*Sonically Superior Since 1976*

**Subwoofer Owner's Manual:**

**Subsonic<sup>™</sup>, Baby Boomer<sup>™</sup>, Baby Boomer Plus<sup>™</sup>,**

**Digital Sub<sup>™</sup> 600 & Supersonic<sup>™</sup>**

**2003 PINNACLE LOUDSPEAKERS**

We congratulate and thank you for choosing a PINNACLE<sup>®</sup> subwoofer. Our subwoofers exemplify the best in modern audio technology, and are designed to produce tremendous amounts of deep bass. Please read this manual completely to ensure the best possible performance from your Home Theater or sound system.

### **SOLID BRASS ISOLATION CONES:**

Please make sure to install the solid brass isolation cones into the bottom of your subwoofer cabinet. They are an important part of the performance of the product and will improve the bass definition.

With the cabinet on its side, simply screw the cones into their receptacles on the bottom of the cabinet. Then, with the cabinet upright, adjust the cones individually as needed to level the cabinet. When the cones have been adjusted to the proper height, screw each nut up the threaded shaft flush with the bottom of the cabinet to secure the height setting. If you intend to place your subwoofer on wooden or vinyl floors, we suggest placing a penny under each cone to prevent any indentations.

### **PLACEMENT:**

Recommended Subwoofer Placement:

- a) within a few inches of the room corner closest to your left or right front speaker (maximum low bass output);
- b) against the wall between your left and right front speakers (strong low bass output with optimal blending to front speakers);
- c) near any other room corner or wall.

Other locations will provide varying degrees of low bass impact and blending with your front speakers. We recommend listening to your system, with the subwoofer in different room positions, to obtain a location with an optimum response.

A Special Note to Subsonic<sup>™</sup>, Baby Boomer<sup>™</sup> & Baby Boomer Plus<sup>™</sup> owners: Due to the bipole configuration of your subwoofer be sure to leave at least an inch or two between the rear woofer and your wall.

