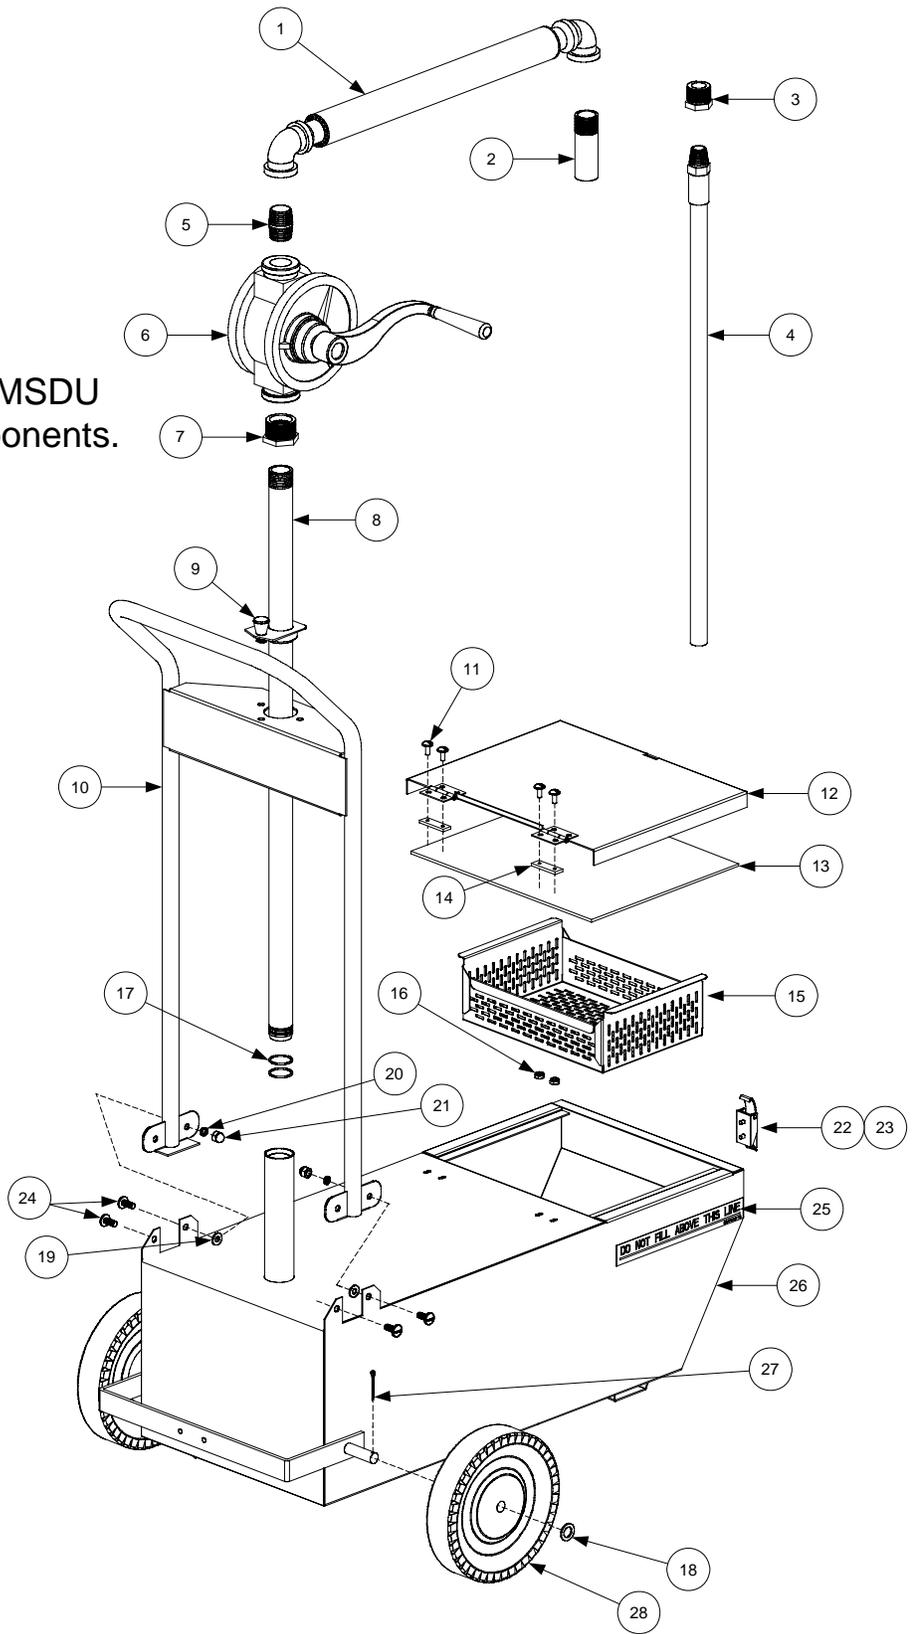

4. Assemble the replacement vanes, spring and rod into the rotor assembly. Compress the vane spring and carefully insert the rotor assembly back into the pump housing.
5. Position the replacement gasket on the pump body, slip the cover over the shaft, and align the pins in the cover with the holes in the pump housing. Reinstall the five screws removed in Step 2 and tighten securely (torque to approximately 60 inch-pounds).
6. Slip the pump handle back onto the shaft and align the screw hole in the handle with the screw hole in the shaft. Tighten the setscrew loosened in Step 1 securely.

THIS PAGE INTENTIONALLY LEFT BLANK.

4. PARTS LIST

Note: See page 6 for MSDU pump assembly components.

ITEM	PART #	COMPONENT
1		Pipe Assembly, Discharge
	823-4600	Standard <i>(includes Item 2)</i>
	823-4598	For use with Item 4 (Hose Discharge) <i>(includes Item 3)</i>
2	813-0115	Nipple, ¾-inch x 3-inch Toe
3	813-0031	Bushing, ¾-inch x ½-inch
4	810-1845	Hose, 24-inch Discharge (Optional) (use 810-2797 for 48-inch hose)
5	813-0109	Nipple, ¾-inch x Close
6	810-0784	Pump <i>(includes handle 810-0657, which may be ordered separately)</i>
