

MODEL H8233 3-PIECE FRAMING/BRAD NAILER & STAPLER KIT

OWNER'S MANUAL

COPYRIGHT © SEPTEMBER, 2007 BY GRIZZLY INDUSTRIAL, INC., REVISED FEBRUARY, 2008 (TS) WARNING: NO PORTION OF THIS MANUAL MAY BE REPRODUCED IN ANY SHAPE OR FORM WITHOUT THE WRITTEN APPROVAL OF GRIZZLY INDUSTRIAL, INC.

#TS9928 PRINTED IN CHINA

This manual provides critical safety instructions on the proper setup, operation, maintenance and service of this machine/equipment.

Failure to read, understand and follow the instructions given in this manual may result in serious personal injury, including amputation, electrocution or death.

The owner of this machine/equipment is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, blade/cutter integrity, and the usage of personal protective equipment.

The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.

Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically-treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

SAFETY

AWARNING

For Your Own Safety Read Instruction Manual Before Operating This Equipment

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words which are intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures.

Indicates an imminently hazardous situation which, if not avoided, WILL result in death or serious injury.

▲WARNING **▲** CAUTION

Indicates a potentially hazardous situation which, if not avoided, <u>COULD</u> result in death or serious injury.

Indicates a potentially hazardous situation which, if not avoided, <u>MAY</u> result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTICE

This symbol is used to alert the user to useful information about proper operation of the equipment.

AWARNINGSafety Instructions for Pneumatic Tools

- KEEP ALL SAFETY DEVICES IN PLACE and in working order.
- REMOVE ADJUSTING KEYS AND WRENCHES. Form habit of checking to see that keys and adjusting wrenches are removed from tool before operation.
- KEEP WORK AREA CLEAN. Cluttered areas and benches invite accidents.
- DO NOT USE IN DANGEROUS ENVIRONMENT. Do not use pneumatic tools in damp or wet locations, or where any flammable or noxious fumes may exist. Keep work area well lighted.

- KEEP CHILDREN AND VISITORS AWAY. All children and visitors should be kept at a safe distance from work area.
- MAKE WORKSHOP CHILD PROOF by locking your shop and shutting off air valves.
- DO NOT FORCE TOOL. It will do the job better and safer at the rate for which it was designed.
- **8. USE THE RIGHT TOOL.** Do not force tool or attachment to do a job for which it was not designed.
- DO NOT USE UNDER THE INFLUENCE OF DRUGS OR ALCOHOL.

AWARNING

Safety Instructions for Pneumatic Tools

- 10. USE PROPER AIR HOSE for the tool. Make sure your air hose is in good condition and is long enough to reach your work without stretching.
- 11. WEAR PROPER APPAREL. Do not wear loose clothing, gloves, neckties, rings, bracelets, or other jewelry which may get caught in moving parts. Non-slip footwear is recommended. Wear a protective hair covering to contain long hair.
- 12. ALWAYS USE SAFETY GLASSES. Also use a face or dust mask if cutting operation is dusty. Everyday eyeglasses only have impact resistant lenses, they are NOT safety glasses.
- 13. WEAR APPROVED HEARING PROTECTION. Air escaping from pneumatic tools can exceed safe exposure limits and may cause hearing damage with prolonged exposure.
- 14. SECURE WORK. Use clamps or a vise to hold work when practical. It is safer than using your hand and frees both hands to operate tool.
- 15. MAINTAIN TOOLS WITH CARE. Keep tools lubricated and clean for best and safest performance. Follow instructions for lubricating and changing accessories.
- 16. REDUCE THE RISK OF UNINTENTIONAL FIRING. Do not carry tool with hand on trigger and always disconnect from air when not in use.