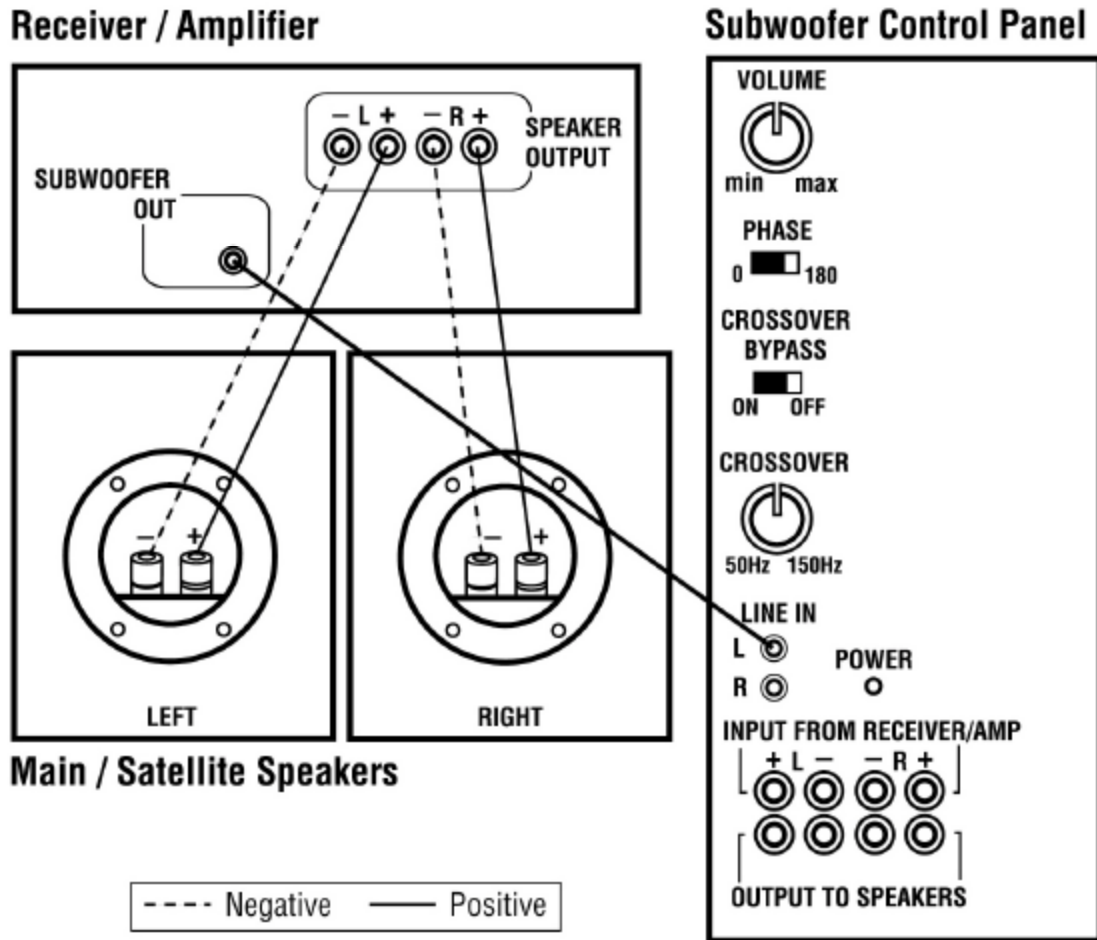

If you must place your subwoofer near baseboard heaters or forced hot air vents try to leave at least 4" of clearance for proper ventilation. Do not place your subwoofer outdoors, or in any wet or excessively damp environment.

Note: Because of your subwoofer's powerful magnet, be sure to place your subwoofer far enough away from your TV (approximately 2-3 feet) to avoid color distortion and any other anomalies in the picture. If you experience picture distortion, simply move the subwoofer away from the TV until the picture becomes distortion free. We also recommend keeping magnetic media such as audio/videotapes and computer disks at least 2-3 feet away from your subwoofer to prevent damaging them.

## CONNECTIONS:

Complete all wire connections in your Home Theater/Sound system before powering up your subwoofer or your receiver (amplifier). Be sure to observe proper polarity for all speaker wire connections (+ to +, - to -). Use only speaker wire of 12, 14, or 16 gauge (available from your dealer) to obtain the best performance. Lightweight speaker wire (20, 22 gauge, etc.) will result in degraded performance; 18 gauge wire may be used for short runs of about 15 feet or less.

