Introduction

Thank you for purchasing our fi-6670(A)/fi-6770(A)/fi-6750S series Color Image Scanner.

Scanner Models

This manual covers the following five scanner models, each featuring as:

Model	Description
fi-6670 fi-6670A	Equipped with an automatic document feeder (ADF) for automatic document feeding and duplex scanning. The fi-6670A comes with a color graphics adapter (CGA) board as a standard feature. It enables advanced image processing at a high speed when used with Kofax VRS.
fi-6770 fi-6770A	Equipped with an automatic document feeder (ADF) for automatic document feeding and duplex scanning, and a flatbed for scanning documents such as thin paper or thick books. The fi-6770A comes with a color graphics adapter (CGA) board as a standard feature. It enables advanced image processing at a high speed when used with Kofax VRS.
fi-6750S	Equipped with an automatic document feeder (ADF) for automatic document feeding and simplex scanning, and a flatbed for scanning documents such as thin paper or thick books. The ADF features simplex scanning only.

Manuals

The following manuals are included in the for the scanner. Read them as needed.

Regulatory Information

FCC Declaration

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is located.
- Consult your dealer or an experienced radio/TV technician.

FCC warning: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

The use of a shielded interface cable is required to comply with the Class B limits of Part 15 of FCC rules. The length of the Power cable must be 3 meters (10 feet) or less.

Canadian DOC Regulations

This digital apparatus does not exceed the Class B limit for radio noise emissions from digital apparatus set out in the Radio interference Regulations of the Canadian Department of Communications.

This Class B digital apparatus complies with Canadian ICES-003.

Le présent appareil numérique n'émet pas de parasites radioélectriques dépassant les limites applicables aux appareils numériques de la classe B et prescrites dans le Règlement sur le brouillage radioélectrique dictées par le Ministère des Communications du Canada.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Bescheimigung des Herstellers/Importeurs

Für den fi-6670(A)/fi-6770(A)/fi-6750S wird folgendes bescheinigt:

- In Übereinsstimmung mit den Bestimmungen der EN45014(CE) funkentstört
- Maschinenlärminformationsverordnung 3. GPSGV: Der höchste Schalldruckpegel beträgt 70 dB (A) oder weniger, gemäß EN ISO 7779.

Dieses Gerät wurde nicht für die Benutzung in unmittelbarer Umgebung starker Lichtquellen (z. B. Projektoren) konzipiert.

International ENERGY STAR[®] Program

As an ENERGY STAR[®] Partner, PFU LIMITED has determined that this product meets the ENERGY STAR[®] guidelines for energy efficiency.

The International ENERGY STAR[®] Office Equipment Program is an international program that promotes energy saving through the penetration of energy efficient computers and other office equipment. The program backs the development and dissemination of products with functions that effectively reduce energy consumption. It is an open system in which business

proprietors can participate voluntarily. The targeted products are office equipment such as computers, monitors, printers, facsimiles, copiers, scanners, and multifunction devices. Their standards and logos are uniform among participating nations.

Use in High-Safety Applications

This product has been designed and manufactured on the assumption that it will be used in office, personal, domestic, regular industrial, and generalpurpose applications.

It has not been designed and manufactured for use in applications (simply called "high-safety applications" from here on) that directly involve danger to life and health when a high degree of safety is required, for example, in the control of nuclear reactions at nuclear power facilities, automatic flight control of aircraft, air traffic control, operation control in mass-transport systems, medical equipment for sustaining life, and missile firing control in weapons systems, and when provisionally the safety in question is not ensured.

The user should use this product with adopting measures for ensuring safety in such high-safety applications. PFU LIMITED assumes no liability whatsoever for damages arising from use of this product by the user in high-safety applications, and for any claims or compensation for damages by the user or a third party.

- *1: Where there is no distinction between the different versions of the above operating system, the general term "Windows" is used.
- *2: All the descriptions in this manual assume the usage of Adobe Acrobat bundled with this product. However, Adobe Acrobat may be upgraded without notice. If the descriptions differ from the screens actually displayed, refer to the Adobe Acrobat Help.

Arrow Symbols in This Manual

Right-arrow symbols (⇒) are used to separate icons or menu options you should select in succession. **Example**: Click [Tool] ⇒ [Scan Setting].

Screen Examples in This Manual

The screen examples in this manual are subject to change without notice in the interest of product improvement. If the actual displayed screen differs from the screen examples in this manual, operate by following the actual displayed screen while referring to the user's manual of the scanner application you are using.

The screen examples used in this manual are of FUJITSU TWAIN 32 scanner driver, FUJITSU ISIS scanner driver, ScandAll PRO (which is an image capturing software), and Adobe Acrobat.

Precautions

Liability Note

READ ALL OF THIS MANUAL CAREFULLY BEFORE USING THIS PRODUCT. IF THIS PRODUCT IS NOT USED CORRECTLY, UNEXPECTED INJURY MAY BE CAUSED TO USERS OR BYSTANDERS.

Also, keep this manual in a safe place so that it can be easily referred to during use of this product.

While all efforts have been made to ensure the accuracy of all information in this manual, PFU assumes no liability to any party for any damage caused by errors or omissions or by statements of any kind in this manual, its updates or supplements, whether such errors are omissions or statements resulting from negligence, accidents, or any other cause. PFU further assumes no liability arising from the application or use of any product or system described herein; nor any liability for incidental or consequential damages arising from the use of this manual. PFU disclaims all warranties regarding the information contained herein, whether expressed, implied, or statutory.

Use of Mercury

Lamp(s) inside this product contain mercury and must be recycled or disposed of according to local, state, or federal laws.

To avoid unexpected injuries:

- Do not put the substance contained in the lamp in your mouth as it has mercury.
- Do not breathe the chemical liquid contained in the scanner lamps.
- Do not incinerate, crush, or shred the lamps or scanner parts.

Maintenance

The user must not perform repairs on this scanner. Contact the store where you purchased the scanner or an authorized FUJITSU Image Scanner service provider to make repairs to this product. TOP

Warning Label

HOT warning label:

The glass surface inside the ADF becomes hot during the operation. Be careful not to touch glass surfaces inside the ADF.

To avoid burns, never touch around the area indicated by this label.

Take care not to get your finger(s) caught in the ADF while turning.

You must NOT remove this warning label from your scanner. When it gets old or unreadable by staining or scratches, contact the store where you purchased the scanner or an authorized FUJITSU scanner service provider.

Safety Information

This manual describes important details for users to use this product safely and correctly. Read this manual thoroughly before you start using this product.

Be sure to read and fully understand the Safety Information, in particular.

In addition, keep this manual handy during use of this product, so that you can refer to it quickly when necessary.

Warning Indications Used In This Manual

The following indications are used in this manual to obviate any change of accident or damage to you and/or the product.

This indication alerts operators to an operation that, if not strictly observed, may result in severe injury or death.
This indication alerts operators to an operation that, if not strictly observed, may result in safety hazards to personnel or damage to the product.

A TRIANGLE symbol indicates that special care and attention is required.

The drawing inside the triangle shows the specific caution.

A CIRCLE with a diagonal line inside shows action which users may not perform.

The drawing inside or under the circle shows the specific action that is not allowed.

Outline characters on a colored background show instructions users should follow.

It may also include the drawing that shows the specific instruction.

仏

Do not damage the power cable.

The following are important warnings described in this manual.

Description

A damaged power cable may cause fire or electric shock. Do not place heavy objects on power cable, or pull, bend, twist, heat, damage or modify Power cables.

Do not use any damaged power cables or power plugs, or install any cables or power plugs to loose wall sockets.

Use only specified power cables and interface cables.

Use only specified power cables and interface cables. Failure to use the correct cables might cause electric shock and/or equipment failure.

Do not use the power cable provided with the scanner for other devices, since this might cause equipment failure and other troubles or an electric shock.

Make sure to ground the scanner.

Make sure to ground to avoid electric shock. Be sure to ground before plugging into a power outlet.

Unplug from the outlet before removing the ground connection.

Chapter 1 Scanner Overview

This chapter describes the components of the scanner, showing their names and functions, and explains the basics of how to operate them.

Here, Windows Vista screen samples are used to explain the operations. The screens and operations may differ slightly if the OS that you are using is other than Windows Vista. Take note that, when the FUJITSU TWAIN 32 or FUJITSU ISIS scanner driver is updated, the screens and operations herein may also be slightly different. In such case, refer to the relevant manuals or materials, which are to be supplied when updating the driver.

1.1 Features

This section explains the major features of the scanner.

Features

The scanner has the following features:

Realizes a high-speed scanning of 90 sheets (or 180 pages) per minute under JPEG compression (fi-6670/fi-6670A/fi-6770/fi-6770A only).

The scanner mounts newly-developed high-speed CCD and high-speed image processing circuit. This mechanism has realized a scan speed of 90 sheets or 180 pages (at 200 dpi) per minute. You can perform a batch scanning of about 45,000 sheets per day.

Reduces the work loss caused by multifeeds.

The scanner mounts an ultrasonic multifeed sensor that definitely detects two or more sheets fed simultaneously (this is called a "multifeed"). This feature enables multifeed detection for documents of different thicknesses, sizes, color and/or color density, thus preventing any work loss caused by multifeeds.

Provides the Intelligent Multifeed function.

The Intelligent Multifeed function recognizes paper (sticky notes or labels) of the same size which are glued onto a pre-specified same location of your document.

The function suppresses multifeed detection at this location and continues scanning.

Mounts an adjustable ADF (Flatbed type only).

The scanner is equipped with an adjustable ADF. You can rotate it by 180 degree or slide to a desired position among three, thus saving your installation space.

1.2 Scanner Parts and Their Functions

This section shows you the names of the scanner parts, and briefly describes how they function.

fi-6670/fi-6670A (ADF Type)

ADF (Automatic Document Feeder)

Feeds documents to the scanning position automatically. Documents are fed sheet by sheet when loaded for batch scanning. Both sides of documents can be scanned at one time.

Stacker —

Scanned documents are ejected from the ADF onto this stacker. You can adjust the height of the stacker at lower or upper position. Is removable.

Stacker Extension

Pull out this extension according to the document length.

Stopper

Raise this if the documents loaded are long.

EXT Connector

A connector for connecting to the imprinter option. For details of the imprinter option, refer to the "Imprinter Operator's Guide."

Operator Panel -

 \bigcirc

Comprises a Function Number Display, operating push buttons, and LEDs. Used to operate the scanner and monitor the status.

Two panels are mounted; one each on each side. You can use whichever is convenient for you. The panels are of quick-open type, and can be folded back in place when not used.

- ADF Paper Chute

Holds in place the document pages/sheets that are to be fed into the ADF. Load them with their face down.

Paper Chute Extension

Extended when scanning long documents.

Chute Roller Cover

A cover to prevent your finger(s) from being caught by the Chute Roller.

-Side Guide

Prevents documents from being skewed during feeding. Adjust the guide to the width of the document loaded.

Side Guide Button

Adjusts the position of the Side Guide when kept pressed. Locks the Side Guide at the position when this button is released. TOP Contents

ADF (Automatic Document Feeder)

Feeds documents to the scanning position automatically. Documents are fed sheet by sheet when loaded for batch scanning. The fi-6770/fi-6770A can scan both sides of documents at one time.

Stacker Extension -

Pull out the extension according to the document length.

Stopper _____

Raise it if the documents loaded are long.

Stacker -

Scanned documents are ejected from the ADF onto this stacker. You can adjust the height of the stacker at lower or upper position. Is removable.

Transport Lock

Locks the carrier unit inside the Flatbed during transportation.

Use a coin or similar to unlock it.

Turn the slot to a vertical position to release the lock; to a horizontal position to lock it.