- DISCONNECT TOOLS before servicing, changing accessories, or moving to another location.
- **18. DO NOT OVERREACH.** Keep proper footing/balance at all times.
- 19. USE THE RECOMMENDED ACCESSORIES. Consult owner's manual for recommended accessories. The use of improper accessories may cause risk of injury.
- 20. CHECK FOR DAMAGED PARTS
 BEFORE USING. Check for binding
 and alignment of parts, broken
 parts, part mounting, loose bolts,
 and any other conditions that may
 affect machine operation. Repair or
 replace damaged parts.
- 21. NEVER LEAVE UNATTENDED TOOL CONNECTED TO AIR. Disconnect the air hose and do not leave tool until it is relieved of any built up pressure.
- 22. NEVER ALLOW UNTRAINED USERS TO USE THIS TOOL WHILE UNSUPERVISED.
- 23. IF YOU ARE UNSURE OF THE INTENDED OPERATION, STOP USING TOOL. Seek formal training or research books or magazines that specialize in pneumatic tools.
- 24. BE AWARE OF HOSE LOCATION WHEN USING PNEUMATIC TOOLS. Hoses can easily become a tripping hazard when laid across the floor or spread out in a disorganized fashion.

AWARNING

Additional Safety Instructions for Nailers/ Staplers

- HAND INJURIES: Do not place your hands near the nail/staple point of entry. A nail/staple can deflect and tear through the surface of the workpiece, puncturing your hand or fingers.
- COMBUSTIBLE GASES: Never connect the nailer/stapler to pressurized oxygen or other combustible gases as an air source. Only use filtered, lubricated, and regulated compressed air.
- 3. SAFE HANDLING: Never point the nailer/stapler at others! Do not keep the trigger pulled when loading fasteners, carrying, or holding tool. Carry the tool only by the handle, never by any other part. Do not carry the tool by the air hose. Disconnect the nailer/stapler from the air hose when going up and down ladders.
- MODIFICATIONS: DO NOT modify this tool or bypass the safety nose mechanism.
- COMPRESSED AIR RATING: Do not connect the nailer/stapler to compressed air that exceeds 120 PSI.

- 6. HOSE USAGE: Make sure your air hose is designed for the tool in use, is in good condition, and is long enough to reach your work without stretching. However, an overly long air hose in the work area may be a tripping hazard.
- OPERATING QUESTIONS: If you are not sure about the intended operation, stop using the nailer/stapler. Seek formal training.
- 8. CLEANING: Never use gasoline or other flammable liquids to clean the nailer; vapors in the nailer/stapler will ignite by a spark and cause it to explode.
- MAINTENANCE: Always disconnect air from the nailer/stapler when servicing or installing nails. During maintenance, a nailer/stapler connected to air may fire accidentally, causing serious personal injury.
- 10. CHECK VALVE: Do not use a check valve or any other fitting that allows air to remain in the tool after it is disconnected from the air source.

AWARNING

Read the manual before operation. Become familiar with this nailer/stapler, its safety instructions, and its operation before beginning any work. Serious personal injury may result if safety or operational information is not understood or followed.

Operating this nailer/stapler can propel objects into the air, causing immediate eye damage. To protect yourself, always wear American National Standards Institute (ANSI) approved safety glasses or goggles when operating this equipment. In addition, this nailer/stapler discharges at up to 85-90 decibels. To protect your hearing, always wear ANSI approved ear protection when operating this tool.

AWARNING

Never point this nailer/stapler at yourself or another person! Always pay attention to the direction this nailer/stapler is pointed. Use these tools with respect and caution to lessen the possibility of operator or bystander injury. Ignoring this warning may result in serious personal injury.

ACAUTION

Nailer/stapler accidents routinely happen while moving the gun to another location, such as up ladders, to another room, or even another job site. Always disconnect the gun immediately after use and never transport the gun while connected to the air—even if the air compressor is disconnected from its power source!

ACAUTION

No list of safety guidelines can be complete. Every shop environment is different. Always consider safety first, as it applies to your individual working conditions. Use this and other tools with caution and respect. Failure to do so could result in serious personal injury, damage to equipment or poor work results.

INTRODUCTION

Foreword

The specifications, details, and photographs in this manual represent the Model H8233 as supplied when the manual was prepared. However, owing to Grizzly's policy of continuous improvement, changes may be made at any time with no obligation on the part of Grizzly.

If you have any comments regarding this manual, please write to us at the following address:

Grizzly Industrial, Inc.
C/O Technical Documentation
P.O. Box 2069
Bellingham, WA 98227-2069
E-Mail: manuals@grizzly.com

Most importantly, we stand behind our tools. If you have any service questions or parts requests, please call or write us at the location listed below.

