

Mity-Meg Megaphones

New features make these megaphones the best “boom” for the buck!

MITY-MEG PLUS - Model S602M: with detachable coil corded mic; 25 watts; effective range of up to 1760 yards; shoulder strap; 2 3/4 lbs.; requires 8 C-cell batteries, lasts 40 hours continuously, adjustable volume

MITY-MEG 25 - Model S602: 25 watts; effective range of up to 1760 yards; 2 lbs.; requires 8 C-cell batteries, lasts 40 hours continuously, adjustable volume

MITY-MEG 15 - Model S601: 15 watts; effective range up to 900 yards; 1.5 lbs.; requires 8 AA batteries, lasts 18 hours continuously, adjustable volume

OUR CUSTOMERS SAY: We are in the Insurance industry. We needed 8 of them for disaster recovery preparedness and after much research what I basically found was that there were many cheap models of megaphones that seemed cheap both in construction and output wattage. Your model seemed to fit the bill of being much more “commercial industrial” which in the end is what made the decision. We are definitely of the mindset that we are willing to pay more money for a superior product. We have been nothing but pleased with the results!
 -Ben Sowle, R.W. Troxell & Co.

All three models have NEW battery indicator lights on the outer housing, an easy to use battery cartridge and a volume/gain knob inside the cover for more control over the sound. Plus the same Piezo dynamic technology as their predecessors, making these lighter and louder than other megaphones.

Our lightweight, battery operated megaphones can be an essential addition to your emergency kit. All models have a comfortable pistol grip, 3-modes: talk, whistle and a built-in penetrating siren for emergency use and are powered by alkaline batteries (not supplied).

The Mity-Megs are great for use in high noise areas and large open spaces. Use it to direct emergency crews and alert crowds. Use at road races and other outdoor sporting events, or rallies. These megaphones are specially designed and built out of tough ABS plastic which makes them perfect for fire and police departments, state and federal agencies, marine environments, and event organizers.

All three models have the new Piezo Dynamic Technology, making these lighter and louder than other megaphones. *What is Piezo Dynamic Technology?* Piezo Dynamic technology is a revolutionary technique that allows a megaphone to operate more efficiently and with less weight than ever before.