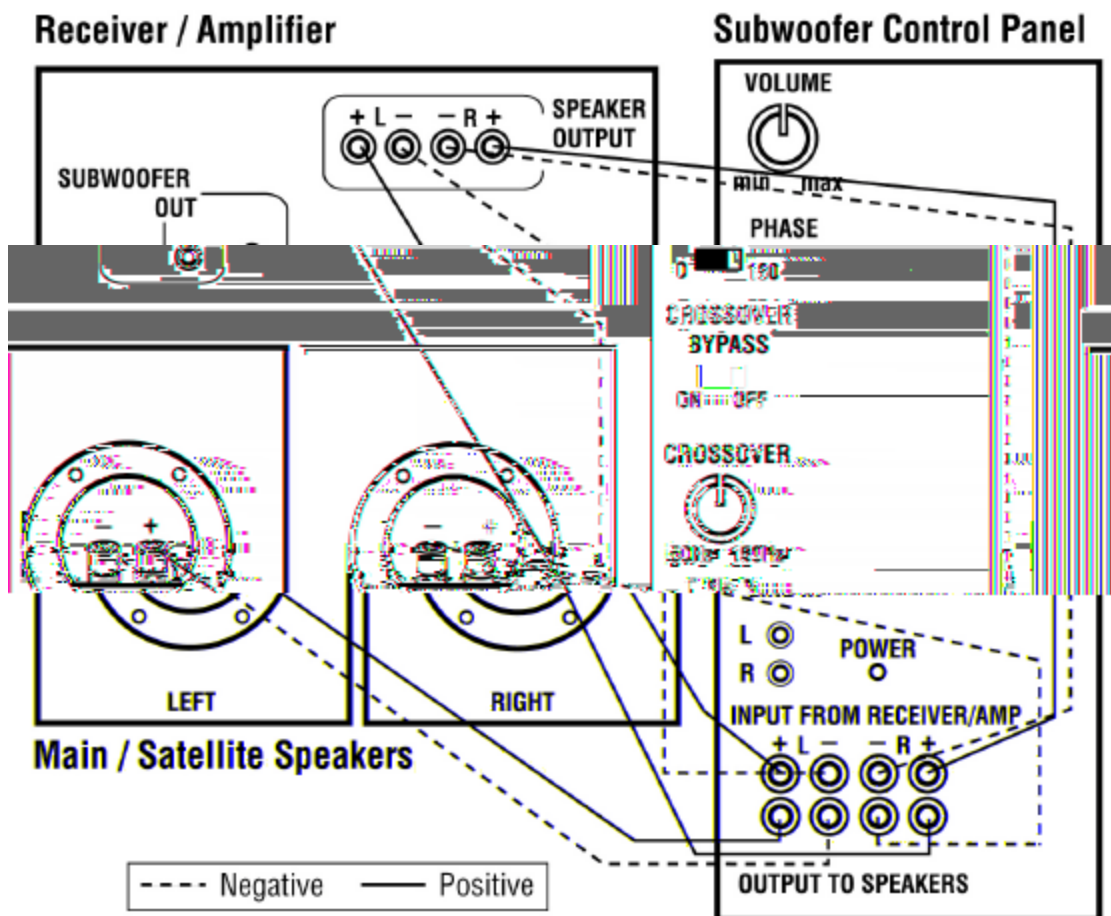

### OPTION #1 - Using The Line Input:

To use the subwoofer's LINE INPUT your receiver must have a dedicated phono (RCA) subwoofer output jack (sometimes called Sub Out, Low Pass or LFE). If your receiver has this output jack you may connect your subwoofer via a standard phono cable (the same kind of audio cable used to connect your CD, tape deck, etc.). This method is generally the easiest to hook-up. Note: Do not connect the subwoofer to the tape loop outputs from your receiver as they will overdrive the subwoofer's circuitry!

- Simply connect your subwoofer, using either the L or R Line Input jack, to the subwoofer output jack on your receiver.
- If you have a Dolby Digital (AC-3) or DTS receiver or processor place the subwoofer's Crossover Bypass switch in the ON position (this bypasses the Low Pass Filter in the subwoofer).
- If you do not have a Dolby Digital (AC-3) or DTS receiver or processor place the subwoofer's Crossover Bypass switch in the OFF position (this activates the Low Pass Filter in the subwoofer).
- If your receiver or processor has no subwoofer output jack you can connect your subwoofer, using its L & R input jacks, to your receiver or processor's pre-amp left & right channel outputs. If your receiver or processor uses jumpers to connect its pre-amp outputs with its inputs you will need to acquire two splitter cables (Radio Shack #42-2435) to be able to hookup your sub while continuing to provide a signal to your receiver or processor's inputs.
- Lastly, wire your left and right front speakers directly to your receiver's speaker outputs. Please refer to the Option #1 wiring diagram for further clarification.

**OPTION #2 - Using The Binding Post Inputs:**

There are two reasons to use this connection option. The first is if your receiver has no RCA subwoofer output jack! The second is if your system would benefit from having the bass filtered out of the main speakers. (If you have a Dolby Digital or DTS receiver you can achieve the same results electronically simply by configuring your main speakers as SMALL and connecting your sub via a Phono cable - See Option #1). If you have large main speakers that are capable of reproducing a great deal of bass on their own then this connection option may not be advantageous to you. If however you have small main speakers then this method deserves consideration. Since this connection method filters D thod own thThw

- Adjust the PHASE switch on the subwoofer's control panel to determine which position sounds the most natural. The difference should be most audible in the mid-bass. If you cannot detect a difference, leave the PHASE switch in the 0° (in-phase) position.
- If you have placed your subwoofer's Crossover Bypass switch in the OFF position adjust the FREQUENCY ADJUST knob and determine what position sounds best. This feature controls the output level of the mid and upper bass frequencies. Please note that if you have put your subwoofer's Crossover Bypass switch in the ON position, due to the low pass filter already in your receiver, the subwoofer's frequency adjust control is unnecessary, will have no effect, and its position can therefore be ignored.
- The best VOLUME level, PHASE switch and FREQUENCY ADJUST positions will mostly be determined by your room acoustics and the mid and upper bass frequency response characteristics of your front speakers. The source material will also play a significant role as its bass level may vary considerably.
- After your initial adjustments you may want to go back and "tweak" these controls. Their effects are acoustically interrelated. Re-adjusting them may be necessary to obtain optimal performance. Generally, once you are satisfied with your subwoofer's settings, you can use your receiver's tone, equalizer, volume and subwoofer output level controls to optimize your whole system's performance.

