

5.1 Home Theater Speaker System

CINEMA 10

Built to true Reference standards, the Cinema 10 home theater system delivers all the power, detail and emotion of your favorite music and movies. Compact, stylish and versatile, this life-style oriented setup fits almost anywhere and in any type of environment.

Made up of four RSX-5 satellites, an RCX-4 center channel and an RW-10 powered subwoofer, this system is perfect for larger rooms. Available in black or silver, the RSX-5 and RCX-4 are two-way, magnetically shielded speakers that use 1-inch titanium-dome compression drivers coupled to Klipsch's round MicroTracrix™ Horns for maximum clarity and efficiency. The RSX-5 employs a 5.25-inch woofer, while the RCX-4 has a pair of 4-inch drivers flanking its MicroTracrix™ Horn.

The woofers on the RSX-5 and RCX-4 are long-throw units powered by unique neodymium motor structures. The Cerametallic™ cones are lightweight with excellent rigidity, which dramatically reduces any resonance. As a result, these models are capable of robust bass extending low enough for comfortable operation with today's built-in A/V preamp/processor and receiver crossovers.

The satellites and center channel all have integrated pedestal stands with ball joints that allow them to be adjusted in almost any direction by simply using the provided allen wrench. Keyholes are provided on the underside of each stand base for no-hassle wall mounting. The speaker grilles magnetically snap into place over cast-aluminum front baffles, while sturdy five-way binding posts ensure secure connection to any type of cable.

Available in a black wood grain vinyl finish, the RW-10 employs a 10-inch Cerametallic™ cone woofer. This subwoofer gets its intensity from a newly designed amplifier that delivers 260-watts continuously (FTC rated), but more importantly, 575-watts of dynamic

power. The driving force behind the RW-10 is Klipsch's exclusive Corner Port™ Technology. This technology allows the port tube to be as long as possible without bending, which minimizes turbulence that can cause port noise and distortion. It also allows the enclosure to be tuned to a lower frequency than would otherwise be possible to create deeper bass from a smaller cabinet. Another important element is a corner-shaped flange at the port's internal opening, which amplifies the benefits of the longer port.

Please refer to RSX-5, RCX-4 & RW-10 cut sheets for individual specifications.

- Ball-joint pedestal stand with keyholes allows easy placement
- MicroTracrix Horn tweeter for clear sound in any location
- High-power, high-efficiency BASH digital hybrid amplifier
- Steep-slope 24dB/octave crossover filter with bypass option
- Side-mounted level control for easy adjustment
- Auto Power feature turns sub on and off automatically