Grizzly Industrial, Inc. 1203 Lycoming Mall Circle Muncy, PA 17756 Phone: (570) 546-9663 Fax: (800) 438-5901

Tool Data

Framing Nailer

Nail Size	1/4" Shank Diameter
Nail Strip Angle	34° Clipped Head
Nail Length	2"–3½"
Magazine Capacity	60 Nails
Air Inlet Fitting	14" NPT
Weight	8½ lbs.
Operating Air Pressure	∍ 80–110 PSI
Maximum Air Pressure	e 120 PSI

Brad Nailer

Nail Size	18 Gauge
Nail Length	11/4"
Magazine Capacity	100 Nails
Air Inlet Fitting	1/4" NPT
Weight	2½ lbs.
Operating Air Pressure	60-100 PSI
Maximum Air Pressure	120 PSI

Stapler

Staple Size	21 Gauge
Staple Length	1/4"-5/8"
Magazine Capacity	120 Staples
Air Inlet Fitting	1/4" NPT
Weight	11 lbs.
Operating Air Pressure	60-100 PSI
Maximum Air Pressure	120 PSI

SETUP

Unpacking

Inventory

Your new nailer/stapler kit was carefully packaged for safe shipping. If you discover any damage after you have signed for delivery, *immediately call Customer Service at (570) 546-9663 for advice.*

Save the containers and all packing materials for possible inspection by the carrier or its agent. Otherwise, filing a freight claim can be difficult.

When you are completely satisfied with the condition of the shipment, you should inventory the contents. After you open the nailer case, you should find the following.

Mo	del H8233 Inventory (Figure 1) Qty
Α.	Tool Oil Bottle 1
В.	Hex Wrenches 3,4,5,7mm 1Each
C.	Safety Goggles
D.	34° Framing Nailer 1
E.	18 Gauge Brad Nailer 1
F.	21 Gauge Stapler1
G.	Carrying Case

Figure 1. Model H8233 inventory.

Compressed Air System

The Model H8233 is designed to be operated at the following air pressures using clean, dry, regulated, compressed air:

Tool	Operating Air Pressure
Framing Nailer	80–110 PSI
Brad Nailer	60–100 PSI
Stapler	60–100 PSI

DO NOT exceed the 120 PSI maximum operating pressure for your nailer/stapler.

Before using your new nailer/stapler, regulate the air pressure to find the optimum setting within the specified operating range. Start by testing the nailer/stapler at a low setting, then increase the air pressure as needed for satisfactory results.

An in-line filter/lubricator/regulator unit can be installed, as depicted in **Figure 2**.

This filter/lubricator/regulator unit will protect your tool from damaging water build-up, allow you to adjust and maintain constant air pressure to your tool, and save you the inconvenience of having to manually lubricate your tool every time you use it.

Exceeding the maximum permissible operating pressure may damage the nailer/stapler and cause it to malfunction. To protect yourself from personal injury, DO NOT allow the air pressure to exceed the recommended pressure for these tools!

Check the current Grizzly catalog for availability of this unit. If you plan on installing a filter/lubricator/regulator unit in your compressed air system, always follow the connection instructions that come with the unit.

Figure 2. Typical filter/lubricator/regulator installation order.

Framing/Brad Nailer Safety Nose Mechanism

A safety mechanism on the nose of the framing/brad nailer protects against accidental firing. When the trigger is pressed, the nailer will not fire until the safety nose mechanism is depressed.

Before you use your nailers for the first time, perform these safety checks to ensure the safety nose mechanisms are operating properly.

Safety Check #1

- DISCONNECT NAILER FROM THE AIR SUPPLY!
- 2. Make sure the magazine is empty and contains no nails.
- Make sure the trigger and the safety nose mechanism move up and down without sticking.
- 4. Connect the nailer to the air supply.
- 5. Without pressing the trigger, depress the safety nose mechanism against a scrap piece of wood that is clean and free of any knots, nails, or other foreign objects.
 - If the nailer does not fire, then the safety nose mechanism is working correctly. Proceed to Safety Check #2.
 - If the nailer does fire when you do this, immediately disconnect the nailer from the air supply and call Grizzly Technical Support at (570) 546-9663 for help.

