

Powerware 9910 pSeries UPS Solutions

Features

- ▶ Exclusive multi-year warranty offered through IBM
- ▶ Compact, rackmount design of the P18, P30, P33, and P64 preserves valuable rack space
- ▶ Preconfigured design guarantees out-of-box usability with IBM equipment
- ▶ Extended Battery Modules (EBMs) prolong battery runtimes
- ▶ Black design matches pSeries and other IBM servers
- ▶ Bundled communication cable provides pSeries system interface
- ▶ ABM® technology extends battery service life
- ▶ Bundled power management software ensures data integrity

Ideal applications for:

- ▶ Banking
- ▶ Retail
- ▶ Telecommunications
- ▶ Healthcare
- ▶ Life Sciences
- ▶ Financial Markets

Specifically engineered for IBM pSeries and IntelliStation equipment, Powerware's 9910 UPS Solutions use state-of-the-art technologies to deliver the highest level of power protection available.

Today's mission-critical equipment requires the most advanced level of power protection to assure high availability and system uptime. If your business depends on a pSeries system, it needs to be protected by a Powerware 9910 (Configurator) pSeries UPS. Specifically designed, engineered and approved for IBM pSeries and IntelliStation equipment, these single-phase UPS solutions incorporate the latest technologies and state-of-the-art features.

Designed to help preserve your investment by extending the performance of your equipment,

Powerware's 9910 UPS solutions advance IBM servers to heightened levels of availability. These UPSs incorporate Advanced Battery Management (ABM®) technology to increase the overall life of your UPS batteries, offer Extended Battery Modules (EBMs) for prolonged runtimes, include equipment jumper cords for ease of installation, and are bundled with award-winning power management software, to enable you to monitor an efficient shutdown of critical equipment and preserve data integrity during extended power failures.

9910 pSeries UPS Models

IBM Server *Proven*™

POWERWARE®

Powerware 9910 pSeries UPS Overview

Superior battery technology, enhanced voltage regulation and network transient protector are key benefits of the P07. (The P07 is beige in color.)

Occupying just 2U (3.5 inches) when used in a rackmount configuration, the P10, P15, and P30 offer premium protection with its online design.

With its compact 2U design, the P18 and P33 preserve valuable rack space. Even more, its high power density design enables more equipment to be protected.

Featuring load segments which enable scheduled shutdowns and load shedding and advanced communications with the bundled software, the P22 provides advanced power management for pSeries servers. (The P22 is beige in color.)

Extended battery runtime capabilities, superior battery technology and enhanced reliability, while still occupying only 5U of valuable rack space, are key benefits of the P64. (P64 shown with EBM.)

Powerware 5115, 750 VA (P07)

- ▶ Advanced Battery Management (ABM®) technology doubles battery service life and optimizes recharge time
- ▶ Buck and boost voltage regulation with pure sine wave output corrects incoming fluctuations and delivers smooth, continuous power
- ▶ Network transient protector isolates equipment connected to a network from "backdoor" power surges
- ▶ Hot-swappable batteries simplify service

Powerware 9125, 1000 VA (P10), 1500 VA (P15), and 3000 VA (P30)

- ▶ Online topology delivers the highest level of reliability and protection by completely isolating equipment from all power disturbances
- ▶ Advanced Battery Management (ABM®) technology doubles battery service life and optimizes recharge time
- ▶ Extended Battery Modules (EBMs) prolong battery runtimes. Add up to 2 EBMs to the 1000 VA model (P10) and up to 4 EBMs to the 1500 VA model (P15) and 3000 VA (P30) models. Each EBM occupies just 2U of rack space
- ▶ Load segments allow scheduled shutdowns and maximize battery backup times

Powerware 5125 Rackmount, 1500 VA (P18) and 3000 VA (P33)

- ▶ Highest density UPS available in the market in a compact 2U rack height. The 1500 VA model (P18) delivers 1340 watts of power; the 3000 VA model (P33) delivers 2700 watts of power
- ▶ Advanced Battery Management (ABM®) technology doubles battery service life and optimizes recharge time
- ▶ Extended Battery Modules (EBMs) and load segments prolong battery runtimes. Add up to 4 EBMs, each occupies only 2U of rack space
- ▶ P33 MultiServer Card adapts to growing configuration needs by providing up to three server connections

Powerware 5125, 2200 VA (P22)

