Assembly & Operation

1. Attach the adjustable brackets to the platform with M10-1.25 bolts and 10mm flat washers.
2. Thread a M6-1 wing nut, wings up, followed by a 6mm flat washer to the chain tensioning hook.
3. Locate the tab with the center hole on the platform.
4. Slide the threads of the chain tensioning hook through the center hole and follow with 6mm flat washer and M6-1 wing nut.
5. When the platform has been raised to meet the workpiece, slide one end of the chain over the hook. Wrap the chain over the workpiece and fit the other end of the chain into the slotted tab on the opposite side of the platform.
6. Use the wing nuts on the chain tension hook to tension the chain. This will provide additional stability to the workpiece.
7. Turn the pump knob clockwise to close the valve.
8. Insert the handle into the pump socket and pump the handle to raise the platform.
9. Slowly turn the pump knob counterclockwise to lower the platform.

WARNING

This jack is designed for the assistance of transmission removal only. Failure to follow these warnings will result in serious personal injury or death:

1. DO NOT overload this jack beyond its rated capacity. Overloading can cause the jack to collapse and drop the load.
2. ALWAYS support the load with an appropriately rated support stand before working under the vehicle.
3. DO NOT attempt to move the vehicle while the jack is under it.
4. Use only on hard level surfaces like concrete or asphalt. Other surfaces are potentially unstable.
5. Center the load on the jack to maintain proper balance.