Flatbed

Place them on the glass sheet by sheet for manual scanning. Allows for scanning thick documents such as books.

 \sim

Side Guide Button _____

Adjusts the position of the Side Guide when kept pressed. Locks the Side Guide at the position when this button is released.

- ADF Open Button

Opens the ADF. Push the buttons in to open the ADF.

ADF Paper Chute

Holds in place the document pages/sheets that are to be fed into the ADF. Load them with their face down.

Paper Chute Extension

Extended when scanning long documents.

Chute Roller Cover

A cover to prevent your finger(s) from being caught by the Chute Roller.

Operator Panel

Used to operate the scanner and monitor the status. Comprises a Function Number Display, operating push buttons, and LEDs.

- Side Guide

Prevents documents from being skewed during feeding. Adjust the guide to the width of the documents loaded.

For details of how to scan documents using the [Scan/Stop] or [Send to] button, refer to the FUJITSU TWAIN 32 Scanner Driver Help included in the SETUP DVD-ROM, and the section "Using the Scanner Buttons to Start A Scan Quickly" (on page 106).

Indications on the Function Number Display

Indication	Explanation
8	Blinks only one time upon turning on the scanner.
Ρ	Indicates that the scanner has been turned ON and is being initialized.
1	Indicates that initialization has ended successfully. This status is called "Ready Status" in which you can perform a scan.
J U	Indicates that a recoverable error occurred during scan- ning. "J" or "U" and an "error number" are displayed alternately. For error details, refer to "Temporary Errors" (on page 133). After the error has been resolved, you can return to the Ready Status (see "1" above) by pressing the [Stan/Stop] or [Send to] button.
E F C H A L	Indicates that an abnormality (device error) occurred in the scanner during its initialization or during scanning documents. "E", "F", "C", "H", "A", or "L" and an "error number" are displayed alternately. For details of the errors, refer to "Device Errors" (on page 134). If this error occurs, turn the Main Power Switch OFF and then ON again. If the error persists after this, contact the store where you purchased the scanner or an authorized FUJITSU scanner service provider.

1.4 Turning the Scanner ON and OFF

This section describes how to turn the scanner ON and OFF.

Turning the Scanner ON

The following shows the procedure for turning the scanner ON.

For a SCSI cable connection, be sure to turn on your computer AFTER turning on the scanner, and making sure number "1" indicates on the Function Number Display.

Press the "I" side of the Main Power Switch.

2 Press the [Power] button on the Operator Panel.

 \Rightarrow The scanner is turned on, and the Power LED lights in green.

Note that, while the scanner is being initialized, the Function Number Display changes as follows: "8" ⇔ "P" ⇔ "1", where "1" means the scanner is in the Ready Status.

Use the Main Power Switch to turn the power ON if the Operator Panel power switch has been disabled. For details, refer to "9.7 Settings Related to Power ON/ OFF Control" (on page 188).

Turning the Scanner OFF

The following shows the procedure for turning the scanner OFF.

- Press the [Power] button on the Operator Panel for more than 2 seconds.
 - \Rightarrow The power is turned off and the Power LED goes off.

 If you will not use the scanner for a long time, press the "O" side of the Main Power Switch to turn the power OFF. Then, unplug the scanner from the power outlet.

 Use the Main Power Switch to turn the power OFF if the Operator Panel power switch has been disabled. For details, refer to "9.7 Settings Related to Power ON/ OFF Control" (on page 188). TOP

1.5 Power Save Mode

The Power Save mode is a state in which the powered scanner is kept in a low-powered state if it has not been operated for a certain period of time.

If no operation is performed on the scanner for 15 minutes, the scanner automatically switches to the Power Save mode. In the Power Save mode, the indication of the Function Number Display on the Operator Panel goes out, but the Power LED stays lit in green.

Returning from Power Save Mode

To return from Power Save mode, perform one of the following:

- Load some sheet of paper on the ADF Paper Chute.
- Hit any button on the Operator Panel. Do not press down the [Power] button for more than 2 seconds. This will turn off the scanner.
- Execute a command from the scanner driver.

You can change the time interval for switching to Power Save mode by using the Software Operation Panel. For details, refer to "Setting the Wait Time in Power Saving Mode [Power saving]" (on page 187).

1.6 Basic Flows of Scanning Documents

This section describes how to scan documents using the scanner.

To scan documents with the scanner, a scanner driver and an application supported by the driver are prerequisites. Your scanner is accompanied with two drivers; a TWAINcompliant driver called FUJITSU TWAIN 32 Scanner Driver, and an ISIS-compliant driver called FUJITSU ISIS Scanner Driver; plus an application named ScandAll PRO, which supports both the drivers.

- For details about the scanner drivers, refer to the following:
- "Chapter 4 Scan Parameters" (on page 63)
- FUJITSU TWAIN 32 Scanner Driver HelpFUJITSU ISIS Scanner Driver Help
- For details of ScandAll PRO, refer to the following:
 - "Chapter 3 How to Use ScandAll PRO" (on page 51)
 - ScandAll PRO Help

The flow of scanning documents depends on the interface with which the scanner is connected to your computer. The following provides the two types of scanning flows:

Connection via SCSI/USB Connector 1

Turn the scanner ON.

For how to turn on the scanner, refer to "1.4 Turning the Scanner ON and OFF" (on page 31).

- For a SCSI cable connection, be sure to turn on your computer AFTER turning on the scanner, and making sure number "1" indicates on the Function Number Display.
- Turn off the scanner and your computer first when you switch the interface cable.

2 Load a target document on the scanner.

For how to load documents on the scanner, refer to "Chapter 2 Loading Documents" (on page 38).

3 Launch an application you want to use for scanning. The following steps show example windows when ScandAll PRO is selected.

When ScandAll PRO is launched:

2.1 Loading Documents on the ADF

This section describes how to load documents on the ADF.

- Refer to "2.2 ADF-Loaded Documents" (on page 42) for information about the required document sizes and paper quality for ensuring correct operation when scanning documents from the ADF.
 - Refer to "2.3 Changing the ADF Position (Flatbed Type Only)" (on page 48) for how to change the ADF position (Flatbed type only).
- Align the edge of your document.
- 1 Confirm that all the document sheets have the same width.
- 2 Check the number of sheets in the document stack.

The following is a guideline for the limits on loadable sheets:

- A4/Letter-size paper or smaller that makes a document stack of 20 mm (0.79 in.) or less (200 sheets with paper weight of 80 g/m² (21 lb))
- A4/Letter-size paper or larger that makes a document stack of 10 mm (0.39 in.) or less (100 sheets with paper weight of 80 g/m² (21 lb))

For details, refer to "Maximum Document Loading Capacity" (on page 44).

- 2 To avoid sticky edges, fan the document as follows:
 - 1 Hold both ends of the document, and bend the document stack into an arch.

2 Firmly holding the document with both hands, bend it back so that the bent section rises up in the middle of the document as follows.

- 3 Repeat Steps 1 to 2 twice or three times.
- 4 Turn the document stack by 90 degree, and then fan it in the different orientation again.
- 5 Align the edge of the document.

For details of how to fan documents, refer to the Error Recovery Guide.

You can find the Error Recovery Guide in the SETUP DVD-ROM. For how to install the Error Recovery Guide, refer to "Chapter 4 Installing the Scanner Software" in the Getting Started.

3 Load the document on the ADF Paper Chute. Load it face down on the ADF Paper Chute.

For how to load documents with tabs or non-rectangular documents, refer to "Loading Documents with Tabs or Non-Rectangular Documents" (on page 45).

According to the length of your document, slide the Paper Chute Extension out from the ADF Paper Chute up to the position where the document can be fully supported.

- Place one card at a time on the ADF Paper Chute.
- It is recommended that the front side of the card be placed face down in the ADF.
- Place the card in the following orientation (portrait).

Place face down.

 Cards to be scanned should satisfy: ISO7810 type ID-1 type compliant card Size : 86 mm (height) x 54 mm (width) (3.39 in. x 2.13 in.)

Thickness : 0.76 ± 0.08 mm (0.030 ± 0.003 in.) Material : Poly vinyl chloride (PVC) or Polyvinyl chloride acetate (PVCA)

Before scanning your card, test with a dummy card of the same material to see if it can be fed into the ADF properly.

- Embossed cards cannot be scanned.
- Cards that are excessively rigid or stiff may not feed smoothly.
- Clean off greasy finger prints if any from the surface of your card before scanning.
- Cards cannot be scanned when the imprinter is installed.

Adjust the Side Guides to the width of the document. Slide the Side Guides so that they will touch both sides of the document tightly.

Any gap between the Side Guides and the document edges may make the scanned images skewed.

- Remove paper clips or staples from the document. If a multifeed or mis-picking occurs, reduce the number of the document in the ADF Paper Chute.
- When loading a small document, be careful not to touch the hood for the Chute Roller during scanning. Doing so may let the hood open, which may catch your finger.
- **5** Pull out the Stacker Extension to the length of the document, and then raise the Stopper to stop the document.

Sizes

- A : 53 mm (2.09 in.) to 297 mm (11.69 in.)
- B : 74 mm (2.91 in.) to 431 mm (16.97 in.) (*1)
 - *1: Up to 3 m (118.11 inches) of documents can be scanned when "Long page" is selected in [Scan Type].

Paper Quality

Paper Types

The following types of paper are recommended as the scannable documents:

- Woodfree paper
- Wood containing paper

For documents of paper types other than the above, check if they can be scanned; test with a few dummy sheets of the same paper type before scanning the actual document.

Paper Thicknesses

Paper thickness is expressed by "paper weight." The paper thicknesses allowable for scanning on this scanner are as follows:

- A4/Letter size or smaller : 31 g/m² to 209 g/m² (8.3 lb to 56.1lb)
- Size larger than A4/Letter : 52 g/m² to 209 g/m² (14.0 lb to 56.1 lb)
- A8 size : 127 g/m² to 209 g/m² (34 lb to 56.1 lb)

Precautions

The following types of documents may not be scanned successfully:

- Documents of non-uniform thickness (e.g., envelopes and photo-attached documents)
- Wrinkled or curled documents •
- Folded or torn documents
- Tracing paper
- Coated paper
- Carbon paper
- Photosensitive paper
- Perforated documents
- Documents that are not square or rectangular
- Very thin documents
- Photographs (Photographic paper)

You must not scan the following types of documents:

- Paper-clipped or stapled documents
- Documents on which the ink is still wet
- Documents smaller than A8 size
- Documents wider than A3 size (297 mm or 11.69 in.)
- Documents other than paper such as fabric, metal foil, or transparencies
- · Important documents such as certificates and cash vouchers that must not get scratched or become smeared

When scanning a semi-transparent document, slide the [Brightness] bar to light to avoid bleed through.

- To prevent the rollers from becoming dirty, avoid scanning documents containing large areas written or filled with pencil.
- When using the ADF, the leading edge of all document sheets must be evenly aligned. Make sure that curling at the leading edge is within the following tolerances:

Glossarv

Carbonless paper contains chemical substances that may harm the Brake Rollers or paper-feeding rollers (e.g. Pick Rollers) when documents are fed. Pav attention to the followina:

Cleaning :

If document jams occur frequently, clean the Brake Rollers and the Pick Rollers. For how to clean the Brake and Pick Rollers, refer to "Chapter 6 Daily Care" (on page 114). **Replacing parts**:

The service life of the Brake Rollers and the Pick Rollers for scanning "carbonless paper" may be shorter than that for scanning "wood containing paper."

- The service life of the Brake Rollers and the Pick Rollers for scanning "wood containing paper" may become shorter than that for scanning "woodfree paper."
- The Brake Rollers or Pick Rollers could be damaged if any photos or sticky notes on your document have contact with the Brake Rollers or Pick Rollers during scanning.
- Scanning documents of calendered paper, such as photos, may damage their surface.