#### **VERY IMPORTANT!**

- **If you have a Dolby Pro-Logic Home Theater system, make sure that your receiver's center channel mode is in the NORMAL position. This will ensure that all low bass information is sent to your subwoofer.**
- **If you have a Dolby Digital (AC-3) or DTS Home Theater system, make sure that you have correctly configured your receiver's Bass Management System so that all of your speakers are properly categorized as either SMALL or LARGE. This will ensure that all appropriate low bass information is sent to your subwoofer. As a general rule, a speaker with an 8" or greater diameter woofer may be considered LARGE. Conversely, a speaker with a woofer less than 8" in diameter may be considered SMALL. Please note that the bass output of a dual woofer speaker could be comparable to that of a larger single woofer speaker. Example: A dual 6.5" woofer system would generally be considered LARGE since its woofer area approximates that of a single 10" woofer system.**

- **With high volume levels of certain types of signals, the subwoofer may be audibly strained. If you hear the subwoofer “breaking-up” or distorting, turn the volume level down.**
- If you have any problems or questions please contact your PINNACLE® dealer for further assistance.

### **TROUBLESHOOTING:**

No Sound only from Subwoofer - Check subwoofer power/volume settings and all connections. Ensure that the center channel mode on the receiver is in the NORMAL or SMALL position. If you have connected the subwoofer via RCA cable and if your receiver has a subwoofer on/off or variable subwoofer output level control, ensure that the subwoofer option is turned on and that the output level is at maximum. Make sure the RCA cable is connected to the receiver's subwoofer output and not the subwoofer input jack that some receivers have. If the problem persists, refer to the TO OBTAIN SERVICE section of your warranty at the end of this manual.

No Sound only from Left and Right Front Speakers - Check all connections. Ensure that your receiver's speaker channel A or B is switched on. Note: You must connect your speakers to your receiver's speaker outputs if you connected the subwoofer via the LINE INPUT.

Too Much Bass - Check: subwoofer volume/phase/frequency controls; receiver bass/loudness controls; program material; move subwoofer further out of corner or away from wall.

Too Little Bass - Check: subwoofer volume/frequency/phase control positions; all speaker wire phase (+ to +, - to -); receiver tone controls; program material; ensure that the center channel mode on the receiver is in the NORMAL or SMALL position. If your receiver has a variable subwoofer output level control, ensure that the output level is at maximum. Try moving the subwoofer further into a corner or towards the wall. If you have connected the subwoofer via a single phono cable you may want to try using a cable splitter (Radio Shack part #42-2435). This will allow you to use both line inputs which will increase the input signal strength to the subwoofer.

Hum: Check for faulty phono connecting cable. Try to separate phono cables from power cords (they can induce hum into the system). If that doesn't work we recommend you turn off your subwoofer when it is not in use. This is most easily accomplished by either connecting its powercord to a switched power outlet on the back of your receiver (if it has them) or by using a Remote Controlled Switched Outlet like Radio Shack part #61-2667.

**Subsonic™, Baby Boomer™, Baby Boomer Plus™, Digital Sub™ 600 & Supersonic™ Specifications:**

Woofer(s) :

Subsonic™ : (2) 6.5" heavyweight fibercone woofers 2" voice coils and 30-ounce magnets

Baby Boomer™ & Baby Boomer Plus™ : (2) 8" heavyweight fibercone woofers with rubber surrounds,  
2" voice coils and 40-ounce magnets

Digital Sub™ 600 & Supersonic™ : (2) 12" heavyweight polycone woofer with rubber surrounds,  
2" voice coils and 40-ounce magnets