Note: If you find that the safety nose mechanism is not moving up and down properly, check the lubrication of its sliding components.

Safety Check #2

- Lift the nailer from the scrap piece of wood so that the safety nose is not depressed, point the nailer down and away from yourself and others, then pull the trigger.
 - If the nailer does not fire when the trigger is pulled without the safety nose mechanism being depressed, then the nailer is working properly.
 - If the nailer does fire when you do this, immediately disconnect the nailer from the air supply and call Grizzly Technical Support at (570) 546-9663 for help.

AWARNING

The safety mechanism is a mechanical device that can fail. Never rely on this mechanism as an excuse to point the framing/brad nailer at yourself or any bystanders. Serious injury may occur.

AWARNING

DO NOT attempt to modify or bypass the safety nose mechanism to make the framing/brad nailer fire without pushing the safety nose down.

OPERATIONS

Loading

Framing Nailer

Nail Size	1/8" Shank Diameter
Nail Strip Angle	34° Clipped Head
Length	2"–3½"
Magazine Capacity	60 Nails

To load your framing nailer:

- DISCONNECT NAILER FROM THE AIR SUPPLY!
- Grip the nailer firmly and point the nose down, then pull the magazine pusher back until the catch lever engages, as shown in Figure 3.

Figure 3. Sliding magazine pusher back and engaging catch lever.

Insert a strip or two of nails, pointedend down, into the magazine as shown in Figure 4.

Figure 4. Loading nails into the magazine.

- Tilt the nailer to slide the nails all the way down to the nose.
- With one hand on the magazine pusher for control, release the magazine catch and slowly allow the pusher to press against the nails.

Brad Nailer

Nail Size	18 Gauge
Nail Length	11/4"
Magazine Capacity	100 Nails

To load your brad nailer:

- DISCONNECT NAILER FROM THE AIR SUPPLY!
- Press the magazine latch, as shown in Figure 5, and pull the magazine cover back.

Figure 5. Pressing the magazine latch.

Insert a strip of nails, pointed-end down, into the magazine as shown in Figure 6.

Figure 6. Loading nails into brad magazine.

- **4.** Slide the nails all the way to the nose of the nailer.
- **5.** Push the magazine cover forward until the magazine latch locks it in place.

Stapler

Staple Size	21 Gauge
Staple Length	1/4"-5/8"
Magazine Capacity12	20 Staples

To load your stapler:

- 1. DISCONNECT STAPLER FROM THE AIR SUPPLY!
- Depress the magazine latch lever and slide the magazine pusher back (see Figure 7).

Figure 7. Opening stapler magazine.

Insert a strip of staples into the magazine, as shown in Figure 8, and slide the magazine pusher all the way forward.

Figure 8. Loading staples.

4. Release the magazine latch lever to lock the magazine pusher in place.

Operating

If you have not read the safety instructions in this manual, do not operate the nailer/stapler.

Before you operate your nailer/stapler, place five to six drops of the included oil into the quick connect fitting where the nailer/stapler connects to the air supply.

Framing & Brad Nailer

- Connect the air supply to the quick connect fitting.
- To test for proper nail penetration, hold the nailer perpendicular to the surface of a piece of clean scrap wood that is thick enough for the length of nails you have loaded.
- **3.** Depress the safety nose mechanism against your workpiece.
- 4. Before pulling the trigger, make sure your free hand and other body parts are positioned out of the way of a potential path of a nail in case of deflection.

Deflection is caused when grain irregularities, knots, or foreign objects inside the wood cause the nail to change its path, resulting in the nail puncturing the surface of the workpiece, as shown in **Figure 9.**

Besides damaging your workpiece, deflection can cause injury if your free hand is in the path of the deflecting nail.

Figure 9. Example of nail deflection.

5. Pull the trigger.

Stapler

- Connect the air supply to the quick connect fitting.
- **2.** Place the nose of the stapler firmly against the workpiece.
- Before pulling the trigger, make sure your free hand and other body parts are positioned out of the way of a potential path of a staple in case of deflection.
- 4. Pull the trigger.