Maximum Document Loading Capacity

The maximum number of sheets that can be loaded on the ADF Paper Chute is determined by the size and thickness of document. See the following graph:

Paper thick- ness (Unit)	Conversion										
g/m ² (paper weight)	31	40	52	64	75	80	90	104	127	203	209
lb	8.3	11	14	17	20	21	24	28	34	54	56.1
kg	26.7	35	45	55	64.5	69	77.5	90	110	174	180

- The paper weight available for a size larger than A4/Letter ranges from 52 g/m 2 to 209 g/m 2 (14.0 lb to 56.1 lb).
- The paper weight for A8 size ranges from 127 g/m² to 209 g/m² (34 lb to 56.1 lb).

Area Not to be Perforated

When using the ADF, a document error might occur if there are punched hole(s) in the blue-shaded area as in the following figure. When using the flatbed-type scanner, you should scan such a document through its flatbed.

Loading Documents with Tabs or Non-Rectangular Documents

To scan a document with a tab attached at its bottom or a nonrectangular document, place it on the scanner so that its tab or clipped section will be fed last through the ADF.

Good Example:

- Ex: Non-rectangler document
- If scanning a document as in the bad example above, the indicated section may be caught during feeding. This might cause a paper jam or make the document torn.
 - If the non-rectangular section or tab of the document (see the figures above) is off the paths of the two Feed Rollers inside, it will not be fed properly. As a result, this part will remain in the ADF, and make the scanned image elongated accordingly.

Multifeed Detection Conditions

A multifeed refers to an error that occurs when more than one sheet of paper is fed into the ADF at the same time. There are three modes to detect multifeeds: document overlapping, document length, and both document overlapping and length. The following conditions must be satisfied in each of these detection modes.

Detection By Document Overlapping

- Load sheets of the same thickness on the ADF at a time.
- Document paper weight: of 31 g/m² to 209 g/m² (8.3 lb to 56.1 lb) (0.04 mm to 0.26 mm or 0.002 in. to 0.010 in.)
- Punched holes are not allowed within 35 mm (1.38 in.) of the vertical center line of document.
- Do not glue separate paper within 35 mm (1.38 in.) of the vertical center line of document.

Detection By Document Length

- Load sheets of the same length on the ADF at a time.
- Document length deviation: 1% or less
- Punched holes are not allowed within 35 mm (1.38 in.) of the vertical center line of document.

Detection By Document Overlapping and Length

- Load sheets of the same thickness and same length on the ADF at a time.
- Document thickness: 31 g/m² to 209 g/m² (8.3 lb to 56.1 lb) (0.04 mm to 0.26 mm or 0.002 in. to 0.010 in.)
- Document length deviation: 1% or less
- Punched holes are not allowed within 35 mm (1.38 in.) of the vertical center line of document.
- Do not glue separate paper within 35 mm (1.38 in.) of the vertical center line of document.

Appendix

Multifeed detection by document overlapping will often misdetect very thick paper or media such as plastic cards. When scanning documents like this, disable Multifeed Detection.

V

Ŋ

Some document types and/or some document conditions may cause the multifeed detection rate to drop. Multifeed Detection is not available in the area about 30 mm (1.18 in.) from the leading edge of document.

Limiting the Background Color Area

The area from the leading edge to 3 mm (0.12 in.) down in the scanning area must be in white color (as the document background color).

If [White Level Follower] is enabled, the following blue-shaded area must be either in a color that is the same as the document background color, or in the color to be dropped out. If your document contains any text, frame, or signature in this area, disable [White Level Follower].

For details about [White Level Follower], refer to the FUJITSU TWAIN 32 Scanner Driver Help.

5 Change the position of the ADF.

Slide the ADF until it clicks into place. Make sure that the ADF is firmly locked to the installation position.

The three adjustable positions of the ADF are:

• Traditional (Traditional style set by default)

• Standard (Space-saving type and for right-handed operators) Slide the ADF to the center of the scanner.

• Reversed (Space-saving type and for left-handed operators) Slide the ADF to the center of the scanner, and then rotate it counterclockwise by 180 degree.

	 Be careful not to get your fingers pinched while sliding the ADF. Do not rotate the ADF by more than 180 degree. Doing so may damage the ADF.

Chapter 3 How to Use ScandAll PRO

The following explains how to scan documents with the scanner using ScandAll PRO.

Here, Windows Vista screen samples are used to explain the operations. The screens and operations may differ slightly if the OS that you are using is other than Windows Vista. Take note that, when the FUJITSU TWAIN 32 or FUJITSU ISIS scanner driver is updated, the screens and operations herein may also be slightly different. In such case, refer to the relevant manuals or materials, which are to be supplied when updating the driver.

Introduction

Scanner Overview

3.1 Overview of ScandAll PRO

ScandAll PRO is software for scanning images, which conforms with both the TWAIN and ISIS standards. In ScandAll PRO, you can use the FUJITSU TWAIN 32 or FUJITSU ISIS scanner driver, or VRS's ISIS interface to read scanned document data as images.

For details about the features of ScandAll PRO, refer to the ScandAll PRO Help.

ScandAll PRO mainly features:

- Supports both the TWAIN and ISIS standards.
- Allows you to specify scan parameters, file format, and destination to save the file before scanning by batch process.

Such settings details can be saved as profiles.

- Allows for editing of scanned image data, such as rotation, reversion, deskewing, sorting, page-insertion, and pagedeletion, etc.
- Displays multiple files side-by-side, allowing you to browse them at one time for comparison.
- Outputs both color and binary (monochrome) images simultaneously by one-time scan.
- Inputs and outputs files in bitmap, JPEG or TIFF format.
- Directly outputs scanned images to PDF files or PDF/A files. Creates searchable PDF files and high-compression PDF files as well.
- Saves scanned image data automatically to a specified FTP server or Microsoft SharePoint Server when linked with that server.
- Sends scanned images as attached files when linked with an e-mailer.

- Allows for batch scan operations with a Hot Key on the Keyboard.
- Allows for batch scan operations with the [Scan/Stop] and [Send to] buttons on the scanner by assigning events to them.
- Divides a document and stores divided parts in several folders separately using patch codes or barcodes.
- Recognizes text in the pre-specified zone in the scanned image and outputs it to a file (Zone OCR function).

3.3 Selecting a Scanner Driver

ScandAll PRO comes with two scanner drivers: FUJITSU TWAIN 32 and FUJITSU ISIS.

As both of them are supported by ScandAll PRO, you can use either driver according to your preferences.

This section explains how to switch the scanner driver (TWAIN or ISIS) to use in ScandAll PRO.

- In ScandAll PRO, "TWAIN" is selected by default.
- For functional details of the FUJITSU TWAIN 32 scanner driver, refer to the FUJITSU TWAIN 32 Scanner Driver Help.
- For functional details of the FUJITSU ISIS scanner driver, refer to the FUJITSU ISIS Scanner Driver Help.
- Select the [Tool] menu ⇔ [Preferences]. \Rightarrow The [Setup] dialog box appears.

2 On the [Scan] tab, under [Device Driver], select either of the drivers.

3.4 Selecting a Scanner Model

Selecting the scanner to use in ScandAll PRO is a must before scanning the actual documents.

The following explains how to select the scanner.

- Select the [Scan] menu ⇒ [Select Scanner].
 ⇒ The [Select Scanner] dialog box appears.
- 2 Select a scanner you want to use, and click the [Select] button.

Select the scanner model name that you connected to your computer. Note the indication of the scanner model name depends on the scanner driver selected.

Scanner Model		FUJITSU TWAIN 32	FUJITSU ISIS

Introduction

3.6 Scanning Approaches

With ScandAll PRO, you can scan documents through your scanner. The two following approaches are available:

Scanning with [Scan]

Each time you scan documents, you may need to configure new settings as necessary, such as the file format, saving destination, and scan parameters.

Use the [Scan] option when you want to scan documents on a single-shot basis.

For details, refer to "3.7 Scanning with [Scan]" (on page 58).

Scanning with [Batch Scan]

You can create a "profile" that holds predetermined settings such as the file format and saving destination, scan parameters, image processing properties, and the application to link with. According to the profile selected, the scanner automatically scan documents.

You can create more than one profile beforehand, so you do not have to configure new settings every time you scan documents. You only need to switch between profiles.

The [Batch Scan] option is useful in a case where you want to scan a large volume of documents under a particular condition.

For details, refer to "3.8 Scanning with [Batch Scan]" (on page 61).

With Batch Scan, you can save various settings as profiles beforehand and then scan documents by using such profiles.

Creating and Editing Profiles

Select the [Scan] menu ⇔ [Batch Scan Settings]. ⇒ The [Batch Scan Settings] dialog box appears.

2	 Do the following as necessary: To create a new profile: Click the [Add] button. ⇒ A new profile appears in the [Profile Editor] dialog box.
	 To create a new profile based on an existing profile: Select a profile you want to change settings for, and click the [Copy] button. ⇒ The profile you selected from the profile list is displayed as a
	 new profile in the [Profile Editor] dialog box. To change the settings of an existing profile: Select a profile you want to change settings for, and click the [Edit]
	button. \Rightarrow The selected profile appears in the [Profile Editor] dialog box.
	 To delete an existing profile from the profile list: Select a profile you want to delete, and then click the [Delete] button. ⇒ The selected profile is deleted.
	The profile showing "Template" at [Type] in the dialog box is a default sample profile. It cannot be used for actual scanning. Use this profile as the base of new profiles.

4.1 FUJITSU TWAIN 32 Scanner Driver

The FUJITSU TWAIN 32 scanner driver is a driver software product that complies with the TWAIN standard. You can use this driver to perform a scan using a TWAIN-supported scanning application.

Usually, you first invoke a required scanner driver from the scanning application and configure your scanning settings in the scanner driver's setting dialog box. (Depending on the application settings, this setting dialog box may not appear.)

V

use.

How to invoke a scanner driver depends on the scanning application you use. For details, refer to the manual or help of the application you

TWAIN driver. Press [F1] key to show help.		Data Size about: 1.1MB

In the FUJITSU TWAIN 32 scanner driver, you can configure various scan settings in the dialog box above. For the major scan parameters, see the description below. For details, refer to the FUJITSU TWAIN 32 Scanner Driver Help.

Resolution

Specify a resolution for scanning images.

You can select a value from the predefined standard resolutions in the drop-down list. If a desired value is not listed, you can select [Custom] to specify the value (in increments of 1 dpi from 50 to 600 dpi).

By marking the [Predefine] checkbox, you can select one of three predefined settings, [Best], [Better], and [Normal], and this allows you to scan documents simply and quickly. You can also customize the values of [Best], [Better], and [Normal] as desired in the window that appears when the [...] button is clicked.

Scan Type

Specify the side(s) of document to scan.

The specifiable scan types are as follows:

- ADF (Front Side)
- ADF (Duplex) (fi-6670/fi-6670A/fi-6770/fi-6770A only)
- ADF (Virtual Duplex) (fi-6750S only)
- Long page (Front Side)
- Long page (Duplex) (fi-6670/fi-6670A/fi-6770/fi-6770A only)
- Flat Bed (flatbed type only)
- ADF (Back Side) (fi-6670/fi-6670A/fi-6770/fi-6770A only)

Paper Size

Select a desired paper size to scan, from the sizes shown in the list.

You can save up to three paper sizes using the [...] button as your customized settings.

Also, you can change the order of the listings displayed.

Image Mode

You can specify the type of the output image of scanned document.