Subwoofer Low End Frequency Response:     Subsonic™ : -3 dB @ 28 Hz  
  Baby Boomer™ & Baby Boomer Plus™ : - 3 dB @ 27 Hz  
  Digital Sub™ 600 & Supersonic™ : - 3 dB @ 23 Hz

Variable Subwoofer Low Pass Filter: Fourth Order from 50 - 150 Hz

System: Subsonic™ & Baby Boomer™ & Baby Boomer Plus™ - Acoustic Suspension / Bipole Configuration  
          Digital Sub™ 600 & Supersonic™ - Compound Compression

Dimensions: Subsonic™ : 7 7/8" wide x 7 7/8" high x 7 7/8" deep (without grills)  
              Baby Boomer™ & Baby Boomer Plus™ : 9 7/8" wide x 9 7/8" high x 9 7/8" deep (without grills)  
              Digital Sub™ 600 & Supersonic™ : 14 1/4" wide x 15" high x 15" deep (with grill)

Weight: Subsonic™ - 22 lbs. / Baby Boomer™ & Baby Boomer Plus™ - 30 lbs.  
          Digital Sub™ 600 & Supersonic™ - 50 lbs.

Amplifier Power: Subsonic™ - 350 Watts  
                      Baby Boomer™ & Digital Sub™ 600 - 600 Watts  
                      Baby Boomer Plus™ & Supersonic™ - 800 Watts

Power Requirements: AC 120 V, 60 Hz, 800 Watts Maximum

## **LIMITED WARRANTY:**

### **What Is Covered**

Your Pinnacle<sup>®</sup> subwoofer features a limited warranty as follows. The subwoofer driver(s) and all assembly and construction aspects are covered by this warranty for a period of seven (7) years from the date of original purchase. Your subwoofer amplifier is covered by this warranty for a period of two (2) years from the date of original purchase. The warranty covers all necessary parts and labor to return the subwoofer to proper working order. Cabinet surfaces, grill assembly, and other exterior parts subject to normal wear and tear are not covered except where an inherent structural defect becomes evident.

Parts replacement and labor will be performed at the discretion of Pinnacle Loudspeakers and will be provided free of charge unless (in the opinion of our service department, service representatives, or engineering department) the system has failed due to abuse or negligent operation.

### **What Is Not Covered**

This warranty will be void and no free services performed if we or any party acting as our agent determines that the system has had any of its elements (amplifier, woofer, etc.) removed or tampered with in any way whatsoever. Furthermore, if your subwoofer is not found to be defective a service charge will be levied. In either case the minimum charge will be \$30.00. An additional charge will be applicable for same day service where possible and this charge will always be in effect even if the actual parts and labor are covered by this warranty. Pinnacle Loudspeakers reserves the right to make the final determination of whether or not the system has been damaged by abuse or negligent operation.

### **To Obtain Service**

To obtain service under this warranty, either contact your Pinnacle<sup>®</sup> dealer or us directly at (516) 576-9052 or [service@pinnaclespeakers.com](mailto:service@pinnaclespeakers.com). You may also write us at 170 Express St., Plainview, NY 11803. If you ship your subwoofer you are responsible for packing and shipping insurance. The freight must be prepaid. We will, however, pay return freight charges on any returned subwoofer that qualifies for in-warranty service. Sorry, we cannot accept any collect freight charges. You must include a note, attached to the unit, with your name, phone number or email address, and return shipping address (no Post Office boxes), indicating the nature of the problem you are experiencing. For warranty service you must also include a copy of your sales receipt. **YOU MUST FIRST CONTACT US FOR THE CUSTOMER SERVICE SHIPPING ADDRESS IN YOUR AREA IF YOUR DEALER IS NOT EQUIPPED FOR THIS SERVICE.** Please be sure to pack any items you ship us carefully since we cannot be held responsible for damages incurred during shipping.

This warranty may be transferred to a subsequent owner.

**SAVE YOUR ORIGINAL SHIPPING CARTON AND PACKING MATERIALS, AS WELL AS THIS WARRANTY AND YOUR SALES RECEIPT. YOU WILL NEED THEM TO OBTAIN SERVICE UNDER THE PROVISIONS OF THIS LIMITED WARRANTY.**
