Product highlights

Learning capability

To have all the functions of your original remote available you can copy the signal transmitted from the original remote. It is then stored in the memory of the Universal remote control.

Big button

Big buttons are larger size buttons on a remote to help read the label better. Additionally, pressing the button becomes more convenient, as the size has increased by 2 mm compared to the standard button remote size.

Full DVD, DVR, and SAT

Match the correct buttons with your lost or replacement remote with advanced DVD keys such as angle, zoom, subtitle, open/close, repeat, and title. For SAT you need guide, info, select, OK, scroll keys, quit, and menu. For DVR, play, fast forward, stop, record, T Central, thumbs up/down, chapter scan, and repeat.

Light up every button

Can't see in the dark. Try pressing small buttons on a remote when you can't see the keys. Change that with back lighting that light up the keys so you can see the keys as if it were the middle of the day. Small LCD lights are attached to the circuit board, that light up the keys, when you press the light button

Learn from your old remote

After you buy your universal remote, it seems you are missing a few of the buttons you liked to use on your old original remote, which prevents you from consolidating. When you want to use your favorite button, you have to go back to the original remote. On learning remotes, you can take the code for your favorite button on your original remote, and learn it/move it to the universal in 3 easy steps.