Mode	Description
Black&White	Documents are scanned in binary (black & white) mode.
Halftone	Documents are scanned through halftone process- ing in binary (black & white) mode.
Grayscale	Documents are scanned in gradations from black to white. In this mode, you can select either [Grayscale] (256) or [4bit Grayscale] (4-bit or 16 grayscale).
SEE (Selectable Edge Enhance- ment)	Documents with line drawings and photographs are scanned using halftone processing, and only the line drawings and text are emphasized. This mode is most suitable for emphasizing only text of documents containing both photographs and text.
Color	Documents are scanned in color mode. In this mode, you can select one out from [24Color] (24-bit color), [256Color] (256 colors), and [8Color] (8 colors).

Chapter 5 Various Documents

This chapter describes how to scan documents in various ways, showing some examples using the FUJITSU TWAIN 32 scanner driver started from ScandAll PRO.

Here, Windows Vista screen samples are used to explain the operations. The screens and operations may differ slightly if the OS that you are using is other than Windows Vista. Take note that, when the FUJITSU TWAIN 32 or FUJITSU ISIS scanner driver is updated, the screens and operations herein may also be slightly different. In such case, refer to the relevant manuals or materials, which are to be supplied when updating the driver.

5.1 Summary

The following lists various ways of scanning and the major applications of the scanner.

Scanning Documents of Different Types or Sizes

- Scanning Both Sides of A Document (fi-6670/fi-6670A/fi-6770/fi-6770A Only) (on page 75)
- Scanning A Large-Size Document or Book (Flatbed Type Only) (on page 75)
- Scanning Documents of Different Widths (on page 76)
- Scanning A Document Longer Than A3 Size (on page 77)

Advanced Scanning

- Excluding Color(s) from Images (Dropout Color) (on page 79)
- Skipping Blank Pages (on page 81)
- Removing Punch Holes from A Scanned Image (on page 82)
- Scanning A Document from the ADF in Manual Loading Mode (on page 84)
- Duplex Scanning Using the ADF Virtual Duplex Function (fi-6750S Only) (on page 85)

Configuring Post-Scan Operations and Handling

- Automatically Correcting Skewed Document Images (on page 87)
- Setting Auto Correction for Document Page Orientations (on page 89)
- Saving Scanned Images in PDF Format (on page 90)
- Dividing Multipage Documents Using Patch Codes (on page 95)

- Dividing a Multipage Document Using Barcodes (on page 97)
- Horizontally Splitting a Scanned Image into Two (on page 100)
- Outputting in Multi-Image Mode (on page 101)
- Setting Auto Detection for Content Colors (Color/ Monochrome) (on page 103)

Customizing the Hardware Settings

- Using the Scanner Buttons to Start A Scan Quickly (on page 106)
- Detecting Multifeeds (on page 108)
- Bypassing Multifeed Detection for a Fixed Format (on page 110)

- 5 Specify a desired paper size from [Paper Size], etc.
- 6 Click the [OK] button. ⇒ The changes made are applied.
- 7 From ScandAll PRO, perform a scan. For how to perform a scan, refer to "Chapter 3 How to Use ScandAll PRO" (on page 51).

Never look into the light source directly during scanning.

- Do not move the document during scanning.
- For a document of up to A3 or Double Letter size, be sure to close the Document Cover before scanning.

 that only documents of the same width be scanned at one time.
 To prevent images from being skewed, select [Automatic Page Size Detection] from the [Automatic Size and Skew Detection] drop-down list. For how to configure the settings, refer to "Automatically Correcting Skewed Document Images" (on page 87).

Scanning Documents of Different Widths

following the procedure below.

When you scan documents of different widths, scan them,

When you scan documents of different widths at one time from the ADF, some documents that are small in paper size may be skewed or may not be fed into the scanner. It is recommended

2 Center all the document sheets as shown in the figure below.

Inside the opening of the ADF is a Pick Roller, which picks and feeds documents into the ADF. Therefore, off-center documents, if out of contact with the Pick Roller, cannot be fed into the scanner. **3** Place the whole document on the ADF Paper Chute, and then adjust the Side Guides so that they lightly touch the widest sheets of the document.

When loading a small-size document on the ADF Paper Chute, be careful not to touch the hood for the Chute Roller. Touching the hood during scanning opens it, and may catch your finger in.

4 From ScandAll PRO, perform a scan. For how to perform a scan, refer to "Chapter 3 How to Use ScandAll PRO" (on page 51).

Scanning A Document Longer Than A3 Size

Load a target document on the ADF Paper Chute. For how to load documents on the ADF Paper Chute, refer to "2.1 Loading Documents on the ADF" (on page 39).

When scanning a document longer than A3 size, pull out the Paper Chute Extension and the Stacker Extension to their maximum. Here, do not raise the Stoppers.

2 Start up ScandAll PRO, and then open the [TWAIN Driver (32)] dialog box.

For how to open the [TWAIN Driver (32)] dialog box, refer to "Chapter 3 How to Use ScandAll PRO" (on page 51).

3 Select [Long page (Front Side)] or [Long page (Duplex)] from [Scan Type].

Select [Long page (Front Side)] for single-sided scanning; [Long page (Duplex)] for double-sided scanning.

5.3 Advanced Scanning

Excluding Color(s) from Images (Dropout Color)

You can select a color from primary colors (red, green, and blue) to remove (drop out) from a scanned document image. For example, when you scan a document containing black text with green background, you can output an image of only black text.

Example: When "green" is selected to be dropped out

Note the dropout color can be specified only in binary (black & white) or grayscale mode.

- 1 Load a target document on the scanner. For how to load documents on the scanner, refer to "Chapter 2 Loading Documents" (on page 38).
- 2 Start up ScandAll PRO, and then open the [TWAIN Driver (32)] dialog box.

For how to open the [TWAIN Driver (32)] dialog box, refer to "Chapter 3 How to Use ScandAll PRO" (on page 51).

3 Click the [Advance] button.

 \Rightarrow The [Advance] dialog box appears.

4 Select a color you want to remove, from the [Dropout Color] drop-down list under [More].

Skipping Blank Pages

Blank pages (white or black paper) included in your document are detected and removed automatically before scanning. For example, when scanning both double-sided and single-sided documents together in duplex mode, you can obtain the scanned document images with blank pages removed from the single-sided document scanned.

- Load a target document on the ADF Paper Chute. For how to load documents on the ADF Paper Chute, refer to "2.1 Loading Documents on the ADF" (on page 39).
- Start up ScandAll PRO, and then open the [TWAIN Driver (32)] dialog box.
 For how to open the [TWAIN Driver (32)] dialog box, refer to "Chapter 3 How to Use ScandAll PRO" (on page 51).
- **3** Click the [Option] button.

J		Ad <u>v</u> ance
Option	<u>H</u> elp	About
	Data Size	about: 1.1MB

 \Rightarrow The [Option] dialog box appears.

4 Select the [Job/Cache] tab, and then select the [Blank Page Skip] checkbox.

The value displayed to the right of the slider bar shows a noise (dots) ratio(*1). If a scanned page includes dots less than this value, the page is recognized as a blank page.

Scanning A Document from the ADF in Manual Loading Mode

"Manual loading" refers to a user's action to place documents sheet by sheet on the ADF for scanning.

Usually, the scanner stops scanning once it senses no sheet loaded in the ADF. In this manual loading mode, if the scanner judges no sheet loaded in the ADF, it waits for the next sheet to come within a predetermined time interval. If the next sheet is loaded in time, the scanner scans it and waits for the next sheet. If no further sheet is found in time, the scanner stops the scanning.

With this option, you can confirm contents of multiple sheets of your document sheet by sheet before scanning them.

This manual loading is effective when:

- Scanning a document while confirming its contents
- Batch-scanning a document set, which may cause multifeed or paper jam
- Continuously scanning a document set of various shapes or sizes, like clippings of magazines or new papers, that cannot be loaded at once

The procedure is as follows:

- Configure settings in the Software Operation Panel to enable manual loading. For details of the settings, refer to "Timeout for Manual Feeding [Manual-feed timeout]" (on page 186).
- 2 Load the first sheet of a target document on the ADF Paper Chute.

For how to load documents on the ADF Paper Chute, refer to "2.1 Loading Documents on the ADF" (on page 39).

Start up ScandAll PRO to perform a scan. For how to perform a scan, refer to "Chapter 3 How to Use ScandAll PRO" (on page 51).

- ⇒ After the current sheet has been scanned, the scanner waits for the next sheet to load by keeping the rollers on the ADF rotating for the timeout time specified in the Software Operation Panel.
- 4 Load the next sheet on the ADF Paper Chute.

3

- \Rightarrow The loaded sheet is scanned with the same settings configured.
- 5 Repeat Step 4 until no remaining sheet is left.
 - \Rightarrow The scanner terminates the scanning if no paper is loaded on the ADF within the timeout time specified in the Software Operation Panel.
 - Pressing the [Send to] button while the scanner is waiting for the next sheet immediately terminates the scanning.
 - Once the Manual-feed timeout option is enabled, the scanner waits until a sheet to load within a specified timeout time even if you start a scan with no document loaded on the ADF Paper Chute.
 - You may have to replace the consumables more frequently if you often scan documents in this manual loading mode.

Duplex Scanning Using the ADF Virtual Duplex Function (fi-6750S Only)

The ADF (Virtual Duplex) option allows you to scan front-side pages of document first, and then scan back-side pages in succession, and automatically sorts these scanned pages in a correct order.

This option virtually realizes double-sided scanning on the ADF-type simplex scanner model (fi-6750S).

Load a target document face down on the ADF Paper Chute.

For how to load documents on the ADF Paper Chute, refer to "2.1 Loading Documents on the ADF" (on page 39).

2 In ScandAll PRO, specify Duplex Scan mode.

When selecting the "Scan" option

Select the [Perform ADF virtual duplex scanning] checkbox in the [Scan Settings] dialog box.

When selecting the "Batch Scan" option

Display the profile to be used for scanning in the [Profile Editor] dialog box. On the [Scan] tab, select [ADF (Virtual Duplex)] from [Scan Type].

•	 of documents is not automatically detected. With the [Priority] slider control, you can change the accuracy of Automatic Page Size Detection. To give a priority to the scan speed before scanning documents, specify a smaller value. To give a priority to the detection accuracy, specify a larger value. When detecting a paper size of documents to which index sheets, sticky notes or index stickers are attached, specify 2 for the priority. When detecting a paper size of documents whose one side (front or back) is in dark background color, specify 3 for the priority. 	 ⇒ Changes made are saved. 7 From ScandAll PRO, perform a scan. For how to perform a scan, refer to "Chapter 3 How to Use Scand PRO" (on page 51).
Priority	Suited Document Type	
0	Rectangular documents with straight side edges	
1	Documents without tabs (those that have no index sheets, sticky notes, or index stickers)	
2	Documents with tabs (those that have index sheets, sticky notes, or index stickers)	
3	Documents whose one side (front or back) is in dark background	
d •	he Automatic Page Size Detection is not available, if the ocument to scan is one of the following: Thin documents whose paper weight is 52 g/m ² or 14 lb or less	

6

In the [TWAIN Driver (32)] dialog box, click the [OK]

- Non-rectangular documents
- Documents whose margins are filled with dark color

• When [Automatic Deskew] is selected, the paper size

5 Click the [OK] button.

 \Rightarrow You are returned to the [TWAIN Driver (32)] dialog box.

Setting Auto Correction for Document Page Orientations

You can direct the scanner to automatically correct a batch of documents with a mixture of page orientations.

- 1 Load a target document on the ADF Paper Chute. For how to load documents on the ADF Paper Chute, refer to "2.1 Loading Documents on the ADF" (on page 39).
- 2 Start up ScandAll PRO, and then open the [TWAIN Driver (32) dialog box.

For how to open the [TWAIN Driver (32)] dialog box, refer to "Chapter 3 How to Use ScandAll PRO" (on page 51).