*	826-1053	Kit, Pump Repair <i>(includes two vanes, one spring, one rod, one gasket.)</i>
*	816-0401	Seal, Pump Shaft
7	813-0032	Bushing, 1-inch X ¾-inch Hex
8	823-4581	Pipe Assembly, Suction
9	810-0777	Pin, Plunger
10	823-2038	Handle Assembly
11	809-0119	Screw, 10-32 x ½" Slotted Head
12	823-1683SP	Cover and Hinge Assembly (does not include gasket (item 13))
13	816-0134	Gasket, Cover <i>(attach with 3M 1300L adhesive or equivalent)</i>
14	816-0133	Gasket, Cover Hinge
15	824-0438	Screen, Crumb
16	826-1376	Nut, 10-32 Keps Hex (Pkg. of 10)
17	816-0132	O-ring, Suction Pipe Assembly (2 required)
18	809-0200	Washer, Wheel ½" SAE
19	809-0193	Washer, ¼-inch Nylon Flat
20	809-0191	Lock Washer, ¼-inch
21	809-0047	Nut, ¼-20 S/S Cap
22	810-0742	Latch, Tank Cover
23	809-0359	Screw, #8 x ¼-inch
24	809-1001	Screw, ¼-20 x ½" Slotted Head
25	802-0227	Label, Fill Line
26	823-4580SP	Tank and Axle Assembly
	826-2103	MSDU50 Retrofit Kit for MSDU's manufactured prior to Jan. 2004
27	810-0783	Cotter Pin, Wheel
28	810-1112	Wheel, 7-inch x 1½-inch
*	815-0661	Adhesive, 3M 1300L
*	815-0565	Grease, Accrolube w/ Teflon
* Not Illustrated