Adjusting Framing Nailer Depth

Depending on the type of stock and nails you are using, it may be necessary to adjust the depth of nail penetration for your framing nailer.

To adjust the depth for your framing nailer:

- 1. DISCONNECT NAILER FROM THE AIR SUPPLY!
- **2.** Use a 4mm hex wrench to loosen the cap screw shown in **Figure 10**.
- Move the safety nose away from the nailer body to decrease nail depth, and toward the nailer body to increase nail depth.

Figure 10. Loosening cap screw for depth adjustment.

- Re-tighten the cap screw, then connect the nailer to the air supply and test the nail depth.
- **5.** Repeat **Steps 2–4**, if necessary, until the nail depth is satisfactory.

ACAUTION

DO NOT attempt to adjust the depth on your brad nailer. The nose of the brad nailer is not designed to be adjusted. Doing so could cause the safety nose mechanism to malfunction and cause personal injury.

Clearing Jammed Nails/Staples

A jammed nail/staple must be cleared before using the tool again.

Framing Nailer

To clear a jammed nail from the discharge area:

- DISCONNECT NAILER FROM THE AIR SUPPLY!
- 2. Pull back and latch the magazine pusher.
- Remove the nail stick from the magazine.
- Locate the opening in the underside of the nailer safety nose (see Figure 11).

Figure 11. Nose opening for clearing a iammed nail.

- Remove the jammed nail with a tool that will fit in the slot on the underside of the nose.
- 6. Throw the damaged nail away and insert a new nail stick that only contains clean, undamaged nails. DO NOT use dirty or damaged nails!
- Release the catch lever and slowly let the pusher slide to the front of the magazine.

Brad Nailer

To clear a jammed nail from the discharge area:

- DISCONNECT NAILER FROM THE AIR SUPPLY!
- 2. Pull the magazine back and remove the nail stick.
- Push the latch on the nose guide cover down towards the nose until the catch releases; then remove the nose guide from the nailer, as shown in Figure 12.

Figure 12. Nose guide cover removed from brad nailer.

- **4.** Use needle nose pliers to remove the jammed nail.
- **5.** Replace the nose guide cover, as shown in **Figure 13**.

Figure 13. Brad nailer nose guide cover installed.

6. Throw the damaged nail away and insert a new nail stick that only contains clean, undamaged nails. DO NOT use dirty or damaged nails!

Stapler

To clear a jammed staple from the discharge area:

- DISCONNECT STAPLER FROM THE AIR SUPPLY!
- Unlatch and pull back the magazine pusher, then remove the remaining staples.
- **3.** Remove the jammed staple with needle nose pliers.
- 4. Throw the damaged staple away and insert a new stick of staples that contains only clean, undamaged staples. DO NOT use dirty or damaged staples.

Replacing Pistons/ O-Rings

Under heavy use, a piston, piston shaft, or O-ring may wear out. Replacement is quick and easy. Contact Grizzly Customer Service at (800) 523-4777 to obtain the following Piston Repair Kits or the complete O-Ring Repair Kits.

Repair Kit	Part Number
Framing Nailer:	
Piston Repair Kit	PH8233092
O-Ring Repair Kit	PH8233093
Brad Nailer:	
Piston Repair Kit	PH8233159
O-Ring Repair Kit	PH8233160
Stapler:	
Piston Repair Kit	PH8236151
O-Ring Repair Kit	PH8236152

Always disconnect air from nailer/ stapler whenever servicing! During maintenance, a nailer/stapler connected to air may fire accidentally, causing serious personal injury!

To replace a piston for your nailer or stapler:

- DISCONNECT NAILER/STAPLER FROM THE AIR SUPPLY!
- Remove all nails/staples from the magazine cartridge, and clean the exterior of the tool.