3 Click the [Option] button.

 \Rightarrow The [Option] dialog box appears.

4 Select the [Rotation] tab, and then select [Automatic] under [Rotation Degree].

- This function determines a document page orientation based on the characters printed on it. So it may not work properly for the following kinds of documents:
 - Documents with a resolution for scanning not between:

300 dpi and 600 dpi (in Black & White mode) or 200 dpi and 600 dpi (in Color or Grayscale mode)

- Documents with many extremely-large/small characters
- Documents on which the pitches of lines or characters are extremely narrow, or characters are overlapped
- Documents with many photographs or figures and only a few characters
- Documents on which characters are printed in various directions such as drawings
- Documents written only in capital characters
- Handwritten documents
- Skewed documents

- Documents written in a non-supported language. The supported languages are: Japanese, English, German, French, Spanish, Italian, Korean, Traditional Chinese, Simplified Chinese, Russian, and Portuguese
- Documents with uneven colors, design and/or patterns in background
- Documents with intricate design
- Documents with a lot of noise
- To judge text in documents, use a language that is set in Windows's Regional and Language Options.
- The image orientation may not be corrected properly depending on the scanner driver setting at scanning (e.g. dithering).
- If you cannot correct the image orientation properly, use the Edge Emphasis function of the drivers to correct it.
- Shadows may remain on the edge of the scanned image.
- 5 Click the [OK] button.
 - \Rightarrow You are returned to the [TWAIN Driver (32)] dialog box.
- 6 In the [TWAIN Driver (32)] dialog box, click the [OK] button.

 \Rightarrow The settings configured are saved.

7 From ScandAll PRO, perform a scan.

For how to perform a scan, refer to "Chapter 3 How to Use ScandAll PRO" (on page 51).

Saving Scanned Images in PDF Format

You can create PDF data from scanned document images in either of the following two ways:

Creating with ScandAll PRO

ScandAll PRO is recommended for scanning in color or grayscale mode. With ScandAll PRO, you can:

- Reduce the size of PDF data
- Create PDF data with facility

Creating with Adobe Acrobat

Adobe Acrobat is recommended when you want to create PDF data quickly and when you scan documents in black-and-white mode. You can:

- Create PDF data at an original resolution in a short time
- Create PDF data compressed to a desired size by changing compression rates

The file size of color documents increases if scanned by following a general procedure. You can drastically reduce the size if you run Acrobat Distiller before saving.

For details, see the HINT box in Step 10 of the "Creating with Adobe Acrobat" section.

Glossary

• The following options are not available:

- [256 Color] and [8 Color] modes
- [Rotation Degree] specified when [End of Page Detection] is selected
- Long Page Scanning
- Automatic Page Size Detection
- Scanning paper documents with the scanner and converting them into a PDF format with Adobe Acrobat may output unexpected images in the following cases:
- 1 The "Edge Shadow Removal" option enabled in Acrobat, and the "Digital Endorser" or "Black Background" option specified in the FUJITSU TWAIN 32 scanner driver at the same time. In this case, character strings embedded in the image or the background may be lost. Solution 1: In Acrobat, select [File] ⇒ [Create PDF] ⇒ [From Scanner] ⇔ [Image Settings], and set [Edge shadow removal] to [OFF] or set [Color/Grayscale] and/or [Monochrome] under [Compression] to a setting other than [Adaptive]. Solution 2: Adjust the scanning density in the FUJITSU

TWAIN 32 scanner driver.

2 The option(s) [Color/Grayscale] and/or [Monochrome] set to [Adaptive] under [Compression] in Acrobat, and documents scanned at a resolution lower than the recommended value for Acrobat. In this case, inappropriate images may be output.

Solution: Under [Compression], set [Color/Grayscale] and/or [Monochrome] to a setting other than [Adaptive].

3 The "Overscan" option specified in the FUJITSU TWAIN 32 scanner driver to scan documents of Double-Letter size (11x17 in.) or those of A3 size or longer. Such documents may not be scanned properly because scanning of those sizes are not available in Acrobat. Solution: When scanning a Double-Letter sized document (11x17 in.) or an A3-sized or longer document, do not set [Overscan] in the FUJITSU TWAIN 32 scanner driver.

For detailed usage and information on Acrobat, refer to "Create a PDF file from a scanned document" in the Adobe Acrobat Help.

Creating with ScandAll PRO

- Load a target document on the scanner. For how to load documents on the scanner, refer to "Chapter 2 Loading Documents" (on page 38).
- 2 In ScandAll PRO, select [PDF File], [SinglePage PDF File], [PDF/A file], or [SinglePage PDF/A file] to save the scanned document images.

The file format of [PDF file] or [SinglePage PDF file] is saved as a file compatible with Adobe Acrobat 4.0 (PDF 1.3); that of [PDF/A file] or [SinglePage PDF/A file] saved in a PDF/A-lb format (format for an archive of digital documents based on PDF 1.4). Selecting [SinglePage PDF file] or [SinglePage PDF/A file] creates one file per image, and selecting [PDF file] or [PDF/A file] creates one file containing multiple images.

When scanning with the "Scan" option

box.

If you save the scanned document images in Step 8 above, the file size may increase greatly. To reduce the size, retry saving the images, following the procedure below. (It may take more time than you save as usual.) 1 Select [File] ⇔ [Print].

2 In the dialog box below, select [Adobe PDF] at [Name].

- 3 Click the [Properties] button.
 - \Rightarrow The [Adobe PDF Document Properties] dialog box appears.
- 4 Select the [Adobe PDF Settings] tab.
- 5 Select a desired job option from [Default Settings]. Here, for example, select [Smallest File Size].
- 6 Click the [OK] button.
- 7 In the [Print] dialog box, click the [OK] button.
 - \Rightarrow The [Save PDF File As] dialog box appears.
- 8 Specify a desired file name, and then click the [Save] button to save the file.

Dividing Multipage Documents Using Patch Codes

ScandAll PRO supports the Job Separation function using patch code sheets. This patchcode-based Job Separation function can divide scanned images of a multipage document into pre-determined units, and then save them to their respective folders separately, without interrupting the ongoing scanning. A multi-page file such as in PDF or TIFF format can be divided into a specified unit, and each of the parts is saved to separate files.

The procedure is as follows:

Prepare patch code sheets.

The PDF file for use as a patch code sheet comes with two size types (A4 and Letter). Before using the patchcode-based Job Separation function, you need to select the [start] menu ⇔ [All Programs] ⇔ [Fujitsu ScandAll PRO] ⇔ [Patch Code (A4)] or [Patch Code (Letter)], and then print the PDF file of either "Patch Code (A4)" or "Patch Code (Letter)" as many as you need.

- Use white paper to print out the patch code sheets.
- To make photocopies of the printed patch code sheet, make the same size and same density of photocopies as the original patch code sheets.
 - Note that using the same patch code sheets repeatedly may decrease the recognition accuracy due to the dirt contaminated on the sheets. If the patch code sheets are not recognized correctly or get smudged, make new prints of the patch code sheets.
- Operational Settings

Introduction

Scanner Overview

Dividing a Multipage Document Using Barcodes

ScandAll PRO supports the Job Separation function using

barcode-printed sheets. This barcode-based Job Separation

function can divide scanned images of a multi-page document

into a pre-determined unit, and then save each part to respec-

tive folders separately, without interrupting the ongoing opera-

tions. For a multi-page data such as in PDF or TIFF format,

of the parts to separate files. Note not only the document

ScandAll PRO can detect the following types of barcodes:

Ŋ

The following lists the barcode detection parameters:

Item	Parameter
Barcode height	10 mm to 30 mm / 0.39 to 1.18 inches
Barcode length	300 mm / 11.81 inches or less
Barcode margin	5 mm / 0.20 inches or more on each side of barcode
Barcode base color	White (This may not be recognized correctly depend- ing on the hue of white color of the paper scanned.)
Resolution	200 dpi to 600 dpi
Barcode angle	Horizontal and vertical

- If you scan a document having a barcode type that was not defined for this function, the image data could be separated wrongly, and even some of the scanned images may be deleted depending on how the scan settings have been made. To prevent this, check the document carefully in advance to see if it has extra barcodes. It is recommended that you limit the barcode types to sense, and define the area to detect barcodes.
 - Using the same barcode sheets repeatedly may decrease the recognition accuracy due to the dirt contaminated on the sheets. If the barcode sheets are not recognized correctly or get smudged, make new prints of the barcode sheets.
 - Any control characters and/or any illegal characters such as \, /, ,, :, *, ?, ", <, >, and | in a file name are replaced with "_" (underscore).
 - The barcode may not be recognized correctly depending on the document (if skewed), the scanner driver settings and/or the print status of barcodes. Operate after ensuring that the barcode is correctly recognized.

The procedure is as follows:

In ScandAll PRO, create a new batch profile, and then open the [Profile Editor] dialog box.

For how to create a profile, refer to "3.8 Scanning with [Batch Scan]" (on page 61).

2 Select the [Document separator] tab, and then select the [Use Barcode-Based Job Separation Sheet] checkbox.

5.5 Customizing the Hardware Settings

Using the Scanner Buttons to Start A Scan Quickly

You can perform a scan simply by pressing the [Scan/Stop] or [Send to] button on the scanner. To do this, you first need to assign your desired scanning applications to these buttons.

Computer Settings

- Confirm that the scanner is connected properly to your computer, then power on the scanner.
 For how to connect the scanner to your computer, refer to "Chapter 3 Connecting the Cables" in the Getting Started.
- 2 Select the [start] menu ⇔ [Control Panel]. ⇒ The [Control Panel] window appears.
- **3** Select the [Hardware and Sound] icon. \Rightarrow The [Hardware and Sound] window appears.
- 4 Select the [Scanners and Cameras] icon. ⇒ The [Scanners and Cameras] window appears.
- 5 Display the properties of the scanner. Double-click the [fi-6670dj], [fi-6770dj], or [fi-6750Sj] icon.

6 Select the [Events] tab, and then select an event from [Select an event].

The following events can be selected:

- "Scan Button" (when the [Scan/Stop] button is pressed)
- "Send to 1" to "Send to 9" (when the [Send to] button is pressed while a number (from 1 to 9) is displayed on the Function Number Display)

You need to create the required profile beforehand. For how to create profiles, refer to "3.8 Scanning with [Batch Scan]" (on page 61).

13 Click the [OK] button.

14 Exit ScandAll PRO.

When you press the linked button, ScandAll PRO starts up, and a batch scan is executed according to the selected profile's settings.

Scanner Settings

 \checkmark

- When using the [Scan/Stop] button No setting is needed.
 - \Rightarrow Pressing the [Scan/Stop] button starts up the application configured.
- When using the [Send to] button

Press the [Function] button to change a number displayed on the Function Number Display.

When the displayed number and the event number you have selected in Step 5 ("Send to 1" to "Sent to 9") matches, stop pressing the [Function] button.

To perform the event configured with "Send to 2," for example, display [2] on the Function Number Display.

- \Rightarrow Pressing the [Send to] button starts up the application you selected.
 - For details of the Operator Panel, refer to "1.3 Functions of the Operator Panels" (on page 28).
 - Each time the [Function] button is pressed, the number displayed changes as follows: 1, 2, 3, ...9, C, 1, 2, 3,

Detecting Multifeeds

A "multifeed" is a feeding error that occurs when two or more sheets in the ADF Paper Chute are fed simultaneously into the scanner.

You can set the scanner so it will detect multifeeds and display an error message.

To make the scanner to detect multifeeds, change the settings in the scanner driver or in the Software Operation Panel. For how to configure settings in the Software Operation Panel, refer to "Multifeed Detection" (on page 180).