- ▶ Advanced Battery Management (ABM®) technology doubles battery service life and optimizes recharge time
- ▶ Buck and double boost voltage regulation with pure sine wave output corrects incoming fluctuations and delivers smooth, continuous power
- ▶ Hot-swappable batteries simplify service
- ▶ Load segments allow scheduled shutdowns and maximize battery backup times

Powerware 9125, 6000 VA (P64)

- ▶ Double-conversion, online technology delivers the highest level of reliability and protection, completely isolating equipment from all power disturbances
- ▶ Advanced Battery Management (ABM®) technology doubles battery service life and optimizes recharge time
- ▶ Extended Battery Modules (EBMs) prolong battery runtimes. Add up to 4 EBMs to the 6000 VA model (P64). Each EBM occupies just 3U of rack space
- ▶ Choice of rackmount or tower installation delivers deployment flexibility

Intelligent Communications

The intelligent communications capability of the Powerware 9910 UPS means improved reliability, easier network power management and expanded network communications. With both hardware and software communications options, Powerware provides the right communications solutions for your specific application.

Powerware Extensions for IBM Director

Powerware Extensions for IBM Director provide seamless integration of Powerware UPSs into the Director management system. The Extensions for IBM Director simplify network management tasks for critical elements of server power protection. System administrators can easily monitor, diagnose, configure, set alarms, schedule self-tests, check battery, gather inventory information, and control Powerware UPSs network wide from a single console within IBM Director.

LanSafe

LanSafe version 5 delivers comprehensive support including graceful, remote shutdown of UPS systems and network monitoring tools via serial US, and network connectivity options. LanSafe's exclusive SafetyNet Technology provides Network Shutdown functionality and enables network administrators to shut down the most critical equipment last.

NetWatch

NetWatch is a shutdown client for ConnectUPS Web/SNMP adapters. NetWatch features powerful and flexible local configuration possibilities, including custom messages to the user, possibility to run user-defined commands prior to shutdown for example to close special applications. Shutdown control settings, email and SNMP notifications and other system wide function reside on the Web card, thus simplifying the the use of NetWatch and limiting the configuration option to those that affect the particular computer only.

ConnectUPS Adapters

Powerware's ConnectUPS-X and communications adapters provide a self-contained link between the UPS and the Ethernet LAN/WAN. Using HTTP, Telnet or SNMP, you can easily monitor, manage, and shut down or reboot remote UPS-protected servers, routers, hubs and other key network devices in a controlled manner. These adapters are also compatible with manu third-party network management software packages.

Software Application

Application	LanSafe	NetWatch	Powerware Extensions for IBM Director
Single pSeries (serial/TTY) non-LPAR	◆		
Single pSeries (network) non-LPAR	◆*	◆*	
Single pSeries (LPAR)		◆*	
Multiple pSeries (non-LPAR)	◆	◆*	
Multiple pSeries (LPAR)		◆*	
IBM Director Network Device			◆*

*Co-requisite FC 2934 or 2935 ConnectUPS Web/SNMP network card.

Note: UPS for iSeries applications utilize OS/400 UPS monitoring functions.

Software Comparison

Application	Monitoring	Shutdown	GUI	Email/SMTP	SSL/SSH ¹ Security	Ambient Temperature Humidity
LanSafe	Yes	Yes	Yes	Yes/Yes	No/No	No/No
NetWatch	-	Yes	-	No/No	No/No	No/No
ConnectUPS Web/ SNMP Card	Yes ²	Yes ³	Yes	Yes/Yes	Yes/Yes	Yes/Yes ⁴

1. SSL = Secure Sockets Layer. SSH = Secure Shell. 2. Via Web Browser, LanSafe or Network Management System (e.g. IBM Director, Tivoli). 3. In conjunction with NetWatch software. 4. With optional FC 2938 EMP (Environmental Monitoring Probe) device attached.

1. Can support a maximum of 2 rack devices. 2. Power cords are contained in Power Cord Kit box, IBM FC 9830, IBM PN 38P9306. 3. Can support a maximum of 1 Rack PDB. 4. User-selectable for 200, 208, 220, 230, 240 Vac. 5. Output will be the same as the selected input. 6. IEC-320-C19 receptacles can power Rack PDBs when using IBM PN 53P1968, IEC-320-C20 to IEC-309 CEE17, 2-pole, 3-wire, 32A receptacle power cord, 1.8 meters long. 7. Consists of two Power Cord Kits (IBM FC 9830, IBM PN 38P9306).