- **3.** Remove the four cap screws on the back of the tool, near the exhaust port.
- 4. Remove the cap.
- The top of the piston should now be visible inside the cylinder, which is housed in the head of the tool.
- Watch the discharge area and push the top of the piston with your finger. You will see the piston shaft slide down the discharge area.
- 7. Taking care not to scratch or dent the nailer/stapler parts, use a wooden dowel or similarly shaped tool to push the piston shaft back inside the tool until you can grip the piston head and remove it from the cylinder. Clean and inspect the parts for cracks, wear, or burrs.
- **8.** Apply a thin film of tool oil on the new O-ring and place it on the new piston.
- 9. Insert the new piston in the cylinder. Make sure that the grooves on the piston shaft line up with those on the guide at the bottom of the cylinder. The new piston should easily slide into the cylinder. DO NOT force the piston into the cylinder! If the piston is not easily inserted, double-check the alignment of the piston shaft with the grooves on the guide.
- 10. After the piston is inserted correctly, close the magazine. Replace the rear cap assembly and secure it with the four cap screws removed in Step 3.

Note: For more assistance, or to install a complete O-ring set, refer to the appropriate breakdown diagram in the back of this manual for component locations.

CLEANING & LUBRICATION

Cleaning

Use non-flammable solvent to clean the nose assembly of the nailer/stapler. Always be sure that the tool is dry before using it again.

Do not allow dust, chips, sand, etc. into the air connectors or into the body of the nailer/stapler; this may result in leaks and damage to the nailer and the air couplings.

Never clean this tool with gasoline or other flammable liquids. Vapors in the tool may ignite, causing the tool to explode. Ignoring this warning may lead to serious personal injury or even death!

Lubricating

Standard pneumatic tool oil has been included with your new Grizzly nailer/stapler to help maintain its useful life. Place two to six drops of oil in the tool air inlet (as shown in **Figure 14**) before every use, or after 2 hours of continuous use.

Wipe off any excess oil near the exhaust port to avoid dust build-up. When the oil that was included with the nailer/stapler has been completely used, replace with Grizzly Model G2820 Pneumatic Tool Oil.

Another option to manual oiling would be to install a lubricator in your air compressor line. If your air compressor line already has a lubricator, then regular lubrication of your nailer/stapler will not be necessary. Just make sure there is always oil in the lubricator.

Figure 14. Lubricating nailer/stapler via air inlet.

TROUBLESHOOTING

Symptom	Possible Cause	Solution
Air leaking at trigger valve area.	O-rings in trigger valve housing are damaged.	O-rings must be replaced & operation of safety nose must be checked.
Air leaking.	 Loose screws in housing. Damaged O-ring(s). Loose air fitting. Damaged housing gasket(s). 	1. Tighten screws. 2. Replace O-ring(s). 3. Tighten air fitting & use teflon tape. 4. Replace gasket(s).
Tool skips nails/ staples while dis- charging.	 Excessive air pressure. Air leaks. Dirt in nose. Dirt or damage prevents nails /staples from moving freely in magazine. Inadequate air flow to tool. Worn O-ring on piston or lack of lubrication. Damaged O-rings on trigger valve. Worn bumper. Cap seal leaking. 	 Reduce air pressure to tool. Tighten screws and fittings. Clean nose. Clean magazine and inspect/repair damage. Check air fitting, hose, compressor & air pressure. Replace piston O-ring. Lubricate. Replace trigger valve O-rings. Replace bumper. Replace cap seal.
Tool runs slowly or has a loss of power.	 Undersized air hose. Nailerstapler is not lubricated. Broken spring in cap assembly. Exhaust port in cap is blocked. Air pressure too low. 	 Use a larger air hose. Lubricate tool. Replace spring. Clean or replace damaged internal parts. Increase air pressure.
Fasteners frequently jam the nailer/stapler.	 Nails/staples are the wrong size. Nails/staples are bent or dirty. Magazine or nose screws are loose. Driver or driver guide are worn or damaged. 	1. Use correct nails/staples. 2. Use undamaged, clean nails/staples. 3. Tighten magazine. 4. Replace worn or damaged parts.
Tool does not fire.	 Tool is not lubricated. Nail/staple is jammed in magazine or discharge area. Piston shaft is damaged. Air pressure too low. 	 Lubricate tool. Clear nail/staple from magazine or discharge area. Replace piston shaft. Check/increase air pressure.

WARRANTY AND RETURNS

Grizzly Industrial, Inc. warrants every product it sells for a period of **1 year** to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly's sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly's liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a "Return Authorization Number," which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.