- Load a target document on the ADF Paper Chute. For how to load documents on the ADF Paper Chute, refer to "2.1 Loading Documents on the ADF" (on page 39).
- 2 Start up ScandAll PRO, and then open the [TWAIN Driver (32)] dialog box.

For how to open the [TWAIN Driver (32)] dialog box, "Chapter 3 How to Use ScandAll PRO" (on page 51).

3 Click the [Option] button.

 \Rightarrow The [Option] dialog box appears.

Bypassing Multifeed Detection for a Fixed Format

If you attempt to scan a document sheet with a sticky note, receipt, or photo glued on it while the Multifeed Detection function is enabled, the scanner could mistakenly judge this as a multifeed error and discontinue the scanning. To resolve such a problem, the "Intelligent Multifeed Function" is provided.

There are two modes to this function. In one mode, you can suppress multifeeds forcibly by operating the Operator Panel on the scanner. In the other mode, you can suppress multifeeds automatically by letting the scanner learn the locations and sizes of the sticky note, glued receipt or glued photo beforehand.

Contents

3 Press the [Function] button, and then make sure that the function number blinks faster than before you pressed the [Scan/Stop] button. Otherwise, restart the scanning via the computer.

Note that, from this on, the blinking speed of the function number switches between "slow" and "fast" every time the [Function] button is pressed. According to the mode specified, the scanner operates as explained below if documents are scanned with the function number blinking faster.

- Manual Mode (Bypassing by operator panel buttons) The first sheet of document is scanned without a multifeed error being detected. When the second and following sheets are scanned, multifeed errors are detected based on the settings that have been configured in the Software Operation Panel or in the scanner driver.
- Auto Mode 1 (Bypassing by Document Overlapping and Length) The scanner remembers the length and location of glued paper (overlap pattern) that caused a multifeed error and continues scanning. When glued paper of a similar pattern is detected, the scanner automatically ignores it to suppress multifeed detection. (*1)(*2)
- Auto Mode 2 (Bypassing by Document Length) The scanner remembers the length of the glued paper that caused a multifeed error and continues scanning. When glued paper of the same or shorter length is scanned, the scanner automatically ignores it to suppress multifeed detection. (*2)
- *1: In this mode, up to 32 overlap patterns can be remembered (stored in memory). When the 33rd overlap pattern is detected, the first-remembered pattern is deleted from memory.
- *2: The remembered overlap patterns can be deleted from memory by pressing the [Function] button for 2 seconds or longer while the function number is blinking. After all overlap patterns are deleted, the display indicates "o" (square). By doing so, you can delete all 32 patterns. Be careful not to delete necessary overlap patterns, too.

Chapter 6 Daily Care

This chapter describes how to clean the scanner.

TOP Contents

Index

Introduction

Scanner Overview

Cleaning Materials and Locations Requiring Cleaning 6.1

provider.

Cleaning Materials

Cleaning Material	Part No.	Remarks
Cleaner F1	PA03950- 0352	1 bottle (100 ml) Moisten the cloth with this fluid and wipe the scanner clean. As it may take long before the cleaner vaporizes if a large quantity is used. Dampen a cloth with modest quantities of the cleaner. In addition, wipe off the cleaner completely with a soft lint-free cloth to leave no residue on the surface of the cleaned parts.
Cleaner F2	PA03950- 0353	1 bottle (80 ml) Use this cleaner to clean the Plastic Rollers only.
Cleaning paper	CA99501- 0012	Use this paper together with Cleaner F1.
Cleaning wipe	PA03950- 0419	1 box (24 sheets) Pre-moistened with Cleaner F1, Cleaning Wipes are used instead of moistened cloths.
Swab	Commercial	ly available.
Dry cloth		

Never clean rubber rollers with Cleaner F2. Doing \triangle CAUTION so may deform the rubber.

For details of the cleaning materials, consult the store where Loading **Documents** you bought your scanner or an authorized FUJITSU service How to Use ScandAll PRO Scan Parameters Various **Documents Daily Care** Consumables Troubleshooting Operational Settings Appendix Glossary

Yes : Cleanable

No : Not cleanable

Never clean rubber rollers with Cleaner F2. Doing so may deform the rubber.

The actual cleaning cycle depends on the conditions of the documents scanned. You must clean the scanner more frequently when the following documents are scanned:

- Smooth-faced documents such as coated paper
- Documents with printed text or graphics almost covering the entire surface
- Chemically treated documents such as carbonless paper
- Documents containing a large amount of calcium carbonate
- A large volume of documents written with pencil
- Documents on which the toner is not fused sufficiently

Operational Settings

Appendix

6.2 Cleaning the ADF

As a Guideline, clean the ADF every 10,000 scanned sheets. Note that this guideline varies according to the type of documents you scan. For example, it may be necessary to clean the ADF more frequently if documents are scanned when the toner is not sufficiently fixed on the printout.

When operating the scanner, the glasses inside the ADF become very hot. Before you clean the inside of the scanner, turn off its power and unplug the power cable from the power outlet. Wait for at least 15 minutes for the ADF glasses to cool down.

Cleaning with a Cloth Moistened with Cleaner F1

- 1 Turn off the scanner, and wait for at least 15 minutes. For how to turn off the scanner, refer to "1.4 Turning the Scanner ON and OFF" (on page 31).
- 2 Pushing the ADF Open Buttons, lift open the ADF.

Operational Settings

Brake Roller

Lightly clean the Brake Roller along the grooves on the roller, taking care not to scratch its surface.

When cleaning the Brake Roller, remove it from the scanner. For how to remove the Brake Roller, refer to "7.3 Replacing the Brake Roller" (on page 127).

Lightly clean the Pick Rollers along the grooves on the rollers, taking care not to scratch their surface. Take particular care when cleaning these rollers as black debris on them adversely affects the pickup performance. For how to remove the Pick Rollers, refer to "7.2 Replacing the Pick Rollers" (on page 125).

Roller without grooves

Roller with grooves

Lightly clean the Plastic Rollers, taking care not to damage their surface. Take particular care when cleaning these rollers as black debris on them adversely affects the pickup performance. Be careful not to damage the sponges attached around the middle of the rollers.

Lightly wipe off the roller at the tip of the Pick Arm.

Chute Roller

Lightly wipe off the Chute Roller with its hood open.

Appendix

Feed Rollers

The cleaning procedure is as follows:

1 With the power on, open the ADF when the Operator Panel indicates a code other than "P."

Note that the Feed Rollers will not rotate if you open the ADF and do the following action while "P" is indicated.

2 Hold down the [Send to] and [Scan/Stop] buttons simultaneously on the Operator Panel. The Feed Rollers and Eject Rollers start to rotate by a certain angle.

Both the Feed Rollers and Eject Rollers turn at the same time. Do not touch the Feed Rollers or Eject Rollers during cleaning if they are rotating.

3 Hold a soft cloth moistened with Cleaner F1 against the surface of the rotating Feed Rollers and Eject Rollers so that the cloth wipes off the surface of the rollers lightly. Take particular care in cleaning these rollers as black debris on them adversely affects the feeding performance. As a guideline, seven presses of the [Send to] and [Scan/Stop] buttons together makes the Feed Rollers to rotate one full turn.

7.2 Replacing the Pick Rollers	125
7.3 Replacing the Brake Roller	127

TOP

Index

Introduction

Contents

7.1 Consumables and the Replacement Cycles

The following table shows the consumables and their standard replacement cycles.

Consumable	Part No.	Standard Replacement Cycle
Pick Roller	PA03338- K011	After scanning of 250,000 sheets or one year
Brake Roller	PA03576- K010	After scanning of 250,000 sheets or one year

The consumables must be replaced periodically. Order new consumables before the consumables on the scanner reach the end of their service life. It is recommended that you keep a stock of new consumables. By referring to the numbers of scanned sheets counted at each replacement of the rollers (Brake Roller and Pick Rollers), you can judge when you will need to replace the rollers next time.

If you want to check the counted values for the rollers, refer to "9.3 Settings Related to Consumables and Useful Life Counters" (on page 165). The replacement cycles above are rough guidelines for the case of using A4/Letter-sized woodfree or wood containing paper of 80 g/m² (21.0 lb) in weight. This cycle varies according to the type of the paper used and how frequently the scanner is used and cleaned.

Use only the specified consumables to avoid document feeding troubles.

To purchase the consumables, contact the store where you purchased the scanner or an authorized FUJITSU scanner service provider.

Please understand that some parts may need replacement by service engineer depending on the scanned document type or its duty of scannning. For further information, contact the FUJITSU scanner service provider. Loading

8.1 Paper Jams

If your document jams, follow the procedure below to remove it.

Take care not to get injured when removing the jammed document. Be careful not to get your necktie, necklace, etc. caught in the scanner when removing the jammed document. The glass surfaces and guides may become hot during operation. Take care not to get burned.

- Remove the document sheet(s) remaining on the ADF Paper Chute.
- 2 Pushing the ADF Open Buttons, lift open the ADF.

CAUTION Be careful, the ADF may close and pinch your fingers.

3 Remove the jammed document.

 Staples, paper clips, etc. could cause document jams. Be sure to check for small metal objects on your document or on the paper feed path, and remove them.

Also, before you start scanning, be sure to remove them from the document.

• In case you have scanned any stapled or clipped documents, do not pull them out forcibly. Otherwise, the glasses and/or guides may be damaged.

8.3 Troubleshooting

This section describes troubles that may occur during scanning and how to remedy them. Before you ask for repair, check the following list for possible causes. If the remedies in these flowcharts do not solve the problem, check each item in "8.4 Before Contacting Your Dealer or Scanner Service Provider" (on page 152), and then contact the dealer where you purchased the scanner or an authorized FUJITSU scanner service provider.

9.1 Starting Up the Software Operation Panel

The Software Operation Panel (SOP) is installed together with the scanner drivers (TWAIN and ISIS).

With this application, you can configure various settings for operating the scanner and for managing its consumables.

- Confirm if the scanner is connected correctly to your computer, then power on the scanner. For how to turn on the scanner, refer to "1.4 Turning the Scanner ON and OFF" (on page 31).
- 2 Select the [start] menu
 ⇒ [All Programs]
 ⇒ [Scanner Utility for Microsoft Windows]
 ⇒ [Software Operation Panel].

Cycle for Replacing the Consumables [Useful life counter]

You can change the cycle for replacing the consumables. If the value of the page counter (consumables counter) exceeds a value specified here, the background color of the counter will turn yellow, and a replacing instruction (on page 166) will appear.

- 1 Start up the Software Operation Panel. Refer to "9.1 Starting Up the Software Operation Panel" (on page 156).
- 2 From the tree listing on the left, select [Device Setting 2] ⇒ [Useful life counter].

FUJITSU Software Operation Panel	Pick Rollers Brake Rollers	25 ÷ ×10000 25 ÷ ×10000
Hower SW Control Scan Setting for Document wit Pick Pressure		OK Cancel Apply (<u>A</u>)

3 Specify a value for the life cycle for replacing each consumable (Pick Roller and Brake Roller). You can specify a value ranging from 10,000 to 255,000 in increments of 10,000.

9.4 Settings Related to Scanning

Adjusting the Starting Position for Scanning [Offset/Vertical Magnification Adjustment]

When the position of the scanned image is not correct or the image looks elongated in a vertical direction, use the following procedure to adjust the offset and the scan scale for correction.

The factory default settings are appropriate, so normally there is no need to make any adjustment.

- 1 Start up the Software Operation Panel. Refer to "9.1 Starting Up the Software Operation Panel" (on page 156).
- 2 From the tree listing on the left, select [Device Setting] and then click the [Offset] button.

