Information Technology (IT) at the component level! An infrared (IR) Combustible Gas sensor module with the brilliance to provide Sentry, 4-20 mA or Modbus output. A stand alone module with the intelligence to provide integral alarms. A base model already loaded with features you need. A gas detector with a **Sierra Monitor** pedigree, **Factory Mutual** approved and ready to **Manage Your Gas Risk**. The 5100-28-IT provides all the built-in features desired by instrumentation and safety professionals, including:

- FM Approval for performance and safety
- SIL Certified - SIL-1
- Aluminum or 316 Stainless Steel enclosure
- Integral alarm relays – High, Low, Trouble
- Integral scrolling LED display
- 4-20 mA output
- Modbus RTU RS-485 interface
- SMC Sentry digital bus interface
- Option for non-Methane gas configuration
- Annual calibration frequency
- Interface to multiple protocols
- Remote alarm reset
- Optional remote sensor
- Optional integral 8 amp relays

The 5100-28-IT can be used as a 4-20 mA component or as a Modbus RTU node. For higher level system capability the module can interface directly to Sierra Monitor's Sentry Controller. As part of a Sentry system the user gains capability of system Modbus serial communications, extensive diagnostic features, area and zone alarm management, LanServer interface and multiplexing sensor connections.

Factory Mutual (FM) Approval for performance, electrical safety and environmental parameters including Class I, Div. 1, Groups B, C, D and Class I, Zone 1, Group IIB+H2 IP66. The 5100-28-IT is also SIL Certified and meets NFPA-72 requirements for gas detectors.

How It Works

Most combustible gases absorb infrared light energy at defined wavelengths, providing an absorption signature for that gas. The principle of an infrared detector is based upon the absorption of the infrared light at a specific wavelength as it passes through the gas. The more of the absorbing gas that is present, the more light is absorbed. The detector measures the energy from an infrared light beam at a wavelength that is absorbed by the gas and compares it to the energy emitted by the source. The difference in energy received by the detector indicates the level of gas in the atmosphere.

Remote Sensor Option

It is often necessary to sample the combustible gas at some distance from the gas sensor module. The IT Series enables the user to mount the sensor remotely from the transmitter without the need for expensive and high-maintenance sample pumps. The Remote Sensor Option (5394-50) provides a separate gas sensor that can be mounted up to 100 feet from the transmitter and connected via a cable.

Maximum distance from sensor to transmitter: 100 feet