FUJITSU Software Operation Panel

Eliminating Shadows or Stripes on the Scanned Image Edge [Page Edge Filler]

Depending on the type of document you scan, some shadow of the document sheet edge may be reflected onto its scanned image, and may turn out to be black thin lines on the image. If this is the case, you can improve the output image by using the "Page Edge Filler" function. This function fills the edge portion of the image so that it looks clean.

Start up the Software Operation Panel. Refer to "9.1 Starting Up the Software Operation Panel" (on page 156).

2 From the tree listing on the left, select [Device Setting 2] ⇒ [Paper Edge Filter (ADF)] or [Page Edge Filler (FB)].

FUJITSU Software Operation Panel Diagnosis Device Info Device Setting Device Setting 2 Multiteet Page Edge Filler (FB) Dropout color Pre-Pick Document check area specific Intelligent Multiteed Function Cleaning Cycle Useful life counter AutoCrop Boundary Manual-feed timeout Power SW Control Sean Setting for Document wit Pick Pressue	Left 0 ÷ mm	Top 0 • mm Image: mm Bottom 0 • mm	Right 0 ÷. mm
4 <u>III</u> Þ		OK Canc	el Apply (<u>A</u>)

3 Specify the length for each margin; top, bottom, right, and left, to fill it.

T: Top = 0 to 15 mmB: Bottom= -7 to 7 mm R: Right = 0 to 15 mmL: Left = 0 to 15 mm

T: Top = 0 to 15 mmB: Bottom= 0 to 15 mm R: Right = 0 to 15 mmL: Left = 0 to 15 mm(in 1 mm units)

The specified area is filled with white when the backing (or the background of document) is white, and with black when the backing is black.

 \checkmark

Note that if the target range of the Page Edge Filler is too wide, some characters in the vicinity of the boundary may be cut out.

- Unless otherwise specified, the background color is white. You can also change it to "Black background" using the scanner driver. If you are using the FUJITSU TWAIN 32 scanner driver, do the following to change the backing color to black: Select the [Option] button, and then select [Black background] from [Automatic Size and Skew detection] on the [Rotation] tab.
 - This setting can also be specified from the scanner driver's setting dialog box. Note the setting with a larger value is given a priority.
 - This setting is not applied when Kofax VRS is used.

Scanning with Particular Color(s) Dropped Out [Dropout color]

By using the "Dropout Color" function, you can scan documents with the specified color removed from the light's three primary colors, i.e., red, green, and blue. (This function is available for the binary black and white setting as well as the grayscale setting.)

For example, when you scan a document containing black text with a green background, you can output an image of black text only.

- 1 Start up the Software Operation Panel. Refer to "9.1 Starting Up the Software Operation Panel" (on page 156).
- From the tree listing on the left, select [Device Setting 2]
 ⇒ [Dropout color].

3 Select [Non-rectangular document], [Document with tab], or [Document without tab].

Item	Description
Non-rectangular document	Scan extra 120 mm from the detected bottom edge of the document.
Document with tab	Scan extra 20 mm from the detected bottom edge of the document.
Document without tab	Terminates scanning at the time the bottom edge of the document is detected.

- The scanning speed slows down if [Document with tab] or [Non-rectangular document] is selected.
- When scanning a document with tab or a non-rectangular document, refer to "Loading Documents with Tabs or Non-Rectangular Documents" (on page 45).
- For how to specify "Auto Paper Size Detection," refer to "Automatically Correcting Skewed Document Images" (on page 87).
- When the connection is via SCSI/USB Connector 2, note that:
 - You cannot select [Non-rectangular document].
 - If you scan a document having a tab, which is smaller than A5, the tab image (in part or whole) may be lost.
 - you cannot enable this setting together with [Scan Setting for Document in Dark Background Color]. If you enable this setting, the setting for [Scan Setting for Document in Dark Background Color] will automatically be disabled.

Scan Setting for The Document Whose One Side Is in Dark Background Color [Scan Setting for Document in Dark Background Color]

You can specify whether or not to detect the edge of document in a dark background color during scanning.

You can specify a density of background color so the edge will be detected correctly.

If this option is enabled, the settings for scanning documents with tabs will automatically be disabled.

- Start up the Software Operation Panel. Refer to "9.1 Starting Up the Software Operation Panel" (on page 156).
- 2 From the tree listing on the left, select [Device Setting 2] ⇒ [Scan Setting for Document in Dark Background Color] ⇒ [Enable].

3 Use the slider control to adjust the scanned document output image.

Item	Description
Overcrop	Crops the scanned document image a little larger than the actual size, leaving black background margins outside the image so that the data on the edge of the image will not be lost. The specifiable range is from 0 mm to 3 mm in incre- ments of 1 mm.
Undercrop	Crops the scanned document image a little smaller than the actual size, leaving no black margins on the edge of the image. The specifiable range is from -3 mm to 0 mm in increments of 1 mm.

With the Overcrop option on; if the document you scanned is wide, the black margins outside the document may not be included in the scanned image.

The scanned document output image will not be adjusted if 0 mm has been selected using the slider control.

Adjusting the Paper Picking Pressure [Pick Pressure]

Scanning a thick document at a regular paper picking pressure may force the Feed Rollers of the scanner to spin free without catching the document properly, causing scanning retries.

To avoid this, you can use this option to adjust the pick pressure to scan such documents.

- Start up the Software Operation Panel. Refer to "9.1 Starting Up the Software Operation Panel" (on page 156).
- From the tree listing on the left, select [Device Setting 2]⇒ [Pick Pressure].

3 Specify the pick pressure for feeding your document.

0		
8		

- Scanning thin paper with [High] may cause a paper jam.
- Scanning thick paper with [Low] may not feed the paper properly, just making the Feed Rollers to repeat rotating freely.

- Specifying [High] strengthens the feeding force of the Feed Rollers, feeding hard-to-feed documents quickly.
- The [High] option is effective for scanning relativelythick documents.
- Specifying [Low] can scan even thin, delicate paper. However, if you want to scan such thin document (if not recommended), you must test-scan using a dummy paper of the same paper quality beforehand to prove that the paper can be scanned properly.
- The [Low] option is effective for scanning relativelythin documents.

Settings

Appendix

9.5 Settings Related to Multifeed Detection

Multifeed Detection

A "multifeed" is a feeding error that occurs when two or more sheets in the ADF paper chute are fed simultaneously into the scanner.

If you continue scanning document without knowing this multifeed error, you could skip some of important data while scanning the document.

This scanner has the Multifeed Detection function to prevent such troubles.

With the Multifeed Detection enabled, the scanner indicates an error message and halts the scanning immediately at a multifeed error.

Note that the Multifeed Detection is not available for the range about 30 mm from the leading edge of document.

1 Start up the Software Operation Panel.

Refer to "9.1 Starting Up the Software Operation Panel" (on page 156).

2 From the tree listing on the left, select [Device Setting 2] ⇒ [Multifeed].

3 Select one of the following detection methods.

Detection Method	Description	
None	Does not detect multifeeds.	

180

TOP

Index

Introduction

Scanner Overview

Contents
Detection Method	Description
Check Overlapping (Ultrasonic)	 Detects multifeeds by checking for document overlapping. When this option is selected, the following two more detection options can be set: You can specify the multifeed detection range by the length from the leading edge of document. Go to "Specifying the Multifeed Detection Range [Document Check Area Specification for Multifeed Detection]" (on page 182). If two or more sheets of paper of the same size are stuck on the same position of the document, you can cancel the Multifeed Detection for that area. Go to "Bypassing Multifeed Detection]" (on page 110).
Check Length	Detects multifeeds by monitoring the differ- ence of the document length.
Check Overlapping and Length	Detects multifeeds when both [Check Overlapping(Ultrasonic)] and [Check Length] are selected.
Length	Select 10, 15, or 20 mm as the document length difference, which is to be considered as a Multifeed, when [Check Length] is selected. If the detected document length does not reach the selected length, it will be recognized just as an error, and thus will not be recognized as a multifeed.

	Contents
• When scanning documents of different lengths together in the same stack, select [Checking Overlap-	Index
 ping(Ultrasonic)]. If something like a stamp, memo or photo is glued to 	Introduction
the document, specifying [Checking Overlap- ping(Ultrasonic)] may wrongly detect the glued section as an overlap error. When scanning such a document, select [Checking Length] instead. Note you can also	Scanner Overview

9.6 Settings Related to Wait Time

Timeout for Manual Feeding [Manual-feed timeout]

In Manual Feeding mode where you manually load documents sheet by sheet, you can scan multiple batches of documents continuously as a single file when you load the second stack of document before the timeout time after loading the first batch.

When the time has elapsed, the scanning terminates automatically, canceling manual feeding.

You can cancel the Manual Feeding mode immediately by pressing the [Send to] button within the timeout period specified.

Start up the Software Operation Panel. Refer to "9.1 Starting Up the Software Operation Panel" (on page 156).

2 From the tree listing on the left, select [Device Setting 2] ⇒ [Manual-feed timeout].

3 Select whether to enable or disable [Manual feed timeout]. To enable the timeout setting, select the timeout period for manual feeding until loading the next document after the previous one.

When [Manual feed timeout] is enabled, the scanner waits for the document to be loaded within the specified timeout period, even if scanning starts with no document loaded in the ADF Paper Chute.

Other function		Hardware real-time JPE	G compression		Grayscale/color	Consumabl	

*1 : For scanning with the ADF only. With the Flatbed, there is no minimum size limitation.

*2 : For a document longer than 864 mm or 34.02 inches, you need to specify a resolution of 200 dpi or less.

*3 : Values measured when using the ADF. There is no limit of paper weight when document is scanned with the Flatbed.

*4 : The maximum hardware limitation. Software processing time such as data transfer time is added to the actual scanning time.

*5 : The maximum capacity varies depending on the paper weight. For details, refer to "2.2 ADF-Loaded Documents" (on page42).

*6 : You cannot use both SCSI and USB 2.0/1.1 interfaces at the same time.

*7 : You cannot connect multiple computers to the scanner using each type of interface cables at the same time.

*8 : If you connect the scanner with USB 2.0, it is required that the USB port and the Hub are compliant with USB2.0. The scanning speed may slow down when you connect the scanner with USB1.1.

A.5 Uninstalling the Software

1 Start your computer.

Be sure to log on as a user with "Administrator" privileges.

2 Exit all applications.

- 3 Select the [start] menu ⇔ [Control Panel] ⇔ [Uninstall a program].
 - \Rightarrow In the [Uninstall or change a program] window, you can view a list of installed applications.

Displays may vary depending on the operating system you are using. Follow the on-screen instructions on your desktop.

Windows 2000:

- [Uninstall a program] ⇒ [Add/Remove Applications]
- [Uninstall] or [Uninstall/Change] button
 □> [Add/ Remove] button
 Windows XD:

Windows XP:

- [Uninstall a program] ⇔ [Add or Remove Programs]
- [Uninstall] or [Uninstall/Change] button ⇒ [Change/ Remove] button

4 Select the target application as follows:

- To remove the FUJITSU TWAIN 32 scanner driver, select: [Scanner Utility for Microsoft Windows]
- To remove ScandAll PRO, select: [Fujitsu ScandAll PRO]
- To remove Scan to Microsoft SharePoint, select: [Scan to Microsoft SharePoint]
- To remove the FUJITSU ISIS scanner driver, select: [Fujitsu ISIS Drivers]

- To remove the Error Recovery Guide, select: [Error Recovery Guide for fi-6670(A)/fi-6770(A)/fi-6750S]
- To remove the Software Operation Panel, select: [Software Operation Panel] (Installed automatically when the FUJITSU TWAIN32 and ISIS scanner drivers are installed.)
- To remove the Kofax VRS, select: [Kofax VirtualReScan]
- To remove the manuals, select: [fi-Scanner manuals fi-6670(A)/fi-6770(A)/fi-6750S]
- To remove Quick Scan Pro™, select: [Quick Scan]
- To remove Adobe Acrobat, select: [Adobe Acrobat Standard]
 - For how to uninstall Image Processing Software Option (Trial version), refer to "Image Processing Software Option User's Guide."
- **5** Click the [Uninstall] or [Uninstall/Change] button.
- 6 When you see a confirmation message, click the [OK] button or the [Yes] button.
 - \Rightarrow Upon clicking the button, uninstallation is started.

ADF (Automatic Document Feeder) A unit that allows the user to scan a number of pages consecutively. Fed documents are transported from the ADF paper	Various Documents
chute (or hopper) to the Stacker. Actual scanning operation is executed by the mechanism inside of this unit.	Daily Care
Automatic separation An image processing method in which the scanner automatically detects difference between text and photos, and chooses the threshold accordingly. This function allows the scanner to switch between line mode and half tone mode in one pass.	Consumables
Automatic size/skew detection A function that automatically detects the documents' page size and adjusts output data to the detected page size. Document skewing is automatically detected and corrected for the output image.	Trouble- shooting
	Operational Settings
	Appendix
	Glossary

В

Brake roller

A roller that prevents two or more sheets of paper from being fed simultaneously into the ADF.

Brightness

Refers to the brightness of scanned images in this manual.

С

Canadian DOC Regulations

"A standard issued by Industry Canada, a department of the Canadian government, which sets out the technical requirements relative to the radiated and conducted radio noise emissions from digital apparatus."

CCD (Charged Coupling Device) Image Sensor

A semiconductor device inside the scanner that registers light reflected from the original image and converts it into a digitized (electronic) form. CCD technology is the basis of high-quality image acquisition in scanners, cameras, and other specialized devices.

Color balance

Balance of colors in images.

D

Default settings Pre-set values for optional menus.

Density

Scale of color's depths in images. In this manual, refers to a measurement of the depth of the display.

Dither

The process by which a group of dots is arranged to represent a shade of gray. The predetermined dot pattern simulates shades of gray. This scanning process offers the advantage of reduce memory requirements compared to multilevel gray.

Appendix

Document jam

A warning that appears when document is jammed in the transport unit, or transportation is interrupted because the paper is slipping.

Dpi

Dots per inch. Number of dots lined along one inch. A measurement of resolution normally used for scanners and printers. Higher dpi means better resolution.

Driver software

In this manual, driver software refers to software that allows the scanning application software to communicate with the scanner.

Dropout color

A color which is used in the document but does not appear in the read image.

Duplex reading mode

A mode for scanning both sides of the document in one pass.

Ε

Eject rollers

Rollers that transport documents from the ADF onto the Stacker.

Energy Star

ENERGY STAR is an international standard for energy-efficient electronic equipment. It was created by the US Environment Protection Agency (EPA) in 1992. The standard program has now been adopted by several countries around the world.

Equipment Error

An error that cannot be fixed by the operator. The operator should call the manufacturer for service.

Error diffusion

High-quality halftone (pseudo-grayscale) image production based on black-and-white pixel binarization. A pixel's optical density and that of adjacent pixels are summed, with black pixels relocated in their order of density as they relate to adjacent pixels. The purpose of this technique is to minimize the average error between read and printed densities. Density data for

Troubleshooting

Operational Settings

Appendix

adjacent pixels is modified by diffusing errors on the objective pixel into several pixels, which are then binarized. This maintains high grayscale levels and resolution during reading, while suppressing more patterns by dotted halftone images such as newspaper photographs.

F

FCC

Acronym for "The Federal Communications Commission", an independent United States government agency which is in charge of regulating interstate and international communications via radio, television, wire, satellite and cable. The Part 15 of the FCC regulations mentioned in this manual is designed to prevent harmful interferences on radio communication of radio receivers and other devices which radiate radio frequency energy, and provides for the certification of radio receivers. It also provides the certification of low power transmitters and the operation of certificated transmitters without a license.

Feed rollers

Rollers that feed documents through the ADF.

Filtering

A correction method that improves the read quality of handwritten documents. The read quality of images written in pencil or ball-pointed pen depends on the reflective light characteristics of the specific ink or lead used. Dropped pixels may produce outlines, gaps, or thin, barely connected lines due to uneven optical density. Filtering detects areas lighter than their surround-ings and increases their density to improve image clarity.

Flat bed

An input device of the scanner, where documents are placed and scanned. Generally used for scanning pages out of a book, or paper that is out of the feeding specification of the ADF. Also used to scan a small volume of documents by manual operation.

G

Gamma

A unit of changes of images' brightness. It is expressed as a function of the electric input power to devices (scanner, display, etc.) and an image's brightness. If the gamma rate is larger than 1, the brightness of an image increases and vice versa. In order to adjust the brightness of an image close to the original, generally the gamma value is set to 1.

Gray scale

A method for realizing the gradation from black to white on the scanned image. For example, when scanning monochrome documents, the computer recognizes the documents as sets of black and white dots. In the Gray scale method, each dot contains data regarding density of black. The original gradation of the documents is realized as the gradation of the density data.B

Η

Halftone processing

Any method used to reproduce a photograph which includes a shade as an image composed of dots, namely, a binary image. Dithering and error diffusion processing are examples of halftone processing.

Image emphasis

Density is decreased for lighter but not completely white areas adjacent to black areas. Weakening this emphasis eliminates spot noise or produces softened images.

Image processing

An image is scanned with specified parameters.

Interface

The connection that allows communication from the computer to the scanner.

Inversion (Reverse-image reading)

In reverse-image reading, data is changed from black to white and vice versa.

ScandAll PRO

Contents

Glossary

IPC preset mode

While reading binary images, it is necessary to set the scanner according to the quality of the sheet to be read. In this mode, these settings can be performed in advance by corresponding each setting to a pattern number.

ISIS (Image Scanner Interface Specification)

A standard of API (Application Program Interface) or protocol for imaging devices (scanners, digital cameras, etc.) developed by Pixel Translations, a division of Captiva Software. In order to use imaging devices designed on the ISIS standard, it is necessary to install the driver software of the same standard.

J

Jaggy images

Images that have sharp projections or irregular shape on their edges.

Job separation sheet

A sheet inserted between documents in a batch for separating different jobs.

L

Landscape

A document is transported and read with the Short side parallel to the moving direction.

Landscape orientation

A document is transported and scanned with the long side vertical to the moving direction.

Letter size

A standard paper size used in the U.S.A. and other countries. Paper size is 8-1/2 x 11 inches.

Linedrawing mode

Selecting linedrawing mode makes threshold and contrast settings effective but prevents brightness from being set. The specified threshold value determines whether black or white pixels are scanned. Line drawing mode is therefore appropriate for scanning text and line art images. TOP

Various Documents

Daily Care

Consumables

Troubleshooting

Operational Settings

Appendix

Μ

Mirror image

The read image is symmetrically flipped to produce a mirror image of the original detected in the main scanning direction.

Moire Patterns

Recurrent patterns on scanned images caused by incorrect settings of angles.

Multifeed detection

A scanner function which detects accidental feeding of multiple sheets into the ADF. This can be set as both enabled/disabled.

Ν

Noise removal

Isolated noise from an image appearing as black spots in white areas and voids in black areas is removed to improve image quality. Common noise includes toner and fax particles. Noise reduction works via an algorithm that removes pixels up to 5 x 5 dots appart. A dot is 1/400 inch. A particle can be distinguished from a character as it is not connected to another dot within 5 pixels.

0

OCR (optical character recognition)

Devices or technologies for identifying characters on documents and converting them into text data that can be manipulated. The documents are checked by light and the differences of light reflection are recognized as character shapes.

Operating temperature/humidity

The temperature and humidity levels needed to assure the proper operation of the scanner.

Operator Panel

A panel consists of indicators and buttons. The operator panel is used to control scanner operations such as, selecting features, and changing settings.

Appendix

Optical sensor length of documents. **Outline extraction** The boundary between black and white areas is traced and the outline extracted for closed areas.

Ρ

Pad ASSY (Pad Assembly)

This part is used to separate a sheet of paper from a batch before feeding documents into the ADF. This assembly is made out of rubber.

Photograph mode (White level follower OFF)

Selecting photograph mode makes brightness and contrast settings effective but prevents the threshold from being set. With photograph mode, the darkness of image corresponds to the black-pixel density, making it suitable in scanning images such as photographs having gradations.

Pick roller

Roller(s) that picks the page from the batch of paper in the paper chute and feed it into the ADF.

Pick start time

The period from the manual insertion of the document until picking starts after the document passes the hopper empty sensor.

Pixel (Picture Element)

The tiny dots that make up a scanned image.

Portrait

Orientation of documents or images. Documents/images are set or displayed vertically.

Portrait orientation

A document is transported and read with the long side parallel to the moving direction.

Glossarv

A type of sensor for detecting multi feeding by light transmission. It also detects multi feeding by recognizing differences in

R

Resolution

The measure of the details or grain of images displayed on a computer screen. As a metric of the resolution, dpi is customarily used.

S

SCSI (Small Computer System Interface)

An abbreviation for "Small Computer System Interface". SCSI is a standard for interfaces, used to connect devices such as hard disks, scanners, etc. Up to seven devices can be connected through this interface (daisy chain). The data transfer rates are different between "Fast SCSI" (Max. 10MB/sec.) and "Wide SCSI" (Max. 20MB/sec.).

SCSI-ID

Used to specify a particular SCSI device when the initiator selects a target or the target reconnects to the initiator.

Separation roller

A roller that separates the sheets of paper from each other.

Simplex reading mode

A mode for scanning only the front side of the document.

Smoothing

A process that eliminates "jaggies" from slanted lines and curves. Irregular convexities are deleted and irregular concavities filled in. This is useful in OCR applications, for example.

Storage temperature/humidity

The temperature and humidity levels necessary for proper storage of the scanner.

Т

Temporary Error

An error that can be fixed by the operator.

Terminator

Devices with a SCSI interface can be daisy-chained. A resistor that includes terminal circuits needs to be placed at both ends of the SCSI chain when devices are daisy-chained. If a device (such as a scanner) is the last device in a chain, leaving an interface connector unused, a Terminator therefore must be attached to provide those terminal circuits.

Third Party Interface

Used to install optional board provided by Fujitsu or interface board manufactured by a third party.

Threshold

A value used as a metric for judging a color as black or white. For scanning an image with gray gradation, this value must be defined. The threshold setting determines which pixels are converted to black and which will become white.

ΤÜV

"An institution that controls products for conformity with various standards of security, usability and environmental matters."

TWAIN (Technology Without Any Interesting Name)

A standard for API (Application Program Interface) or protocol for imaging devices (scanners, digital cameras, etc.) developed by TWAIN Working Group. In order to use devices that comply with this standard, it is necessary to install driver software based on the same standard.

U

Ultrasonic sensor

A type of sensor for detecting multi feeding by ultrasonic sound. Scanners detect multi feeding by recognizing differences in the amount of ultrasonic waves that penetrates the documents.

USB (Universal Serial Bus)

An abbreviation for "Universal Serial Bus". A standard for interfaces used to connect devices such as key boards, scanners, etc. Up to 127 devices can be connected through this interface. USB devices can be plugged/unplugged without turning off their power. Data transfer rates are different between the "Low speed mode" (1.5Mbps) and "High speed mode" (Max. 12Mbps).

White level follower

A function to correct the difference between white colors in unbleached paper (e.g. wood containing paper, etc.) and in scanned images.

White Reference Stripe

The white part located in the ADF that defines the lightest area in an image, causing all other areas to be adjusted accordingly.

Numbers

11 x 17 inches

A standard paper size used in the U.S.A. and other countries. Paper size is 11 x 17 inches.
